- M79-6** | The very first question that I asked at each one of the scoping sessions was show me the treaty of annexation that exists between the United States and the Kingdom of Hawai'i which allows you to claim the land.
- M79-7** | The draft EIS does not include that cumulative impact that I talked about from all the pollution that comes over the mountain that's not solely yours. That comes from Dole and Del Monte and Kahi and the Campbell Industrial Park, and the industrial landfill that we have in Nanakuli and the other industrial landfill that's being proposed for Maile. It doesn't take into account all of that stuff that is airborne that we get to breathe, all for the economic benefit of everybody that lives on the other side of that mountain. It's a very important point.

Responses

M79-5

As noted in the air quality discussion of Section 9.2 of the Draft EIS, available air quality monitoring data show few indications that air quality is declining despite continuing development. Peak air pollution levels measured on O'ahu and Hawai'i Island are presented in Table 2 of Appendix G1. The only episodes of peak air pollution levels approaching the federal air quality standards have been the high 24-hour average PM10 levels measured during the New Year period at Pearl City and Kapolei. These events have been attributed to fireworks use, not from military, industrial, or agricultural emission sources.

M79-6

We thank you for your comment and your comment has been considered and included into the administrative record for this process. Hawai'i was adopted as a territory of the U.S. Government in 1900 and was granted admission into the Union in 1959 via Pub L 86-3, 73 Stat 4 when the people of Hawai'i petitioned the U.S. Congress for statehood and adopted by vote in the election held on November 7, 1950 the Act of the Territorial Legislature of Hawai'i entitled "An Act to provide for a constitutional convention, the adoption of a State constitution, and the forwarding of the same to the Congress of the United States, and appropriating money therefore", approved May 20, 1949 (Act 334, Session Laws of Hawai'i, 1949). We understand that some individuals do not agree with or support the formal annexation of Hawai'i in 1898. However, issues of statehood and Hawaiian Sovereignty are outside of the scope of the NEPA process.

M79-7

As noted in the air quality discussion of Section 9.2 of the Draft EIS, available air quality monitoring data show few indications that air quality is declining despite continuing development. Peak air pollution levels measured on O'ahu and Hawai'i Island are presented in Table 2 of Appendix G1. Comments**Responses****M79-8**

The DEIS fails to address adequately pollution in the social justice issues. We talk real dryly about 25 percent more ammunitions being exploded in the additional training that's going to occur. What does that mean? What does it really mean? It doesn't tell us how much is going into the soil to add to whatever is already there, to interact with what's already there. It doesn't say anything about that. It doesn't say -- in the analysis, it doesn't say that Hawaiians spend more time in the dirt, more time planting, more time eating fish, and that those levels of exposure for somebody maybe in Kansas are not the appropriate levels of exposure to be basing your projections on because we do things differently in Hawai'i.

M79-9

The draft EIS tries in a very dry and a very scientific way of looking at the cultural impacts by looking at the impacts on cultural sites, but fails to recognize the cultural sites are not just piles of rocks. The cultural sites are the springs and the wells because all wells started off as springs

M79-10

I see nothing in the draft EIS that talks about protecting the soil, the springs, and the wells from the contamination of those constituents, of those explosions that is sure to enter those water tables

M79-11

There's nothing in here that talks about the potential destruction of mana by a Stryker vehicle inadvertently or advertently running over a cultural site.

M79-8

Please refer to Section 2.2 of the EIS regarding the determination of the project location. Please refer to Section 4.9 of the EIS for discussions regarding soil pollution. Please refer to Section 4.12 of the EIS for a summary and discussions regarding hazardous wastes, and human health and safety hazards' issues. Also, text has been added to Chapter 10 addressing the issue of disproportionate air impacts.

M79-9

We have changed text in the ATI description to better describe that sites do not have to be complex to have meaning. Our surveys have not identified any springs. If springs are identified in the future, the Army will engage in consultation with Native groups or individuals to determine if they are significant.

M79-10

Impacts to soil, springs, and wells and mitigation measures identified to reduce impacts are discussed in Sections 4.8 (Water Resources) and 4.9 (Geology, Soils, and Seismology

M79-11

Chapter 4.11 provides a summary of the impacts to cultural resources from the proposed actions. Sections 5.111, 6.11, 7.11, and 8.11 discuss the impacts at each installation in detail.

Stryker Brigade Combat Team Final EIS, Hawai'i

P-859

M79-12

And finally, the most glaring thing that's missing from this draft EIS is it does not discuss how you're going to clean up the existing stuff or how you're going to clean up the additional 25 percent that you plan to add to the various ranges, to the various pieces of property that you currently control, and you notice how I use the word "control," not own.

M79-13

The fire plan, I thought I found parts of a fire plan in there, but I went back to look and I'm not sure if it's in there or not, but I guarantee you that it's inadequate, given the fact you couldn't control a controlled burn at Makua

M79-14

the draft EIS does not -- nowhere in the draft EIS is there a discussion on the impact on Hawaiian Electric, the Board of Water Supply, the refineries. What is the additional impact of the demands that are going to be created by the additional people? And it's not just the Stryker Brigade, because now if we get that carrier group, that's going to bring a whole lot more people into the State of Hawai'i with all of their additional demands. So you can see already the draft EIS, when it talks about cumulative impacts, really isn't talking about cumulative impacts because we haven't considered all of those other things.

M79-12

We share and understand your concern on this issue. Our soldiers and their families live and work on our installations. As summarized in Section 4.12, the Army proposes mitigation measures to include UXO clearance activities prior to construction and during training activities to reduce the overall UXO accumulation and potential risk to human health and safety through the life of the project. This issue has the highest level of attention at the Department of Army and it is addressed by a centrally managed program that involves the identification, investigation, evaluation, and, if needed, remediation of potential sites. This program, called the Installation Restoration Program, is coordinated with the state and the US EPA to insure compliance with all laws and regulations. It is not, however, possible to estimate cost or time required related to a specific site until the evaluation phase has been completed. The Army is committed to cleaning up existing sites in accordance with applicable laws regulations. In addition, if the Army chooses to relinquish ownership of the land as a result of a Base Realignment and Closer (BRAC), the Army will clean up unexploded ordnance left on the lands in accordance with all applicable laws and regulations, including but not limited to the implementation of the Formerly Used Defense Site (FUDs) program.

M79-13

Thank you for your comment. As a measure to reduce the risk of wildland fires, the Army has updated and improved the Integrated Wildland Fire Management Plan. This plan was updated in October 2003 and is being fully implemented at all Army installations. The plan will be implemented to any new lands that the Army may acquire. The plan is available upon request.

M79-14

Sections 4.14, 5.14, 6.14, 7.14, and 8.14 discuss specific impacts on public utilities as a result of the project, including increased demands from SBCT training operations and population increases. Section 9, Cumulative impacts, discusses the cumulative effect of growth on socioeconomic, public services, and utilities.

Comments**Speaker Leandra****M80 10/30/2003 Public Meeting****M80-1**

So I think if you put in your cultural -- in your EIS that you should have cultural values briefing before they enter society I think it will work. Thank you. (Applause)

Speaker Maile K. Hallums**M81 10/30/2003 Public Meeting****M81-1**

Right now I would ask you to relay to your committee to sit down, start all over again. Except this time take out the Apology Bill, Public Law 103-150. Read it. Eat it. Follow it up with a St. Thomas Law Review. Then do that EIS over again.

Responses**M80-1**

As summarized in Section 4.11, the Army proposes to include information in the soldier education cards and brief soldiers prior to training activities on the Native Hawaiian sacred sites, the importance of cultural resources, and measures soldiers need to be aware of to avoid impacts to cultural resources as part of the mitigation for cultural resources.

M81-1

We thank you for your comment and your comment has been considered and included into the administrative record for this process. Hawai'i was adopted as a territory of the U.S. Government in 1900 and was granted admission into the Union in 1959 via Pub L 86-3, 73 Stat 4 when the people of Hawai'i petitioned the U.S. Congress for statehood and adopted by vote in the election held on November 7, 1950 the Act of the Territorial Legislature of Hawai'i entitled "An Act to provide for a constitutional convention, the adoption of a State constitution, and the forwarding of the same to the Congress of the United States, and appropriating money therefore", approved May 20, 1949 (Act 334, Session Laws of Hawai'i, 1949). M82 10/30/2003 Public Meeting

M82-1

I picked a random page of acronyms just to give a flavor of what going through this volume is like. I'll just read one of the pages: "I3A, IAF, IA RII, IAV, IBCT, ICM, ICRMP, IDG, IDP, IFR, Initial BCT, INRAMP, IOC, anyway, you get the idea. It's extremely dense reading. I'd like to refer to appendix E to part 150 - or 651 of the Army's NEPA Regulations. And it says that the "likely environmental impacts need to be written in simple, non-technical language for the lay reader." This document fails miserably on that account, which is why we would support the requests that have been made for additional time for people to go through this document.

M82-2

I do think it has to be more than 300 pages that the regulations provide for complex projects because never before in this state have we seen a proposal, such a large proposal for an increased military presence presented to the public for consideration. So I don't think it can be made any shorter. In fact, in many respects, I think in order to respond to the concerns and some of the issues raised it needs to be longer.

M82-3

Being five times longer than what a complex EIS is supposed to be, written in military acronym speak it's absolutely impossible to expect anyone to provide rational commentary on this in the time provided. I think the 120 days that OHA has requested is generous to the military. A much longer period of time would be appropriate.

The most telling problem with the document is the complete lack of adequate alternatives analysis.

Responses

M82-1

Thank you for your comment. Every effort was made to make this report readable to the general public. If there are specific areas that the commenter needs clarification on we would be happy to provide a response. The comment period has been extended to a total of 90 days ending January 3, 2004.

M82-2

The DEIS was divided into 5 geographical areas making it easier for the general public to focus on impacts the project might have on their community. In addition there is a guide inside the front cover describing the organization of the document, an abstract of the DEIS, and a very detailed Table of Contents. In addition the Executive Summary highlights the important aspects of the proposed project including a project description, a summary of impacts, and proposed mitigation.

The public comment period was extended to 90 days and ended on January 3, 2004. According to NEPA regulations, the main text of a Final EIS should normally be no longer than 300 pages for proposals of unusual scope or complexity (40 CFR 1502.7). In practice, this recommended page limit is typically exceeded. The main text of this SBCT document is well over the suggested 300 pages in length, but the scope of the proposal, involving twenty-eight projects, acquisition of over 24,000 acres of land on two Hawaiian islands, and the comprehensive and complex evaluation of a multitude of resource impacts on the affected environment on O'ahu and Hawai'i necessitates an impact statement of this magnitude. For reviewers not electing to read the entire main text, an Executive Summary provides a comprehensive impact evaluation overview, including a mitigation matrix. Regarding time for EIS review, this is a large, comprehensive document requiring considerable time to thoroughly review. In view of this, the 45-day minimum comment period for draft environmental impact statements required by NEPA was extended to 90 days. Three months was considered an adequate period of time to review the document and provide written comments.

