Yuma Proving Ground hosts major counter-UAS test event

By Mark Schauer

U.S. Army Yuma Proving Ground (YPG) is at the forefront of conducting developmental testing of the equipment that may be used by the future force.

It's importance to this mission was underscored by hosting the Joint Interagency Task Force (JITF)-401 operational experimentation exercise called Falcon Peak 26.2 throughout most of September.

"There is a lot of technology and infrastructure that we are trying to enable," said Hi-Sing Silen, JITF-401 Test Integrator. "We are evolving and we will get there faster."

Conducted in support of U.S. Northern Command and Joint Task Force Southern Border, the exercise assessed counter-unmanned aircraft system (C-UAS) capabilities from multiple vendors against evolving threats. It also established permanent C-UAS test and evaluation lanes at YPG that will support ongoing collaboration among the Department of War, operational units, industry, commercial developers, and defense partners.

U.S. Army Yuma Proving Ground hosted the Joint Interagency Task Force-401 operational experimentation exercise called Falcon Peak 26.2 throughout most of September. Conducted in support of U.S. Northern Command and Joint Task Force Southern Border, the event established permanent C-UAS test and evaluation lanes at YPG that will support ongoing collaboration among the Department of War, operational units, industry, commercial developers, and defense partners. (Photo by Mark Schauer)

"The range is standardizing the spec sheet for each of these three lanes," said Silen. "The goal is to have set standards of measurement so we all have a baseline to start with."

Consisting of lanes for C-UAS technologies that fight the craft through sensors, electronic defeat, or kinetic engagement, vendors put their systems through multiple realistic test scenarios. Since the establishment of

YPG Soldier receives Army Achievement Medal

On Oct. 1, U.S. Army Garrison Yuma Proving Ground Soldier Sgt. Victor Villa received the Army Achievement Medal. Acting Garrison Manager Dan Carter presented Villa with the honor during the Garrison Employee Recognition Ceremony at the Palm Garden. Villa earned the medal for meritorious achievement for his work supporting the Religious Support Office Vacation Bible School. His efforts in coordinating activities, preparing resources, and supporting volunteers ensured a successful VBS for the more than 40 participants. (Photo by Ana Henderson)

Yuma Test Center Commander thanks pilots for support

On Sept. 22, Yuma Test Center (YTC) Commander Lt. Col. Kevin Hicks awarded three pilots with a Commander's Coin for their support of several recent programs at YTC, including Falcon Peak. The pilots from the Alaska Air National Guard are pictured with Hicks and the cactus-shaped coins. From left: CW5 Justin Lindel, Capt. Jared Scheler, and CW3 Bryan Kruse. (Photo by Ana Henderson)

U.S. Army Brig. Gen. Matthew Ross, director of Joint Interagency Task Force-401, toured test sites at Yuma Proving Ground Sept. 22 ahead of the Falcon Peak 26.2 demonstration. At the conclusion of the demonstration, Ross said, "One of the primary benefits of Yuma Proving Ground is its range instrumentation." (Photo by Ana Henderson)

JIATF-401 and NORAD / NORTHCOM conclude Falcon Peak 26.2, establish enduring counter-UAS test lanes

Story by Lt. Col. Adam Scher

Joint Interagency Task Force 401 concluded its operational experimentation exercise, Falcon Peak 26.2, at U.S. Army Yuma Proving Ground, advancing the evaluation of emerging counter-unmanned aircraft systems (UAS) alongside operational warfighters and interagency partners.

Conducted in direct support of U.S. Northern Command and Joint Task Force Southern Border, the exercise provided operational assessments of counter-UAS capabilities against evolving unmanned threats. The event also established enduring counter-UAS testing and evaluation lanes at Yuma Proving Ground to support continued collaboration between the Department of War, operational units and industry.

"Countering the threat of drones is both a warfighting and a homeland defense imperative," said U.S. Army Brig. Gen. Matt Ross, director of JIATF-401. "Unmanned threats will continue to evolve, which increases the risk at home. We conducted Falcon Peak to support Northern Command and Joint Task Force Southern Border, working directly with users in the field to ensure we understand their needs and deliver the best capability on the market."

Throughout Falcon Peak 26.2, participating systems were evaluated against standardized Department of War test criteria. Performance data was consolidated into JIATF-401's centralized data repository to support rapid assessments and inform acquisition decisions.

The dedicated counter-UAS testing and evaluation lanes established during Falcon Peak 26.2 will remain operational at Yuma Proving Ground. This testing capability will allow commercial developers and defense partners to continually evaluate and improve their systems.

"One of the primary benefits of Yuma Proving Ground is its range instrumentation," said Ross. "Industry partners need to know the exact details of how their product performs. By establishing enduring counter-UAS test lanes here, industry does not have to wait for the next iteration of Falcon Peak to improve their systems. Companies can come directly to the range, receive immediate feedback, iterate on their systems, and rapidly deliver improved tools to our service members."

Ross also emphasized the importance of interoperability and continued adaptation as the counter-UAS threat evolves.