Stryker Brigade Combat Team Final EIS, Hawai'i

P-862

**M82-3
cont'd**

The testimony that was offered at the scoping session last April was, if you want to move troops safely to the battlefield, do you want to fly them in an airplane over open ocean until they hit Asia? Or do you want them to fly from Washington State over our allies in Canada, to Alaska, over to our Asian allies in Northwestern Asia -- Northeastern Asia, excuse me. It's that type of analysis that's completely lacking from this document. If you take a look at the executive summary -- and many people, frankly, aren't going to make it out of the executive summary -- it talks about alternatives analyzed and it gives a statement that's fairly accurate. It says, "The alternatives analyzed must reasonably meet the purpose of the need for the action.

Alternatives must also be practical and feasible. That is they must be capable of being implemented by the Army or another agency, be technically feasible and not require a commitment of resources they cannot practically be obtained." All of that is accurate and fair. This is a fatally flawed document because it does not -- it does not analyze a reasonable range of alternatives.

It says "EISs will serve as a means to assess environmental impacts of proposed military actions rather than justifying decisions." What you need to do is look at all reasonable alternatives for accomplishing your goal. And if you've determined that transformation through Stryker Brigades is the goal and what you want to do, you actually do need to do the hard work of considering your alternatives. Different brigades in different locations and what the relative advantages and disadvantages are. If it's not in your programmatic EIS and if it's not in this EIS, the question, quite simply, is where is it? NEPA requires nothing less than that analysis so that you can make a decision based on all the information rather than merely ratify a preordained conclusion. You owe us nothing less than a full alternatives analysis. You owe us nothing less than an adequate opportunity to provide feedback on the draft EIS.

M82-3

As discussed in section 1.6 of the FEIS the ROD for the Programmatic EIS directed the 2nd Brigade, 25th Infantry Division (Light) at Schofield Barracks, Hawai'i to transform to an SBCT. The Commanding General of the 25th ID (L) is charged with deciding how best to achieve that directive and provide for military training, readiness, and facility requirements to meet SBCT transformation needs, while enabling the current forces to continue to carry out their missions and giving due consideration to environmental factors. This decision will be based on the results of this EIS, and on consideration of all relevant factors including mission, cost, technical factors, and environmental considerations. This EIS considers a reasonable range of alternatives including several alternatives that involve transforming and/or training on the U.S. mainland. As discussed in Section 2.6, the mainland alternatives were not analyzed in detail because they did not meet the purpose and need of the proposed action. (Complete details on the proposed action are presented in Chapter 2 and Appendix D.)

May 2004

Stryker Brigade Combat Team Final EIS, Hawai'i

P-863

M82-4

Now, given the total lack of alternatives analysis in this document, it would do a disservice to the process and it would undermine the basic values of the National Environmental Policy Act to go from this document to a final. But fortunately, we have right here in this community examples of situations where the Army, I think quite appropriately, has recognized the deficiency of its NEPA documents and has gone back, taken another crack at it. That's with the Makua documents which ended up in court. What you really need to do is take public comment on this and use this as an expanded scoping period. Because, again, if you'll go back to the critique that I offered back in April 2002, during the scoping process, we didn't have adequate information to provide feedback on what you were proposing because it was one huge black box. At the time we held those meetings we had no idea precisely what you were preparing to do at all. You failed completely to fulfill the minimum requirements or your regulations Section 651.50 where you had to tell us really what you were thinking about doing. Well, finally, in this document, I feel that we have a better sense of what you'd like to do. This now provides a springboard for people to be able to provide informed comments on what those concerns they have about what you really propose to do.

M82-5

But I would respectfully submit the Army need not go completely back to the drawing board. But to truly look back at the scoping comments that were given to you a year and a half ago, analyze those alternatives, use this time as an opportunity for people to point out some of the gaps in analysis in this draft and come back with something that really tells us what the alternatives are, really tells us what the impacts are so that, hopefully, you can make an informed decision based on public input, and feedback rather than simply ratifying a decision that you've made and expect us to just sort of play along with the game.

M82-4

By letter dated May 28, 2002, the Garrison Commander sent each person who attended a scoping meeting a letter thanking them for their participation in the scoping process, and enclosing a 16-page information paper describing the proposed transformation and mission related projects. Also enclosed with the letter was a copy of the briefing presented at the scoping meetings, for the attendees' reference. These documents were also posted on the SBCT website and placed at various public and university libraries on O'ahu and the Big Island. The scoping period was extended for an additional 30 days to allow for review and comment on the additional information.

M82-5

We thank you for your comments regarding the need for a new draft EIS. We have considered your comments. We do not believe the changes we have made to the document reach the level of significance that requires preparation of a supplemental draft EIS under NEPA or its implementing regulations.

Speaker **Vincent Dodge**

M83 10/30/2003 Public Meeting

M83-1

It's only fair to expect and demand of our Army that they be the good neighbor, that they take the responsibility of providing us information that is not 1500 pages and not full of language that a regular person can't understand.

Speaker **Frenchie DeSoto**

M84 10/30/2003 Public Meeting

M84-1

Because in this environmental statement you've got to be a rocket scientist to understand all 50 pounds of it. It's insulting to say the least.

M84-2

It will have impacts on your ground water, but that's not jurisdictional, so it's okay. It's okay that you going to contaminate the water or do whatever you can because somebody said -- I think it was the Corps of Engineers said it was non-jurisdictional, whatever the -- whatever that means.

M84-3

And on top of that, we're talking about two pages of corrections. I mean, it's -- you don't even know what they're talking about.

Responses

M83-1

M84-2

The comment is probably referring to jurisdiction wetlands, which are wetlands under the jurisdiction of the US Army Corps of Engineers, under Section 404 of the Clean Water Act. The Corps of Engineers is responsible for classifying wetlands, permitting projects that impact wetlands, and determining whether mitigation measures are needed to compensate for loss of wetland resources. In order to be classified as a jurisdictional wetland, a wetland must meet three criteria: it must have water near or above the land surface, contain hydric soils, and have hydrophytic vegetation.

M84-3

The corrections were, for the most part, to describe changes that occurred during printing of the DEIS so as to insure that the public had the most up to date information on which to base their comments.

Comments**Responses****Speaker James Manaku****M85 10/30/2003 Public Meeting****M85-1**

Just looking at the route they're going through, just looking at the route, you can tell that it's not right. This is critical habitat. They going through critical habitat. They say they have no choice. the proposed routes, even when I'm looking at that, it would take away critical habitat for endangered species. You know, it was the Federal Government that says we need to protect this thing, and they did. Now they're saying we don't need that habitat no more. Gentlemen, we do need it. It's very important. It's very, very important. If we don't protect what we have now as an island, what will happen to us?

M85-2

If you folks want to use present roads that we have, I still get concerns, but, you know, not to make another route. You folks are going to take away critical habitat. If that's the case, then why don't we just eliminate all of this BS, and say, there's no such thing as critical habitat, there's no need to provide critical habitat, and then I can be more understanding. Then I can wake up in the morning, and go, okay. They going to blow up over here. We cannot do nothing. You know, I can understand that.

M85-1

Please refer to section 8.10 for a discussion and maps of critical and sensitive habitat relative to the project area. Measures designed to protect sensitive species and habitat have been agreed to and are discussed in full in the USFWS Biological Opinion.

M85-2

Sections 5.10, 6.10, 7.10, and 8.10 identify potential impacts and mitigation measures of the proposed action on biological resources.

M86 10/30/2003 Public Meeting

M86-1

I'm here to address about the Stryker Brigade, that I'm against it because of our environment. Why I'm saying that is because right now water is our most important thing, and today, as you notice, we're on restriction. By having more people come here, it's going to limit our water.

M86-2

Also, traffic that we having here. More people come, the more traffic going to come worse. And today, we're trying to eliminate all this traffic that it's creating. Now, you bring in these young people, these young military people, and you see the way they drive on our roads, the accidents that happen, is to do with the military. Can they have the same respect as we have to do when we enter the military base when they come off the base?

Speaker R. Kawehi Kanui

M87 10/30/2003 Public Meeting

M87-1

If you're bringing in 800, approximately, military personnel plus 3,000 dependents, we're in a state on an island that is already severely overcrowded. We have our H-1, H-2 freeways which are a joke. They should be named the Hawai'i state parking lot instead.

M87-2

we're going to be having more military -- how should I say -- traffic going in and out of Hawai'i. Hawai'i has an epidemic drug problem. There's a possibility that could cause an increase in drug trafficking in and out of Hawai'i.

M86-1

Your comment has been considered. Sections 4.14, 5.14, 6.14, 7.14, and 8.14 address water use and water demands relating to the project.

M86-2

As per Hawai'i Police Department and Hawai'i Department of Transportation policy, accident statistics or data citing liability concerns are not available, nor is there any data related to speed accidents available, as stated in Section 5.7.1. As noted in Section 2.2.3, to ensure maximum safety, all convoys must comply with local policies, as specified in standard operating procedures, which direct such matters as vehicle safety inspections and convoy safety briefings, and vehicle operators must be properly trained and licensed to operate assigned military vehicles.

M87-1

Your comment has been considered. Potential traffic impacts are addressed in Sections 5.7, 6.7, 7.7 and 8.7.

M87-2

Army personnel have been shown to have a lower incidence of drug abuse than the general population. Army Transformation would not be directly or indirectly responsible for drug abuse or associated illegal activities in the general population.

Comments

Speaker Vincent Dodge

M88 10/30/2003 Public Meeting

M88-1

And then the third alternative, which apparently the NEPA law says you have to do is no action. And, although this is mentioned several times in this volume, it's really not given very much credence, and I say that since it causes less pollution, less problems, since we're going to need what they call a legacy force, people -- everybody understand what a legacy force is? It's what the present military is doing. They're going to need what they're doing now.

M88-2

I want to end with some health effects. When they shoot their munitions, their artillery and mortars, they use propellants. They call them cover bags, and then any left over, they destroy on site or at least they're supposed to. They're not supposed to take it back. And according to this book, the -- once they burn these, the residues, what they call the burn-pan residues, include, among other things, led, DNT. It's an explosive, benzene and cyanide. The latter are -- certainly cyanide is a poison. Benzene is a known cancer causer. So, my question is when they use these bags to send these munitions out and they blow them up, aren't the same residues in that mixture that goes out with the munitions? I mean, you know, the propellants, they burn up there in the guns, in order to propel those munitions out, don't they have the same residues? And these are dangerous residues and they're going to be using a lot of them.

M88-3

Another one that's not mentioned, another toxin that's not mentioned that's found in propellants is perchlorate. You guys must be tired of me saying this because I said it all over. Poor Ron is smiling. You know, there's a lot of information out about propellants. It's relatively new. This perchlorate causes thyroid disease. I probably shouldn't do this, but how many people in the room either have or know of family members or friends that have some sort of thyroid disease? A goodly number of hands. We have a lot of it here in Hawai'i. This really needs to be included in your EIS. You need to do that. I keep pounding that issue and I hope it's done.

Responses

M88-1

A complete analysis was done for the No Action alternative and the discussion of this alternative is found throughout the EIS. No decision has been made as to the selected alternative at this time.

M88-2

Text added to read "After propellant burning is completed, a hazardous waste technician collects the residue. Disposal of burn pan residue is not required, but is a BMP that is instituted to minimize waste quantity and the potential for release to the environment. The technician takes all hazardous waste precautions by wearing a protective Tyvek suit, gloves, and a respirator during collection. Propellants are burned separately according to artillery type." As noted in Section 3.12.3 of the DEIS, unused artillery propellants are burned in designated burn pans, and the residues are collected and processed for disposal as hazardous materials. Emissions from open burning of propellants generally are similar to those from the detonation process that occurs during artillery firing, but there are some important differences. Open burning is a combustion process that can create various complex organic compounds as part of the emissions. Detonation processes are a shock wave induced decomposition process that decomposes initial compounds into simpler components. The fireball that accompanies detonation allows only a very brief period for high temperature oxidation reactions. Dispersion modeling and health risk analyses being conducted by the Army Center for Health Promotion and Preventive Medicine (US Army CHPPM 2000 a,b,c; US Army CHPPM 2001 a,b,c,d,e,f) demonstrate that weapons firing points at USARHAW installations are too far from residential or other sensitive land uses to cause any significant health risk.

M88-3

Perchlorate was included in the analytical suite for all of the soil samples collected in the soil investigations at PTA and SBMR. Perchlorate was not detected. The full results of the investigation (including non-detections) are included in Appendix M1.

Comments

M88-4

One other thing is that there was on Page 3-82, I shouldn't get that specific, but they refer to specific details being found in Appendix N2. I'm sorry to do this to you guys, but I have to, and then you go to Appendix N2 and it says refer to AR, which I guess is Army Regulations, AR 210-21. Where is that? I mean, it's like they refer you to one part, and that part refers you to something else that's not in this book. And I would very much appreciate if you would send me a copy of AR 210-21, please, so we can check that out.

M88-5

In summary, you know these three volumes, they weigh a lot, they're very long. I'd like to see anybody who's actually read all three; however, as to their conclusions, it's really not convincing, you know, because of significant health effects. As a physician, I'm really concerned about that, but also all the other things that people have mentioned, the contamination, the dust, the noise, the cultural effects, a whole list of things. I would feel that they should have come to the conclusion that no action is the best action.

Lawrence Ebel
10/30/2003 Public Meeting

M89-1

What I'm asking you for is a redoubled effort to have machinery, water supplies, helicopters, whatever's necessary, but whatever you think is adequate now for fire prevention -- for fire handling, putting out fires, maybe that's about half of what you need, and maybe that's something the city and county is going to have -- and the State is going to have to think about. We have a wonderful fire protection service.

Responses

M88-4

A summary of AR 210-21 is given in the appendix in the interest of brevity. The citation for this document can be found in Chapter 11 – References as are all references used in the EIS so the reader can do further research on their own if they'd like.

M88-5

The Department of the Army will make a decision whether or not to transform the 2d Brigade, 25th ID(L) in Hawai'i only after a full consideration of all the environmental impacts identified and analyzed under NEPA, weighed equally with considerations of strategic importance, military training and readiness, technical considerations, economic and fiscal considerations, and other considerations mandated by law or policy.

M89-1

Thank you for your comment. As a measure to reduce the risk of wildland fires, the Army has updated and improved the Integrated Wildland Fire Management Plan. This plan was updated in October 2003 and is being fully implemented at all Army installations. The plan will be implemented to any new lands that the Army may acquire. The plan is available upon request.

Speaker Shelly Zamborelli
M90 10/30/2003 Public Meeting

M90-1

And do I need to go look at pictures and read three of these to come to the conclusion that we're going to be taking sensitive areas, making them into a place where these tanks can go around.
 All the tanks I see are in the desert, so is the idea to make Hawai'i into a desert?

M90-1

We share and understand your concern on this issue. Our soldiers and their families live and work on our installations. The Department of Army has taken every step to minimize impacts of the proposed project as describe in the EIS while meeting the goals of training. Many mitigation measures have been incorporated into the project to reduce identified impacts where possible. Chapter 4 summarized the potential impacts and mitigation measures.

Speaker Walter Kamana
M91 10/30/2003 Public Meeting

M91-1

Second, if the machines come here, then you thinking about aqua, the water. Call a professional to check them. Call a professional check if the water is good or no good.

21 This things, bombing and stuff treating the
 22 water because we only get what people think our say, but
 23 we no experience from the main guy. This is water works.

M91-1

As summarized in Section 4.4, the Army has evaluated the potential impacts to water resources from the Proposed Action including construction and training activities.

M91-2

The military got to rent one private firm to take the water test. But we don't have expert how deep the water stay. How deep before you can hit these thing come in the water, destroy the water? It's like oil well. You got to go deep.

M91-2

The analysis presented in the EIS is based on existing available data. It is possible that additional information may be obtained in the future that would shed more light on this analysis. The EIS is a way of communicating to the public what we think would be the impacts of the project on the environment.

Speaker Summer Nemeth
M92 10/30/2003 Public Meeting

M92-1

I'm here because I'm concerned that all soldiers training in the areas designated for the Stryker Brigade will not be aware of the specifics documented in the Environmental Impact Statement that covers the culture, geological, biological significance of the Hawaiian island chain. I'm concerned that those soldiers will be left unaware of the damage and destruction of their training and that majority of soldiers stationed in Hawai'i remain uninformed of the practice of proper stewardship which native Hawaiians demonstrate through the concepts of aloha 'aina and malama 'aina. (Applause)

M92-2

Such an addition (of Army personnel) would have an overall significant impact not mitigable to the less than significant level on the number of possible alcohol-related traffic fatalities, spousal abuse cases and fights in local schools.

M92-3

Such an addition would have a significant but mitigable impact on the possible employment for a large number of the unemployed local population.

M92-4

The Stryker Brigade Hawai'i will have a severe non-mitigable impact on many of our unique ecosystems that are homes to many endangered species.

M92-5

I fear that the addition of a Stryker Brigade will pose a further threat in a possible attack against the U.S. military in Hawai'i in the future.

M92-1

The Army has worked with US Fish and Wildlife to determine measures that would ensure stabilization of the sensitive species and habitats. These measures are discussed in detail in the Biological Opinions for O'ahu and Hawai'i which were released in October and December of 2003. Similarly, the Army has worked with the SHPO to develop mitigation measures for cultural resources as discussed in the Final PA included in Appendix J. These biological and cultural resource measures are discussed in Sections 4.10 and 4.11. Soldiers visiting each area are given pocket information cards and a briefing prior to training to inform them of important resources in the area and the importance of avoiding these resources as well as safety information.

M92-2

Army personnel have been shown to have a lower incidence of drug abuse than the general population. Army Transformation would not be directly or indirectly responsible for drug abuse or associated illegal activities in the general population.

M92-3

Sections 4.13, 5.13, 6.13, 7.13, and 8.13 discuss the socioeconomic impacts of the proposed action on employment in Hawai'i. No significant adverse impacts on employment are expected as a result of the project.

M92-4

Biological resource issues are detailed in chapters 5.10, 6.10, 7.10 and 8.10.

M92-5

There is a relatively large complement of Army, Navy, Marines, and Air Force assets in Hawai'i that are more than capable of protecting U.S. interests from attack. Reorganizing one Army brigade will make relatively few changes to the overall Department of Defense presence in Hawai'i.

Comments

Speaker **Ralph Makaiau**
M93 10/30/2003 Public Meeting

M93-1

No, in the first Stryker presentation at the Kahuku High School cafeteria inside of this year, I asked you how would you help me dry up Kahuku. I read the EIS concerning Kahuku. Nothing has stated how you going to help Kahuku dry up. Because you are the source. Mauka is the source. The ahupua`a comes mauka to makai.

M93-2

You being the water source of the watershed, I'd like to see answers. Kahuku hasn't seen answers. And we're dealing with today's problems. They can't survive. The descendants won't survive if they got to go and build flood systems just to capture the runoff that somebody else should be responsible for.

Responses

M93-1

The project is not expected to increase flooding potential downstream. It would not significantly increase impervious areas and runoff and drainage at new facilities would be controlled through engineering design.

M93-2

As summarized in Section 4.4, the Army has evaluated the potential impacts to water resources from the Proposed Action. The Army has identified mitigation measures to reduce the impact to water resources to less than significant levels. One of these measures is the expansion of the existing ITAM program discussed in Chapter 2. The Army implements the ITAM program for the management of soil erosion from all current force activities. The ITAM program assesses the areas damaged, implements actions to repair damage, and monitors the effectiveness of those actions.

Comments

Speaker Joy Anamizu

M94 10/30/2003 Public Meeting

M94-1

First I would like to request that the public comment period be extended to 120 days and to include more public meetings. NEPA grants the public a minimum of 45 days to provide comment. This length of time is not enough for the public to thoroughly read, digest and comment on what you proposed.

M94-2

Second, the common concern that has been voiced at the other public meetings is that the Draft EIS is rather complex or beyond an average person's comprehension.

I too believe this is true. I also believe there are folks out there who are unable to comprehend this document either because they don't understand or read English very well.

They may be illiterate or have a learning disability or may become frustrated with the technical details.

What I recommend is that the Army hold public education sessions and community meetings to properly inform and educate the public of the training, mitigation and consequences that are involved.

M94-3

Third, it is my opinion that after briefly reviewing Chapter 7 of the KTN Kawaioloa section of the Draft EIS, I believe it to be severely inadequate and insufficient in its analyses and conclusions. It cites significances. It determines statistically by numbers. To get these numbers one needs to collect data which is usually done by conducting research and experiments. To conclude that an impact is significant or significant but mitigable to less than significant or less than significant without conducting a thorough investigation it is scientifically unsound, dangerous and unethical.

M94-4

Historically in this area -- I'm talking about the Kahuku -- this area, Turtle Bay all the way to Kahuku -- back in the second world war the military used this area as an airfield. We farmed this area back in the early nineties and was amazed to find a lot of trash, metal bottles near the airfield area that was uncovered when they plowed the land for planting. Basically these areas were used as dump sites.

Responses

M94-1

The public comment period was extended to 90 days, ending January 3, 2004.

M94-2

The DEIS was divided into 5 geographical areas making it easier for the general public to focus on impacts the project might have on their community. In addition there is a guide inside the front cover describing the organization of the document, an abstract of the DEIS, and a very detailed Table of Contents. In addition the Executive Summary highlights the important aspects of the proposed project including a project description, a summary of impacts, and proposed mitigation. Thank you for your comment. The Army is continuing to work to improve the community relations program for this and other actions proposed. Once a final decision has been made on the proposed action, the Army plans on working with the community to inform them of the final decision, any final mitigation measures that will be implemented and how this will effect the community.

M94-3

Thank you for your comments. Each of our impact analysis are based on specific factors for determining the level of impacts for each resource area as described in Chapter 4. We believe our approach to evaluation and analysis is based on the appropriate level of data collection.

M94-4

We thank you for your comment and participation in this public process. Your comment has been considered and has been included as part of the administrative record for this process.

Comments

M94-5

Recently in the past year on my farm, which is located both mauka and makai up Kam Highway and is adjacent to the Charlie Gate which leads up to the Kahuku Training Area, my farm has been used as a public bathroom by soldiers waiting for the range control officer to open the gate. In addition to trespassing and depositing their waste and filth on my farm, rubbish, canned rations and other waste from KTA has also been found on my property. This not only is a hazard to my mom and the workers that work on our farm, but it's just very bad. It's not good.