"There is no single solution or silver bullet to solve this problem," said Ross. "Counter-UAS systems must function like Lego blocks. By standardizing common protocols and tactical interfaces, we are enabling vendors to plug their capabilities directly into our command-and-control networks. We don't just want to buy finished products. We want to build an enduring ecosystem of industry partners capable of continuous adaptation."

To further connect industry, acquisition authorities, and operational units, JIATF-401 directs commercial developers, defense stakeholders, and warfighters to the Department's centralized counter-UAS marketplace at drones.mil. This platform provides a centralized resource for testing standards, commercial opportunities, and other information intended to connect developers with operational users.

"Our goal is to ensure the limiting factor in defending our nation is never the equipment," said Ross. "By pairing persistent testing lanes at Yuma with the marketplace resources at drones.mil, we are building a continuous pipeline that moves verified, combat-effective C-UAS capabilities from the proving ground into the hands of warfighters at home and abroad."

Clean Air Act and how to stay in compliance

By Donnett Brown

What would you do if Uncle Sam gave you $9.7 million to spend on your program area? Now imagine the Environmental Protection Agency (EPA) takes away $9.7 million from your program. When the EPA levies a fine, it comes out of an installations local budget, not Big Army's. The good news is, with some planning and paperwork, this is all avoidable.

Did you know that Yuma Proving Ground (YPG) has a Clean Air Act (CAA) permit for the entire installation? It includes various sources of air pollution such as generators, boilers, parts, washers, painting, abrasive blasting, dust collectors, construction dust control, fuel tanks, and open burning. The YPG Environmental Sciences Division (ESD) continuously collects runtime and throughput data for all these sources and calculates the quantity of pollutants emitted to the ambient air.

Brian Hoon is Air Manager for U.S. Army Garrison Yuma Proving Ground. The installation holds a Clean Air Act permit for the entire installation and Hoon makes sure its regulations are met. (Photo courtesy of Donnett Brown)

There are strict rules that dictate how much air pollution YPG can emit. For example, generators are subject to specific requirements depending on their size, age, fuel type, and how they are used. Even portable generators can eventually become subject to stationary-source requirements. A portable generator that remains at the same location for more than 12 consecutive months may be considered a stationary engine and may need to be incorporated into YPG's air permit. Replacing it with another generator performing the same or similar function does not necessarily restart the 12-month clock.

So, what does this mean to you? Before purchasing, renting, installing, relocating, or modifying equipment that may produce air emissions, contact YPG ESD. Something that may seem as simple as bringing a generator on site, installing a new parts washer, or adding a paint booth could affect YPG's permit. ESD can determine what requirements apply and complete the necessary paperwork before the equipment is put into operation.

CAA compliance is a team effort. ESD manages the permit, tracks emissions, and submits required reports, but we rely on organizations across YPG to let us know when equipment is added, removed, moved, or modified. Early coordination can prevent compliance problems and costly enforcement actions.

The bottom line is simple: if you are planning a project or bringing equipment onto YPG that could generate air emissions, contact ESD early. A quick phone call and a little paperwork can go a long way toward protecting YPG's mission—and its budget.

After all, wouldn't you rather spend that $9.7 million on the mission than give it to the EPA?

Fostering local partnerships

U.S. Army Yuma Proving Ground Commander Col. Charles Seaberry (center) and Technology and Investments Director Todd Hudson visited the University of Arizona's Yuma-based Center of Excellence for Desert Agriculture on Sept. 29 to discuss the current and future educational needs of the post. Curriculum geared toward the unique requirements of YPG's test officer roles was an area of discussion, as was machine learning and artificial intelligence. The ability to take such training opportunities locally instead of at universities thousands of miles away stretches YPG's training dollars further. (Photo by Mark Schauer)

TEST

FROM PAGE 1

Joint Interagency Task Force-401 by Secretary of War Pete Hegseth in August 2025, U.S. Army Yuma Test Center has been designated as the primary, dedicated interagency Counter-small Unmanned Aerial Systems test and training range.

"We are serving as the blueprint, but this is to be replicated at any Department of War test and evaluation facility or any other range possible," said David Bates, Capability Integrator in YPG's Air Combat Systems Directorate. "The idea is that based on capabilities and location it could be changed."

Beyond being the first Falcon Peak exercise to simulate UAS incursions in the natural environment conditions found at the southern border, Falcon Peak 26.2 was also the first test event to use the autonomous command-and-control software platform Lattice as the baseline standard for evaluating commercial sensor-to-shooter counter-UAS capabilities.

"YPG is the first deployment of Lattice for test and evaluation purposes," said Bates. "There are a lot of lessons learned, especially from a test and evaluation perspective."

The multi-week test event drew attention from national and international media and the highest levels of the Army, culminating in a visit by Acting Secretary of the Army Adam Telle.

"We have got to be the very best at controlling the sky just above our land to ensure our Soldiers, our law enforcement, and our Border Patrol stay safe from drone threats," he said in a social media video recorded at YPG's Castle Dome Heliport. "We can't assume that we are only going to face these threats overseas."

"It really all comes down to fundamentals," added Brig. Gen. Matthew Ross, JIATF-401 Director. "We want simple, reliable systems that work every time. We want to make sure that our Soldiers, Sailors, Airmen, and Marines are trained to use them effectively."