Speaker Keli'iwai (Chris) Camarillo
M95 10/30/2003 Public Meeting

M95-1

One of the things I saw lacking from the EIS was any mention of light pollution on the land and on the skies. Makahiki is observed by the rising of the pliates but I can get more into that. But I won't. You guys are looking into going into areas that do not have any light. You guys are planning on building several facilities that will probably be lit 24 hours a day.

M95-2

Because currently you do not have anything in place to remove the obsolete equipment that's already here and that you guys will be making obsolete by bringing in the Stryker Brigade. Nowhere in the EIS has there been talks about taking up the old desks, taking out the old tanks, the no longer used -- what is that called -- 2 and a half tons, 2 and a half ton vehicles, the HUMVEE you guys will be decommissioning and stuff like that. There's no mention of that. So that's another thing.

Responses

M94-5

This comment relates to current force training activities conducted by the Army and is not specific to the proposed action discussed in this document. However, in order to address this concern the Army will remind soldiers before each training session of the location of private property adjacent to Army owned or managed lands and that soldiers need to respect the private property owners, making sure not to trespass or litter. As part of this measure, the Army will update the existing "soldier check cards" with this information and include it in the training briefings.

M95-1

Light pollution is addressed in Section 8.3.2.

M95-2

The EIS has determined that there is no significant impact to public services by the implementation of the proposed action. The Army designs all of its projects, including those in this proposed action, in accordance with Executive Order 13123 "Greening the Government through Efficient Energy Management" (June 2001), Executive Order 13101 "Greening the Government through Waste Prevention, Recycling, and Federal Acquisition" (September 1998), and Department of the Army Engineering Technical Letter 1110-3-491 "Sustainable Design for Military Facilities" (May 2001) and the U.S. Army Corps of Engineers Sustainable Project Rating Tool (SPiRiT). These documents and tools provide design guidelines and standards for sustainable development - addressing water resources, energy and atmospheric resources, indoor environmental quality, material and other resources. The Defense Reutilization And Marketing Offices has established procedures for disposal of items no longer needed by the Army. It is not the policy of the Army to abandon any items.

1 PROCEEDINGS

2 MS. AMARAL: Let's bring spiritual guidance into the
3 deliberations before us. It helps to center us as we
4 gather together. It helps to get us focused on the work
5 that we have ahead of us.

6 Normally, I would call upon the Kapuna to come and to
7 lead us in prayer, and I would like to do that now and ask
8 if any of the Kapuna in the audience would like to come up
9 and lead us in an opening pule?

10 Then I ask you, with your indulgence, if I may, would
11 you allow me, please, then to do an opening pule. And kala
12 mai, it probably is much better if it comes from an older
13 person, but I'll start it. Thank you.

14 E ho mai ka 'ike mai luna mai e, 'O na mea huna
15 no'eau o na mele e, E ho mai, E ho mai, E ho mai. E ho mai
16 ka 'ike mai luna mai e, 'O na mea huna no'eau o na mele e,
17 E ho mai, E ho mai, E ho mai. Malo e.

18 To begin this gathering I would like to call upon our
19 host this evening and that is Colonel David Anderson. He
20 is the Garrison Commander of the U.S. Army, so, Colonel
21 Anderson. There you are. He's right where he should be.

22 COLONEL ANDERSON: Aloha, and good evening. As
23 Annelle said, I'm Colonel Dave Anderson, Garrison Commander
24 for the U.S. Army here in Hawaii. Thank you, Annelle, for
25 that opening pule. That's exactly the right way to start

1 this meeting.

2 On behalf of Major General Eric Olson Commanding
3 General of the 25th Infantry Division and U.S. Army Hawaii
4 I'd like to welcome you to tonight's meeting on the draft
5 Environmental Impact Statement for the transformation of
6 the 2nd Brigade for the 25th Infantry to a Stryker
7 Brigade Combat Team.

8 Before we begin, I'd like to tell you a little bit
9 about myself. I've been here about 14 months in the
10 Garrison. I've been involved with operations in the
11 Pacific for 8 or 10 years, and I've got 23 years in the
12 Army. My wife is here with me in Hawaii, and we've truly
13 enjoyed our time here in Hawaii.

14 Tonight we are here to listen to your concerns and
15 gather your comments on a draft Environmental Impact
16 Statement. We did this once before in a scoping meeting as
17 we began the Environmental Impact Statement process. I
18 think as you look, those that are very knowledgeable of the
19 process, and what we started out with, where our
20 Environmental Impact Statement is today in the draft form,
21 there are significant improvements and significant changes
22 in where we started from, and that's based on the public
23 input that we got during the scoping meetings. So, what
24 I'm here to tell you is that the input that you are here
25 tonight to provide to us as we go from a draft to a final

1 Environmental Impact Statement is very, very important to
2 us and has a significant impact on the final outcome of
3 this process.

4 Your role is to provide additional input on
5 environmental, cultural, and any other concerns you believe
6 should be addressed and analyzed in a final Environmental
7 Impact Statement. Environmental Impact Statement is the
8 most comprehensive document that could be prepared under
9 the National Environmental Policy Act.

10 I know now that everyone is anxious to get started,
11 and I do appreciate everybody's attendance here tonight,
12 and you don't want to listen to me anymore. So, with that,
13 we'll go ahead and get started. And again, the purpose
14 here tonight is to garner input into this process and to
15 include that in our final Environmental Impact Statement.
16 Your input, your concerns, and your thoughts are very, very
17 important to us as we go through this process.

18 Thank you.

19 (Applause)

20 MS. AMARAL: Thank you, Colonel Anderson. Also
21 joining us today at this table in the front farthest away
22 from me, but closest to you is Mr. Ron Borne. Mr. Borne is
23 the Army transformation manager and has been involved in
24 all of the scoping meetings and this entire process since
25 its inception here in Hawaii, and with us also is Mr. Mark

1 Katkow. Mark is with the office of the Judge Advocate
2 General and is here to provide legal advice to Colonel
3 Anderson and the others gathered here.
4 You met some of the resource people, most of whom are
5 seated on this side of the room during the open house
6 period, and things were set up quite intentionally this
7 way. What we heard during the scoping meetings was we want
8 less time of people talking at us, more time to allow us to
9 make public comment, so the Army redid its program to allow
10 a chance for people to deal directly with the resource
11 experts in each of the different pieces of the
12 Environmental Impact Statement and answer questions one on
13 one in order to allow during this public comment period
14 time to hear exclusively from you.

15 So some thoughts we'd like to leave with you before
16 we begin taking your comments. There are a number of ways
17 for us to comment. We're here this evening, and the public
18 comment period this evening is from seven o'clock to
19 ten o'clock, if it needs to go that long. Tomorrow night
20 will be at Helemanô Plantation, Thursday night at Makaha
21 Valley Resort, and next week Tuesday at the Turtle Bay
22 Hilton, and then we will go on to the Island of Hawaii
23 where we'll be at the Hilo Hawaiian and then the Waikoloa
24 Resort.

25 During the public comment period, we have standing by

PACIFIC REPORTING SERVICES UNLIMITED, INC.
(808) 524-PRSU

1 court reporters who are essentially taking your spoken
2 comment down verbatim for the transcript that will be
3 included in the documentation of these meetings. By
4 necessity, we have to have some time period for your
5 comments, so we would say to you that you could give
6 yourselves five minutes to be able to present your comments
7 to us. People sometimes get a little miffed at that
8 because, of course, I have 20 minutes of comments I really
9 need you to hear, we would suggest to you that, in fact,
10 your comment need not remain just here at the microphone,
11 exclusive to the microphone, but actually, you could write
12 it down and you can mail it in or fax it in.

13 So, when you came in, there was a registration table,
14 and at that table is a card from Cindy Barger, and Cindy's
15 address, phone number, fax number, and e-mail are all on
16 this card, so you can mail in your written comments after
17 tonight's meeting, you can fax it in or you can e-mail it
18 in, and the public comment period remains open until
19 November 19th, so you need not express everything here.
20 You hear something you want to talk about a little more,
21 write it out and then send it in to us.

22 You also should have received, at least, a public
23 comment card, so if your comments are this short, you can
24 attach it to this card. If they're longer, by all means
25 use extra paper.

1 This evening, and for all of the public hearings,
2 there are facilitators that will assist in this public
3 comment. We provide a number of functions. One is we
4 stand by you in case you get a little nervous and we
5 support you and encourage you. We also kind of watch the
6 time and remind you if you're running out of time.

7 We also are here to assure that decorum takes place
8 among us all, and that's probably one of the easiest tasks
9 we have because I believe that people in Hawaii know how to
10 act. I believe that we treat one another with respect. I
11 believe that that is something that is deep in us. It is
12 cultural. It is the way we were raised. And although we
13 may disagree with what the person is saying, we allow them
14 to speak their truth, and then we will later stand and we
15 will speak our truth, and each of us abides in that truth.
16 Although we may differ with one another, we are not
17 disagreeable with one another. That is our way. And so
18 the job of the facilitator is just to make sure that the
19 decorum remains and that we handle one another with
20 respect.

21 The other thing that I would point out to you is that
22 we have a Hawaiian language translator here. He is Puakea
23 Nogelmeier. He's a wonderfully gifted man and very patient
24 with us all, and he brought two students with him. What
25 happens now with the public -- what the Army discovered was

1 in the past in the scoping hearings, Hawaiians would come
2 up and they would speak, they would give their testimony in
3 Hawaiian, and then the court reporters would simply write
4 down inaudible, unintelligible, when, in fact, if you
5 listen to the record, it was wonderful, perfect Hawaiian.
6 Quite understandable. Quite audible.

7 MR. NOGELMEIER: Maybe I could explain.

8 MS. AMARAL: Please come. This is Puakea.

9 MR. NOGELMEIER: Aloha, ma'ane'i makou i keia ahiahi,
10 kokua no ka po'e 'olelo Hawai'i, ina makemake 'oe i kumai i
11 ka 'olelo Hawai'i, pa'a no kau 'olelo ma'ane'i hiki ia 'oe
12 ke 'olelo a unuhi nau iho, hiki ke 'olelo ma ka 'olelo
13 Hawai'i, waiho 'ia, unuhi 'ia ma ka pepa wale no, a hiki ke
14 noinoino i kokua na'u kekahi o makou e unuhi mai ma ka 'ao
15 'ao i ka 'olelo Hawai'i a kokua makou i ka wehewehe 'ana ma
16 ka 'olelo haole, nolaila, ina hoihoi kekahi e hele mai
17 ia'u, hiki ke ho'olala mamua.

18 Just to explain to any Hawaiian speakers in the house
19 that you can speak for yourself and translate for yourself,
20 you can speak in Hawaiian and have that recorded in the
21 testimony and it will be translated for the record, or you
22 can speak and ask myself or one of the others to translate
23 at your side to make that available to both the audience
24 and the record. A hui ho. Thank you very much.

25 (Applause)

1 MS. AMARAL: Thank you, Puakea.

2 All right. At this point now, what we would like to
3 do is to begin to call up the people who are registered to
4 speak. If you want to speak and you have not registered,
5 we would invite you to do so. There are a group of people
6 seated at the table outside and they're the ones handing us
7 the cards of the speakers.

8 I'm going to call up the first three speakers so you
9 know who's coming up. The first speaker is Marisa Plemer,
10 the second is Corrine Goldstick, and the third is Vicky
11 Takamine. Marisa.

12 MS. MARISA PLEMER: Aloha. I say no to the
13 transformation. I'm most concerned about the harmful
14 chemicals that the Army leaves behind wherever it goes.
15 Army personnel leave the islands. There's no
16 accountability, records are lost, the years go by and no
17 one knows what was left behind in the land and the water as
18 we have seen in Makua Valley for 70 years. No more land,
19 no more expansion until everything harmful has been cleaned
20 up. Mahalo.

21 (Applause)

22 MS. AMARAL: Mahalo. Our next speaker is Corrine
23 Goldstick. Corrine.

24 (No response.)

25 MS. AMARAL: We'll call her again later. Victoria

1 Holt Takamine.

2 (No response.)

3 MS. AMARAL: We'll call her later. Piilani Smith.

4 (No response.)

5 MS. AMARAL: We'll call her later. Bud Ebel.

6 MR. BUD EBEL: Good evening, ladies and gentlemen. I

7 appreciate the opportunity to come here. The environmental

8 issues are a concern to all of us. Everybody knows that,

9 but yet we have people here wanting to hook up to a sewer

10 plant. But anyway, let's get back to the change in the

11 military. This apparently is required. They think it is,

12 and I support their thinking. I don't know if it is, but

13 if the infantry needs something between heavy armor and his

14 face, then the Stryker Brigade is it. It's going to save

15 lives. It's going to help us win.

16 This requires some training facilities. Hawaii is

17 part of those -- this program. The whole country is. I

18 just want you to know I support it, but I have to go back

19 50 years. A bunch of us guys went up to the artic and we

20 put in a thing called a DEW line, and we didn't know what

21 the hell it was, but we were working hard. We did it. We

22 got that thing in there. It was a short-term radar

23 advantage from the Russians. A lot of money went in the

24 pot and everybody said, you know, it wasn't worth it. I

25 think it was worth it. It certainly sealed our border. I

1 was proud to be a part of the engineers at the time. We
2 built the harbors. We built the storage, on and on, but
3 the thing that really impressed me now that I'm getting a
4 little older is I stumbled across an article in the
5 National Geographic. Those facilities we built are still
6 there. We got the NOAA, National Ocean Atmospheric
7 Administration, they're doing deep space probe studies.
8 They're using those facilities. These are weather proof
9 facilities take my word for it. They're using those
10 facilities for weathermen, radar warning systems, space,
11 satellite tracking, and deep space probes.

12 What I'm saying here is you would be amazed at some
13 of the benefits that the Army brings to this country. I
14 don't want to talk to you about Walter Reed and all that,
15 and Malaria and on and on. I want to talk to you about the
16 facilities you need. I support your efforts. I ask you to
17 pay particular attention to the environment because we all
18 do worry, but I can tell you that there may be some side
19 benefits that you couldn't possibly imagine in the year
20 2050 because of what's happening in 2003.

21 I thank you for your time, and I do offer you support
22 and I'm proud to have served in the Army. Thank you.

23 (Applause)

24 MS. LEE: Thank you, sir. Good evening. I'm Miki
25 Lee. I'm taking over for Annelle for a few minutes. Our

1 next speaker is Daniel Sailer or Lynette Williams.

2 MR. DANIEL SAILER: Hello there. For the record, my
3 name is Dan Sailer, and I'm the local programs natural
4 resource manager for The Nature Conservancy, and for those
5 folks who don't know, The Nature Conservancy is a private,
6 non-profit conservation organization.

7 The Nature Conservancy has been in many discussions
8 with the Army regarding their plans for the transformation
9 since we made our comments at the public scoping meetings
10 last year. We're pleased that the Army did listen to our
11 concerns regarding the proposed acquisition of the northern
12 portion of our Honouliuli Preserve for use as a small arms
13 qualifications range.

14 The original plan faced the range directly into one
15 of our highest priority management areas, effectively
16 blocking us out from doing our own work. The Army did
17 realign the firing range so that it would no longer face
18 our main work area, and because the acquisition area
19 borders our reserve and includes the access roads, in our
20 negotiations with the Army, it was agreed that we should be
21 allowed continuous and unlimited access into the reserve.

22 In our opinion, realigning the range is of no benefit
23 to our conservation efforts if we cannot get in. We do
24 believe that the Army intends to follow through on this
25 agreement, however, we are disappointed that the draft

1 Environmental Impact Statement states that our access would
2 only be allowed when the range is not in use. With the
3 estimated 180 to 240 days per year and 8 to 12 hours of
4 range use per day, that could mean that we would only be
5 allowed access on weekends, holidays, and a few days in
6 between. That clearly does not coincide with our work
7 schedule and as a result, one of our main work areas would
8 effectively be left unmanaged.

9 The draft EIS recognizes that this mitigation would
10 not reduce the environmental impact to less than significant.
11 In other words, by effectively blocking us out from our
12 management areas, that impact would be significant.

13 An additional mitigation that the Army considers in
14 the draft EIS is obtaining a permit to allow The Nature
15 Conservancy access. We propose that this statement be
16 rewritten to give us perpetual access that is necessary to
17 carry out our work. Conservation is a long term and
18 continuous process which requires a multi-decade
19 commitment.

20 Some of you folks may be wondering just why are we so
21 concerned about ongoing management. This particular area
22 contains the largest reintroduced populations of several
23 endangered plant species totaling over 700 individuals,
24 and in this next coming three months, we plan to nearly
25 double that number and to introduce potentially over 1200

1 additional plant individuals. It also contains many rare
2 and endangered naturally occurring plant and animal
3 populations and represents the best intact native forested
4 area in the southern Waianae mountains. The entire
5 preserve is also considered a critical habitat for the
6 endangered Oahu Island 'elepaio bird.

7 And just to give you an idea of what we do on a daily
8 basis, our activities in any given week consist of
9 restoration activities, high school classes participating
10 in project stewardship, which is a conservation training
11 program, and control of rats eating endangered snails as
12 well as young 'elepaio, and we also lead interpretive hikes
13 for the public which you folks are more than welcome to
14 join us on. So, as you can see, our management work and
15 education work does require us to have access just about
16 every day of the week.

17 Another concern is for the prevention and suppression
18 of wildfires. According to the draft EIS, ammunition,
19 weapon systems, and pyrotechnics will be used during
20 training at Schofield's main post, and as we have
21 witnessed, even with a good fire plan and the system of
22 fire break roads, fires can and do escape and burn
23 unfortunately for many, many days. We are concerned that
24 the forest habitat and species that are damaged by these
25 fires above Schofield would also threaten Honouliuli

1 Preserve.

2 So, we strongly urge the Army to include a series of
3 fire break roads and other presuppression measures in its
4 wildfire plan, and the Army should also train all
5 applicable personnel to implement the wildfire plan and to
6 communicate efficiently with each other so that valuable
7 hours, if not minutes, are not wasted just because of a
8 lack of coordination.

9 Lastly, over the past four years, The Nature
10 Conservancy has been engaged in ongoing discussions with
11 the Army regarding the use of lands in Honouliuli Preserves
12 as part of the Makua Implementation Plan. Sections of the
13 preserve, including the areas that we have specifically
14 mentioned above, are planned to be used for stabilization
15 for more than a dozen plant and animal species mention in
16 the Makua Implementation Plan.

17 The Army must understand that their mitigation and
18 conservation goals can only be achieved if we have daily
19 access and that these areas are protected from wildfire and
20 endangered species. We are confident that the Army will
21 continue to listen to our concerns and make the changes
22 that we find are necessary. These changes are not major.
23 It's not a lot of land, and these kind of access agreements
24 are not -- not impossible to overcome.

25 The Nature Conservancy recognizes the Army as an

1 important value and conservation partner in Hawaii, and we
2 will continue to seek ways to work together to accommodate
3 the Army's own training needs without damaging the
4 irreplaceable resources of Honouliuli.

5 For those interested in learning a little bit more
6 about our preserves, we do have a booklet here that one of
7 my co-workers has made available, so you can see us after
8 the hearing to learn more about our own efforts in
9 Honouliuli. And thank you for your time.

10 (Applause)

11 MS. LEE: Our next speaker is Wally Inglis. Is Wally
12 here?

13 MR. WALLY INGLIS: Good evening. Aloha. My name is
14 Wally Inglis, and I'm a retired state worker, and I live on
15 the Island of Oahu. I offer testimony tonight on behalf of
16 the Center for Non-Violent Education and Action, a
17 statewide network which is based at Mala Aina Farm on the
18 Big Island's Puna District. I served on the board of
19 directors of the center since its founding more than 20
20 years ago.

21 The Center's detailed testimony will be presented
22 next week in public meetings scheduled for the Island of
23 Hawaii, so what you're getting tonight is a short form,
24 abbreviated to save time and avoid repetition.

25 The intent of my statement is to oppose this project

PACIFIC REPORTING SERVICES UNLIMITED, INC.
(808) 524-PRSU

1 and to signify that the Stryker threat is not island
2 specific. It is neither a Big Island nor an Oahu issue.
3 The implications are statewide and nationwide. If truth be
4 told, we are global. To quote our Center's director from
5 an article published recently in the Hawaii Island Journal,
6 "A Stryker Brigade will deepen Hawaii's involvement in
7 raging wars of aggression and occupation of other nations
8 around the world. There is nothing defensive about a
9 Stryker. A Stryker is meant to strike."

10 We've been called here tonight to talk about, quote,
11 the environment, to respond to a thousand page, three
12 volume opus. It looks for more loopholes to continue the
13 military's century long exploitation of our island. It
14 doesn't take a -- with all due respect, it doesn't take a
15 rocket scientist to realize that the impacts on a fragile
16 ecosystem will be monumental, they'll be devastating.

17 And what are the other impacts, the economic, the
18 cultural, and the spiritual impacts? Who's working on
19 those impact statements? We can save countless reams of
20 paper and precious hours of our time by curbing this
21 monster before it is unleashed on a land that is already
22 been ravaged and militarized over too long a time.

23 Our message to the military is this: Clean up, not
24 build up. Rather than expand your operations, take on the
25 Herculean task of cleaning up the wreckage of past

1 operations.

2 Let me close with an anecdote. Earlier this month my
3 son, a UH student at the college of education, was working
4 on an assignment that had him looking into how education in
5 our state is funded. In browsing through the DOE's budget,
6 he noticed that something in the neighborhood of 1.5
7 billion has been appropriated to run all of our schools
8 over a two-year period.

9 As we were discussing this and he mentioned this
10 figure, I saw a light go on in his eyes. He left the room,
11 returning in a moment with the morning paper. "I knew that
12 figure looked familiar," he said, "that's how much it would
13 cost for one Stryker Brigade." That's a partial answer to
14 my question that I pose about the important impact
15 statements are not coming from the generals and the
16 politicians. They're coming from ordinary people like my
17 son, and this is where a measure of hope lies for all of
18 us. Thank you.