Falcon Peak 26.2 assessed counter-unmanned aircraft system (C-UAS) capabilities from multiple vendors to simulate UAS incursions in the natural environment conditions found at the southern border. (Photos by Mark Schauer)

Since the establishment of Joint Interagency Task Force-401 by Secretary of War Pete Hegseth last August, U.S. Army Yuma Test Center has been designated as the primary, dedicated interagency Counter-small Unmanned Aerial Systems test and training range.

Consisting of lanes for C-UAS technologies that fight the craft through sensors, electronic defeat, or kinetic engagement, vendors put their systems through multiple realistic test scenarios.

VIP visitors flock to Falcon Peak to view demonstration

The concluding demonstration day of the Joint Interagency Task Force-401's operational experimentation exercise, Falcon Peak 26.2 brought distinguished visitors to at U.S. Army Yuma Proving Ground (YPG) on Sept. 24, 2026.

RIGHT: The Acting Secretary of the Army Adam Telle attended the event and met with demonstration participants. (Photo by Ana Henderson)

U.S. Army Brig. Gen. Matt Ross, director of Joint Interagency Task Force-401 arrived at YPG days before the demonstration and toured YPG to get a deeper understanding of its testing and data collection capabilities. (Photos by Ana Henderson)

The U.S. Army Test and Evaluation Command Executive Technical Director/Deputy to the Commander James Amato attended the demonstration and had the opportunity to meet local leaders. (Photo by Ana Henderson)

Zach Huff who serves as the National Security Adviser for U.S. Representative Abe Hamadeh, was also in attendance and had productive conversations with YPG representatives. (Photo by Ana Henderson)

Arizona State Representative Tim Dunn, who represents the people of Legislative District 13, which covers areas of Yuma and Wellton had meaningful conversations with YPG leaders. (Photos by Ana Henderson & Mark Schauer)

On Sept. 30, Acting Garrison Manager Dan Carter and William Lloyd who serves as the Substance Abuse Program Manager, Commander's Ready and Resilient Integrator, Suicide Prevention Coordinator and Employee Assistance Program Coordinator performed the ribbon cutting at the Zen Den. The den is the first of four planned. (Photos by Ana Henderson)

U.S. Army Garrison Yuma Proving Ground's first Zen Den has opened its doors. The room promoting a space to relax the mind and body is located on the Howard Cantonment on the second floor of Building 501. From the main YPG Sharepoint site, select the Garrison tab and scroll down to Internal links and select the Zen Den Scheduler.

YPG's first Zen Den opens its doors...with more planned

By Ana Henderson

Life and work can be stressful. This is where U.S. Army Yuma Proving Ground's (YPG) Zen Den can help. The room provides a relaxing environment where individuals can de-stress.

William Lloyd, who wears many hats at YPG including as the Substance Abuse Program manager, Commander's Ready and Resilient Integrator, Suicide Prevention Coordinator and Employee Assistance Program Coordinator, had the vision to make this room a reality for a long time and finally had the opportunity to make it happen.

"We hope to have one of these in each area, so people can come in. Listen to some mindfulness, relax."

As you walk through the door of the upper floor of Building 501 on the Howard Cantonment, you will smell a fresh aroma. The room is equipped with a reclining massage chair and small lounger to rest on. There's a vintage-looking stereo with modern hook ups to play music from your phone or visitors can play the CD's provided that have mindful music. To de-stress there's a handheld back massager and other equipment to stretch your body. The room also has a white noise machine to drown background noise and plants to complete the ambiance.

Chris Lee Director of Garrison's Human Resources stressed that all the items in the den were sourced at no cost. With plans to create four more Zen spaces across YPG on all cantonments.

EAP clients have had the opportunity to use the room and Lloyd remarked, "It definitely drops their stress."

The Acting Garrison Manager Dan Carter who attended the ribbon cutting for the den on Sept. 30, agreed that the room is a "great innovation" to add to YPG.

The Zen Den is open, to Soldiers, civilians, retirees and family members who have YPG base access. Hours will be 6 a.m. to 4 p.m. To ensure people get alone time in the room, Sharepoint is being used to schedule the room. From the main YPG Sharepoint site, select the Garrison tab and scroll down to Internal links and select the Zen Den Scheduler.

Suicide Prevention Push-Up Challenge winners

U.S. Army Yuma Proving Ground employees showed up in full force for the 2026 Suicide Prevention Push-Up Challenge. Throughout September, the workforce knocked out 171,251 push-ups, a nearly 52% increase over last year. On Sept. 30, YPG's Command Team recognized the effort.

Organization Standings:

1st – CASD 57,220
2nd – M&W 56,739
3rd – NAF 27,953

TOP Males:

1st– Michael Torres – 23,600
2nd –Craig Miller – 20,000
3rd– Hector Magana – 11,450

TOP Females:

1st– Shauna Wells – 15,023
2nd– Amanda Torres – 10,000
3rd– Danielle Compton – 2,500

On Sept. 29 members of the Munitions and Weapons Division performed their push-up, upping their numbers on the last day of the challenge, during a Teams live broadcast alongside the Command Team.