19 (Applause)

20 MS. LEE: Our next speaker is Maunakea Trask.

21 MR. MAUNAKEA TRASK: Good evening. My name is
22 Maunakea Trask, and it is that Trask for those of you guys
23 who were wondering. Well, I leave that up to my aunties to
24 do that stuff.

25 I'm a law student right now at the University of

PACIFIC REPORTING SERVICES UNLIMITED, INC.
(808) 524-PRSU

1 Hawaii, and I'm in environmental class, and I'm in all
2 these different things and we learn about public hearings
3 and stuff like that, and I also majored in anthropology and
4 archeology for undergrad, so my concerns are, you know --
5 they are focused on that, cultural resources, as well as
6 land use in Hawaii and legal implications of this whole
7 thing.

8 My concern is that I understand -- I'm not going to
9 bad mouth the military. You know, you guys have your
10 agenda and we have ours. I respect that. That's fine. My
11 concern is, though, that this gentleman stated before the
12 arctic outpost weather proof facility is used for great
13 things, but my understanding -- I printed out the executive
14 summary of the Environmental Impact Statement, and it seems
15 to me that these are going to be largely training
16 facilities, and I don't think that personally much more can
17 be used after a training facility is used at all. You
18 know, they're bombing targets. I mean, you still can't go
19 on Kaho'olawe now. It has bullet ridden buildings, fake
20 cities, sham cities to engage in urban warfare in the
21 Middle East. Maybe they can be used for public housing
22 later, but maybe not.

23 Also, I was watching television the other day. I
24 watch TV all the time, and there's a new Army-of-one spot,
25 if anyone's seen it, regarding Pohakuloa, and it's about a

1 Private First Class, young kid from the Mainland, you know,
2 and he has 25 tons of dynamite and he needs to build a
3 road, except the road's on a volcano, so what do you do?
4 You shove all the dynamite in the ground and you fire in
5 the hole, bang, Army of One. That's what that is.

6 But the thing about Hawaii is that Hawaii is a state
7 planning state. They plan all their land use as they
8 classify it and our islands are divided into four uses;
9 there's urban, rural, agricultural, and conservation.

10 Now, urban is largely on Oahu, right, that's all the
11 urban life. Agricultural land and conservation land is the
12 biggest one, and the Army would be taking conservation and
13 agricultural land, and my concern is that after -- we're
14 going to win the war on terrorism. I trust you guys. You
15 know, no one can beat us. Solid. But when the war is
16 over, we're going to be stuck with like two more
17 Kaho'olawes and we'll be forced to clean it up. And we'll
18 have to -- on Kaho'olawe there's, you know, unexploded
19 ordnances, there's trash, there's military desks, file
20 cabinets, goats, the land is trashed, and it may be a
21 casualty of war -- another casualty of war, but as a
22 Hawaiian, my concern is the aina, and when it's gone, it's
23 gone.

24 And so -- and if agricultural land and conservation
25 land is appropriate, I guess, under eminent domain, which

1 is legal, it's totally legal, there's -- there won't be any
2 uses after, and in the Environmental Impact Statement and
3 some of the reports, in the report itself, it seems that
4 the Army understands this and they accept it.

5 Okay. But just, please, there's too much -- there's
6 enough pilikia between us already. People are yelling.
7 People are screaming. There's people outside holding
8 signs, and I understand part of the reason why you were --
9 it's beneficial to hold meetings on private properties so
10 you can expedite, make it go fast, so there's not all the
11 crazies, you can avoid all that, because you can regulate
12 people on private property, not public property. That's
13 why it's not in a school, it's not in a neighborhood
14 center.

15 It would be -- trust me. It would be in the Army's
16 best interest to realize that even though you are
17 autonomous and you can operate within your own laws, and
18 you even have your own legal system, the Judge Advocate
19 Generals, it's still good to be a part of the community,
20 and to realize that Hawaiians will stick by you. They'll
21 stick by you, like on the west side on Kauai, they love you
22 guys, but really when doing this, you have a lot of good
23 ideas about your mitigation measures and -- just try to
24 give us something. Just some consolation, which would be
25 in your best interest, you know. And that's just about it.

1 Thank you very much.

2 (Applause)

3 MS. LEE: Josh Stanbro, and following Josh is Mandy

4 Baptist. Is Josh in the audience?

5 (No response.)

6 MS. LEE: Mandy.

7 MS. MANDY BAPTIST: Aloha. My name is Manda. I'm a

8 student at UH Manoa, and I'm studying history with a focus

9 on indigenous people. As I was going through the EIS on

10 various military training sites that we have here in the

11 islands, you come to a realization that it's only native

12 Hawaiians that are affected. It's any basic human who has

13 to live off the land, and a lot of the wording in the EIS

14 has a lot to do with -- environmental pollution is not like

15 toxins entering our freshwater aquifers. What I'd like to

16 have in the EIS is what the plan is if something like that

17 happens because every single person, whether you are a

18 native or not to Hawaii, will be affected by that.

19 And it's unfortunate for, like, the people who are

20 extremely passionate, and, you know, very upset are unable

21 to come here because they want to bring signs in and

22 whatnot, because those are people that actually have to

23 live off of the land that has already been, you know,

24 polluted by military training.

25 And in September I was able to go to Makua Valley

1 Military Reservation, and we were trying to dig out and
2 clean out a freshwater well that was supposed to have had
3 the freshest water in all of Hawaii, but it's all covered
4 up, and we couldn't even use shovels to dig out the dirt
5 because of the danger of the unexploded ordnance, so
6 pathetically, we're using literally tree branches to dig up
7 all this dirt and we're basically not getting anywhere, and
8 this is obviously what's going to happen if this continues.
9 And just -- I think it's unfortunate that not more people
10 are here to explain their concern to you folks, and I
11 appreciate you folks having us, but we really need to be
12 more aware that it's a human thing. That the military, you
13 know -- you're affecting humans, just in general. I'm
14 sorry. Thank you.

15 (Applause)

16 MS. LEE: So that was the end of my list of people
17 who had signed up when they checked in at the front. I'm
18 going to cycle back through. We called several names that
19 weren't here at the time.

20 Corrine Goldstick, Vicky Takamine, Piilani Smith, and
21 Josh Stanbro. Is there anyone here who wishes to come up
22 and speak who didn't sign up on one of these? You would
23 like to come on up, and if you wouldn't mind, just stating
24 your name for the record since I don't have it.

25 MS. WENDY RENEE: Aloha. My name is Wendy Renee. I

1 wasn't sure if I was going to say anything tonight, but

2 obviously, I really did want to say something. I am in

3 opposition of the sky -- Stryker Brigade.

4 I've been working for peace. I served in the Air

5 Force for five years in '82 to '87, and within those five

6 years, it became very, very clear on how I wanted to work

7 for peace, and I brought the Earth Charter here, and I gave

8 it to one of your representatives to please review and

9 perhaps incorporate the Earth Charter principles into your

10 plans on using Hawaii or any part of our world for

11 practicing.

12 In particular, I wanted to share from this Earth

13 Charter, prevent harm as the best method of environmental

14 protection, and when knowledge is limited, apply a

15 precautionary approach. There's two parts of this I wanted

16 to share. One is, "Prevent pollution on any part of the

17 environment and allow no build-up of radioactive toxic or

18 other hazardous substances." And also, "Avoid military

19 activities damaging to the environment."

20 I'm born and raised in Hawaii. I consider myself a

21 world-class citizen, and we should protect the land. We're

22 interdependent to the land, people and the environment.

23 So, I wish that, you know, none of the practices should

24 be -- I can only speak about our land in Hawaii, but, you

25 know, looking at Kaho'olawe, what was done on Kaho'olawe is

1 going to be a repeat on this land, that's my understanding.

2 So, if I'm wrong, please clarify that.

3 (Applause)

4 MS. LEE: I've got two more speakers that signed up,

5 Dr. Marion Kelly and Pete Doktor. Marion.

6 MS. MARION KELLY: I have to get my speech out first.

7 MS. LEE: Okay. While she's getting her speech out,

8 let me just remind you folks that this is the first of six

9 meetings that are taking place, four of which are here on

10 Oahu, two on the Big Island. In addition to giving comment

11 here, you're invited to send comment after the fact. If

12 you leave this meeting and you find that you didn't get a

13 chance to say something, they're accepting comments in

14 writing by fax, and I believe they're taking it up through

15 the 19th of November. Do I have that right? Yes. Thank

16 you.

17 MS. MARION KELLY: Good evening. What a small group

18 of people for a very important topic. What happened?

19 UNIDENTIFIED SPEAKER: Controlled access.

20 MS. MARION KELLY: That's right. Don't let anybody

21 in who is against this. I've only been here for a few

22 minutes. I've been hunting for this place for two hours.

23 I finally followed the cops' cars here. There are about

24 eight of them out there, and I found it. That's an

25 interesting statement.

1 I'm extremely disappointed that not being allowed to
2 bring a very large piece of cardboard with a very brief
3 statement that summarizes my speech. Especially for those
4 who are deaf and don't hear what I have to say. But
5 privacy of this place -- this is a public hearing.
6 Outrageous.

7 I've been to public hearings all my life, here in
8 Hawaii. I was born here. I was raised here. I'm 84 years
9 old. I've been to a hell of a lot of public hearings, and
10 this is the first time the military has won. Outrageous.

11 I talk. United States continues to prevent the
12 nation of Hawaii, a peaceful nation, to exist. If I may, I
13 would like to speak briefly on a small portion of Hawaii's
14 history to present my position that the United States
15 military must not settle their Strykers in Hawaii.
16 Verboten.

17 In 1893, Americans landed troops in the islands to
18 support the greedy American sugar plantations. Do any of
19 you know that story? Maybe not. I'll be darn. They
20 support the troops, the American troops supported the sugar
21 plantation owners. They had already privatized the land
22 and had taken over much of it for a few cents per acre.

23 They were well on their way to becoming wealthy and
24 taking over political control of the islands and of the
25 Hawaiians. They were anxious to get more money for their

1 sugar that they sold to the United States. I know this

2 history so well. This is treating it very poorly.

3 So to get more money for their sugar, they took over

4 the peaceful Hawaii nation and put Queen Lili'uokalani in

5 jail and aimed to turn Hawaii over to the United States.

6 These are the sugar -- where's sugar today? Do you know if

7 there are any sugar plantations around? There are a couple

8 on Kauai and maybe on Maui, but that's about it. None

9 here.

10 In response, the women of the independent nation of

11 Hawaii gathered their people together on each of the

12 islands and held meetings. They organized -- the women.

13 They organized what has become known as the monster

14 petition. It was against the American takeover. They

15 gathered some 38,000 signatures and presented the petition

16 to the United States Senate in 1897.

17 The petitions stopped the United States Senate from

18 annexing Hawaii. In 1898, as Spain gained independence to

19 its colonies, the Philippines, Puerto Rico, and Cuba, the

20 United States moved in to take over the former colonies.

21 In order to take over the Philippines, they needed Hawaii

22 and Samoa for refueling stopovers.

23 The United States struck a deal with Stanford B. Dole

24 and the American sugar plantation owners who controlled

25 Hawaii's economy. The United States took over the Hawaiian

1 Islands. The Hawaiian people were not consulted. They had
2 no say in the matter. The Hawaiian 38,000 signatures on
3 the petition were completely ignored. The American
4 military moved in to secure their controlling position, and
5 they have been here ever since. The United States has
6 controlled Hawaii for over a hundred years. Outrageous.

7 Now, with the threat of the United States importing
8 their Stryker Brigade of 300 -- is that correct? 300?

9 COLONEL ANDERSON: Approximately.

10 MS. MARION KELLY: Approximately. Maybe 400? Maybe
11 500? Eight-wheeled vehicles into our Hawaiian Islands.

12 Many of us feel that the United States is using this means
13 to continue to intimidate us. I am not intimidated, and
14 there are plenty of people around here who are not
15 intimidated.

16 Our islands are small. Our islands have only 6,424
17 square miles and few natural resources. The continental
18 United States has more than 3.6 million square miles within
19 its borders, and all the natural resources that are it. We
20 do not want nor do we need any more of the United States
21 military flexing its muscles in our peaceful land.

22 I'm very disappointed that more people were not here,
23 but I can certainly understand why they did not come, and I
24 just want to let you know that there are a lot of people,
25 as we passed by, who were at this demonstration last week,

1 people who I know, who I appreciate for their ideas, for
2 their concepts, and their sense of peace, and they are
3 those who are striking resistance to the Strykers, striking
4 resistance to the Strykers, and they should be listened to.

5 And another topic is Makua Valley. We've tried to
6 get you folks out of Makua Valley, and now you want to take
7 over more acres of Hawaii, and you should not have them.
8 And I want to say I'm against any further military
9 takeover, and I really wish you folks would just take off
10 and go home. Thank you very much.

11 (Applause)

12 MS. LEE: Our next few speakers are Peter Doktor,
13 Suzanne M. is the last name, and Danny Li. Is Peter here?

14 MR. PETER DOKTOR: Yeah.

15 MS. LEE: Thank you. Come on up.

16 MR. PETER DOKTOR: Aloha. Good evening, everyone.
17 My name is Pete Doktor, United States Army 1986 to 1989.
18 My ancestors are from Okinawa where we've been fighting for
19 generations against the same military occupation. It's
20 interesting how these military bases end up in places like
21 Guam, Puerto Rico, Okinawa and so forth, and not in the
22 backyards of Martha's Vineyard, but rather in Kaho'olawe.
23 It's no coincidence. And also my ancestors are -- I'm also
24 a product of the cold war. My father is a Marine, a
25 27-year Corps Vet, World War II, Korea, and Nam, so I come

1 out of war, and that's why I come here.

2 My experiences in the military, we used to -- the EPA
3 used to shut us down all the time we do our field games
4 because we would just tear up -- we would just tear up the
5 environment, beautiful land that was public land,
6 supposedly protected, you know, public land for future
7 generations, and we would just tear it up with our APCs,
8 but there was nothing they could do.

9 I mean, it's like telling, oh, we're going to have a
10 war, but there's going to be no casualties. You cannot
11 have one and not the other. And this is where I have
12 some -- I won't call it sympathy, but I remember when the
13 politicians making decisions to send military personnel
14 out, that they promised the public that it would be quick
15 and safe and stuff, and then in the meanwhile, they send
16 you guys out there, cut your benefits. I won't even go
17 with my post-military experiences. I won't even go to the
18 VA Hospital. I won't even go there.

19 I just -- I just find it sad that I -- we've been
20 used as puppets, been exploited by the politicians. The
21 Commander In Chief is a politician, okay? Let's don't kid
22 ourselves.

23 So my question -- I'll keep it quick. My question is
24 we cannot guarantee there's not going to be accidents. You
25 cannot guarantee there's not going to be any loss of life.

1 You cannot guarantee that there's going to be an impact on
2 the land, the air, the water. Again, you cannot have one
3 without the other. You prepare for war, there's a price to
4 pay.

5 Why not just be straight up and say, look. Yeah, we
6 want to train and this is the impact we're going to have.
7 Are you guys willing to accept that price? But no, we've
8 got to have these -- you know, skirt around the issues, and
9 you know why I think that is, why you guys cannot be
10 honest, military agencies and the government, is because
11 you guys are afraid of democracy. If people were truly
12 informed, they might just vote against it and then, you
13 know, you'd have democracy, people would get their way, and
14 the military wouldn't. I think it's tragic. That's why
15 we're here.

16 We're not -- I heard another speaker say we keep out
17 the radicals and the crazy people. That's ridiculous.
18 That's an insult to some of those aunties who have a lot of
19 experience. A lot of the grandmas are out there being
20 treated like criminals or something. Guns kill people.
21 Weapons of mass destruction kill people, not little signs,
22 okay?

23 Now, the one thing -- I also work in a public high
24 school, okay. And many of those that are most impacted by
25 these kind of things aren't able to speak here. I'm not

1 talking about those that weren't let in here because they
2 had a little sign or anything. I'm talking about future
3 generations, and I'm also talking about other species that
4 get eradicated and endangered by us that cannot speak for
5 themselves. I'm talking about future generations.

6 It breaks my heart when I go to the school and the
7 students are like, "Hey, mister, we gonna go war? We gonna
8 get drafted?" And you can see the fear in their eyes, and,
9 you know, I don't know what to say because the direction of
10 the way things are going, you cannot say, oh, no.
11 Everything's going to be fine. Everything's going to be
12 great, just the way the PR system wants to let you know
13 that everything's going to be okay.

14 Again, I talked with the youth, they would be against
15 this, okay? I'm not speaking for them in terms of like I
16 did a poll, but I can tell you this, when I talked to the
17 students in the high schools, clearly, 90 percent don't
18 want the military here either and they cannot speak for
19 themselves, and you know what, they're going to have to pay
20 the price. They're the ones that are going to have to deal
21 with the mess. They're the ones who are going to have
22 their money taken out of their paychecks to pay for the
23 cleanups, and they're not here being represented.

24 This whole movement is anti-democratic. You know,
25 again, what happened outside is just -- it's not just a

1 metaphor. It really is happening of how this whole thing
2 is fraud. The decision has already been made, so why are
3 we wasting our time here? Because they're going to do what
4 they want to do anyway, right? So let's just hold our
5 process to make us feel all good, well, okay. Well, we got
6 to go with things and things will work out, you know,
7 but -- you know, there's a connection between 1893 and
8 2003. If you guys cannot see the connection, I don't know.
9 I cannot make it for you.

10 So, I'll just leave with one last question, too.
11 It's just this: With such an extensive history of breaking
12 promises, whether it's Makua, whether it's taking people's
13 land, World War II, promising to give it back after the
14 war's over. Still waiting. I can go to Okinawa, too. A
15 lot of promises made. Oh, yeah, we're going to give back
16 this, we're going to give back that on the condition of
17 this and that. Still waiting.

18 Now, how are we supposed to believe, all this stuff
19 they're going to tell us, all those little signs over
20 there? How are we supposed to believe when we have this
21 extensive record of breaking promises? And to be fair,
22 some of those promises cannot be kept because, like I said,
23 as a former military personnel, things just happen, okay?
24 And we're not willing to pay the price. Thank you.

25 (Applause)

1 MS. LEE: Just an announcement, if there are people
 2 who did not sign up who wish to give testimony or comments,
 3 but don't want to come to the mike, we have a stenographer
 4 waiting back there who's willing to sit with you and take
 5 your comments there.

6 We are looking for input on the draft EIS, and we
 7 have three folks signed up here, Suzanne, Danny Li, and
 8 June Shimokawa. Is Suzanne here?

9 (More proceedings were had on the following page.)

25

1 MS. LEE: Is Suzanne here?

2 MS. SUZANNE MARINELE: My name is
3 Suzanne Marinele. I'm here representing myself. I
4 want to apologize in advance. I'm unprepared for this.
5 I very recently found out about this. And I was
6 reading while I was driving in the car. We're not
7 going to tell anybody about that. (Laughter) And I
8 will submit written comments later that I hope will be
9 more coherent.

10 Hastily based upon a very cursory
11 reading of the executive summary of this project and of
12 my threading my way through a great surprise when I
13 came in the door, those are going to be the basis of
14 the limited comments I have at the moment.

15 The introduction to the executive
16 summary, as I read it, gives a big overview of this
17 project in terms of the context of how the military is
18 hoping to change over the next several decades it
19 sounded like.

20 Apparently we're considering the way the
21 forces are being structured now is considered the
22 legacy force. What you're proposing is a component of
23 an interim force that will last, apparently, quite
24 sometime until we get to, I believe, the objective
25 force which is where this is theoretically leading us.

1 Am I understanding that correctly?

2 The third paragraph of your summary says
3 that the objective force would come out of the
4 development and refinement of weapons, equipment, etc.

5 That raises a bit of an alarm for me
6 simply because of the last experience I had in dealing
7 with comments being given on a military proposal.

8 And at that last event I brought up the
9 fact that I read in Center Defense Information's
10 current newsletter that Secretary Rumsfeld was asking
11 for that particular program's testing stages simply to
12 be eliminated because there was simply no need for
13 further testing. It was simply implement the program
14 and never mind, we don't need to test this anymore.

15 And I found some alarm in that because
16 as much as I have had concerns historically over the
17 years with military testing and various of its
18 iterations, I found I had more concerns when programs
19 are not tested. I'm fond of my skin that way.

20 And so I would like to ask for a
21 baseline discussion of the realities of the development
22 and refinements of the systems that you are proposing
23 to enhance our lives with here. That would be really
24 important to me.

25 This may be me being picky. But when

1 you say you want to transport soldiers more quickly to
2 areas of conflict, I would like to point out that
3 Hawai'i is the most remote land mass on the planet.
4 And it seems to me that using that as a resource to get
5 to other places quickly is very peculiar.

6 I grant you that things may be going on
7 east of here and you may want to just hele on over
8 there really quickly. But I would point out if you
9 schlepped these big things an extra five hours like the
10 rest of us always shlep when we go to California, it
11 makes more sense to me logistically in terms of the
12 supply -- have you ever tried to get fruits and
13 vegetables here?

14 You know how hard it is for us to get
15 things in and out of Hawai'i? There is a lesson in
16 that for us in all levels of our lives.

17 Let's see, I've already bitched about
18 that. (Laughter) Hold on a minute here. The purpose
19 of the proposed action is to provide realistic training
20 in Hawai'i. That doesn't make me feel very comforted.
21 From what I see of what's going on militaristically and
22 the rest of the planet that doesn't feel very good to
23 me.

24 And resource degradation, cultural
25 annihilation, sociological devastations are all things

1 we live with in Hawai'i more fully than people do in
2 other parts of the world. Being the endangered species
3 capital of the world, being the most remote land mass
4 we are more vulnerable.

5 As an aside I feel is relevant, when the
6 human Hawaiian population was met with the advent of
7 people who looked like me, within a few generations the
8 human population was completely devastated. And many
9 people know that.

10 What a lot of people don't know is that
11 the exact same parallels go on in the plant kingdom in
12 Hawai'i that within a few generations, our plant life
13 here Hawai'i was overwhelmed.

14 We're extremely vulnerable on more
15 levels than a person can even articulate. So you may
16 find us a more spirited audience than you run into in
17 other places. We like to show you the best.

18 In my perfect world we would not have a
19 military, ours or theirs or anyone else's because we
20 would be a society at peace with ourselves. That's not
21 the reality we're dealing with here. And I recognize
22 that.

23 Our current world does not allow that.
24 I understand that the military wants to evolve into a
25 leaner, meaner fighting machine. And in theory at

1 least I can agree with that.

2 But once again, size being a relative
3 thing here, while you're trying to create a smaller,
4 leaner, tighter machine, you're doing it in a
5 exceptionally small place. Hawai'i is one of the
6 smallest states of the nation. O'ahu maybe encompasses
7 10 percent of the land mass of one of the smallest
8 states in the nation.

9 And to put a project that might be
10 manini, small, in California or Texas -- Texas would be
11 my choice, (Laughter), but to put a project like that
12 in a place this small it is not tiny. It is absolutely
13 gargantuan. It is behemoth. And I have some concerns
14 about that.

15 I've known a lot of people in the
16 military from both sides of a number of issues. And I
17 know that very many people that I've dealt with have
18 genuinely wanted to do the best they could for Hawai'i.

19 And all people on all sides of issues
20 come in the whole spectrum. I have a lot of regard for
21 some of the people in the military that I have become
22 close with.

23 That, however, is not adequate to soothe
24 my jangled nerves when in July I was at a conference on
25 the mainland and I went to the Army booth. They have

1 millions of booths. They give you free key chains and
2 you take home key chains. But one of the booths there
3 was for the U.S. Army. And they had some interesting
4 stuff. I've always been involved in environmental
5 work. So they had a big display on the Army and the
6 environment.

7 Now, whether it's commonly known or not
8 the military, ours, theirs, and all of them, is the
9 primary polluter on this earth. And hence, an entity
10 with a larger responsibility than the rest of us have,
11 I believe, because that does encompass half of the
12 pollution this planet generates and it's nasty stuff,
13 quite a lot of it.

14 While I was at this conference in San
15 Francisco looking in the Army booth I was picking up
16 some stuff, some CD's on environmental protection from
17 the Army and key chains and bookmarks.

18 One of the bookmarks was detailing the
19 conservation efforts that the Army has made in any
20 number of sensitive locations.

21 And unbeknownst to me that's while Makua
22 was burning. I did not know that at the time. Things
23 happen in this world. Our risk is infinitely greater
24 than we can ever convey to you.

25 At that last meeting that I went to

1 where I brought up Mr. Rumsfeld's comments about
2 eliminating the testing stage, I did insert that as a
3 comment on the project at the time.

4 And, of course, the final EIS has
5 responses to people's questions and people's comments
6 as they have generated them in the production of that
7 document. So, of course, we all turn to our own
8 comments first, whether we admit it or not.

9 But I turned to find the comments that
10 had been generated by the input that I made. And I
11 found, not to my great surprise but to my
12 disappointment, that my comments were outside the scope
13 of the document and therefore would not be answered.

14 That's a very common response because
15 -- and it's a common response because people commonly
16 bring up questions because our lives are the context of
17 these programs are occurring in.

18 And we need the larger context and not
19 just the minutia that the attorneys require of you in
20 production of a document that is meaningful to our
21 lives.

22 So I'm going to ask you please to give
23 me real comments in your final EIS, both in response to
24 my verbal comments here tonight and the ones that I
25 will prepare in writing because they are not -- these

1 questions and concerns are not outside the context.

2 They are the larger context. Thank you. (Applause)

3 MS. LEE: Danny Li. Is Danny here?

4 Following Danny will be June Shimokawa.

5 MR. DANNY LI: Good evening. My name is

6 Danny Li. First of all, I do want to say that this

7 process is flawed. There are four people that were

8 arrested just previously because they wanted to bring a

9 sign in here.

10 The Army can bring their signs in here.

11 They can make the presentation. Why can't the people

12 who want to make testimony bring a sign? (Applause)

13 Having said that, I want to say that I

14 used to believe -- I used to believe in a lot of things

15 that the U.S. Army and the United States Government

16 says that they are upholding.

17 I was in ROTC 35 years ago in college

18 and I wanted to become an officer. But the more I

19 read -- that was the time during the Vietnam war. The

20 more I read the more I see. I began to understand that

21 we're not fighting to defend this country. It never

22 has been. Not since World War II.

23 In fact the way they control our way of

24 thinking is using the language. Before in World War

25 II it was called the Department of War. Then they

1 changed it to the Department of Defense. But let's
2 look at the history. A more appropriate term is
3 Department of Offense. Look at the history.
4 In 1950 the Korean people did not want
5 to invade the United States. 1958 the people in
6 Lebanon did not invade the United States.
7 In the 1960s the Vietnamese people did
8 not invade the United States. In '65 the Dominican
9 Republic people did not invade the United States. In
10 Grenada, in Panama, even Afghanistan, today Iraq they
11 did not threaten the United States.
12 They did not invade the United States.
13 All of them what happened? We bombed them. We invaded
14 them. Is that not offense? That's the real history.
15 So the ultimate test of any kind of
16 project or thing is what is it going to be used for.
17 That's the most important environmental question.
18 That's what we had to look at.
19 Whatever they're saying about how
20 carefully the environment is going to be protected or
21 how beneficial the economic benefits are, it's not
22 important.
23 The most important thing to understand
24 is what is the ultimate purpose of that project? Just
25 looking at history, history is the best guide of what

1 people will do next.

2 Look at the history since World War II.

3 I will guarantee you that all these training brigades
4 and Stryker, they will not be used to defend the United
5 States. They're going to be there in third world
6 countries subjugating them just like we've done ever
7 since World War II. (Applause, whistles).

8 MS. LEE: June? June Shimokawa.

9 MS. JUNE SHIMOKAWA: Aloha. I'm June
10 Shimokawa and I'm one of those granny types who was
11 standing outside. But I wanted to say something here,
12 so I left my sign and came in. I want to thank you for
13 the opportunity to speak and to offer comments on the
14 Army draft EIS. If I may I'd like to read my comments.

15 Actually I find it impossible to address
16 the particulars of the EIS because I totally reject the
17 plan of Stryker Brigades and reject, therefore,
18 stationing a brigade here in Hawai'i.

19 I have read that the Bush administration
20 is carrying out a fundamental shift in national defense
21 from a threat-based strategy to a capabilities-based
22 approach.

23 Rather than organizing the armed forces
24 to counter specific military threats against
25 identifiable enemies, the United States now seeks to

1 defeat any conceivable type of attack by any adversary
2 at any point in time from now into the far distant
3 future.

4 President Bush has stated that, "America
5 is following a new strategy. We are not waiting for
6 further attacks. We're striking our enemies before
7 they can strike us again." And I take that from the
8 "Star Bulletin" of October 17th.

9 Preemptive strikes can only be
10 interpreted to become perpetual war. And the Bush
11 administration is operating in pursuit of permanent
12 military supremacy.

13 These Hawaiian islands are strategic,
14 yes. But let it be said over and over again that this
15 is the homeland of kanaka maoli whose independence as a
16 sovereign nation was stolen by the United States.

17 It is unconscionable that the United
18 States has not only occupied and used vast quantities
19 of another nation's lands for its own military purpose
20 and now plans long-term use to pursue permanent
21 military supremacy.

22 The president says, "We will not be
23 permanent peacekeepers. This is not our strength or
24 our calling." That's a quote.

25 No, U.S. military forces must be agile

1 and lethal. How can he or any other American who hears
2 this say, God bless America? It is an insult, an
3 injury of the highest order upon the Hawaiian people
4 whose spirit is of aloha. If you can resonate with
5 anything that has been said, don't you feel a gut
6 wrenching hurt?

7 I say to us all, resist. Refuse to
8 support the strategy of military transformation
9 designed to destroy life except for those who have
10 wealth.

11 The growing disparity between the rich
12 and the poor in the world calls us to transform the
13 world in ways that preserve life and liberty for all
14 people. That is the American ideal by which we were
15 raised. Let us not destroy it. (Applause)

16 MS. AMARAL: Thank you, June. We
17 actually have come to the end of those people that have
18 registered to speak. And, so, albeit a little sooner
19 than we had intended, we need to bring.

20 UNIDENTIFIED SPEAKER: Because you
21 arrested four people that's why.

22 MS. AMARAL: Thank you -- we need to
23 bring this time of public comment to a close. We're
24 going to be meeting tomorrow at Helemanô Plantation,
25 Thursday at Makaha Valley Resort and next week Tuesday

1 at the Turtle Bay Hilton.

2 Just to wind up, and reminder, I'll come
3 back to the first comments I had made when we opened.
4 I helped facilitate the scoping meetings last year with
5 the Army. And I recall many hearings in which we were
6 being yelled at by the audience because we had to bring
7 the testimonies to a close at 10:00.

8 The janitors were closing the windows
9 and they were closing up the benches and we literally
10 had to get out of there because that public facility
11 closed at 10:00.

12 And when the Army reevaluated that, the
13 Army decided to come to a site that was not controlled
14 by the schedule of the site but that could be open to
15 the needs of those testifying.

16 Every site has its own rules and its own
17 limitation that the Army does not control that is
18 controlled by the site.

19 And it is important for us to recognize
20 the rules of each establishment that we go into and to
21 abide by those rules.

22 I want to thank those of you that have
23 gathered this evening for being so attentive to one
24 another, so respectful for one another.

25 I thank you for your well thought out

1 comments to us. Of course we look forward to hearing
2 from others within the community. Colonel, did you
3 need to say any final comments? Then we will call upon
4 Colonel Anderson for final comments and I'll do the
5 closing pule.

6 COLONEL ANDERSON: I want to first thank
7 Annelle and Miki for helping us here this evening
8 through this whole process. I want to personally thank
9 every one of you here tonight.

10 For those that commented, every one of
11 you that participated are, as Wendy said, world class
12 citizens for your contribution to this process. That's
13 important, as I stated earlier.

14 I want to especially thank the veterans
15 of our services, the Army, Air Force, Navy, Marine,
16 Coast Guard that one, stood up and made contributions
17 this evening, but more importantly have contributed
18 part of their lives to the service of our nation.
19 That's important.

20 And I genuinely thank you in particular
21 for the service you rendered and for your comments this
22 evening. There are no comments that are against or for
23 what's going on here tonight. This is a process by
24 which we genuinely solicit the input into our
25 Environmental Impact Statement because it is important.

1 I think as many of you have seen from
2 our initial draft or initial Environmental Impact
3 Statement to where we are on this draft, there have
4 been significant improvements and changes. I'd
5 highlight what the Nature Conservancy folks talked
6 about the way we try and work in solutions to
7 everything we try to this.

8 This Environmental Impact Statement is
9 not a final decision by the Department of Defense.
10 This is a decision-making tool that will be used to
11 determine whether or not the Strykers' actually fielded
12 here in Hawai'i.

13 Finally, for those of you who were not
14 able to give oral testimony this evening, we will
15 continue to accept written comments throughout the
16 comment period.

17 Again, I want to thank everybody
18 personally for attending this evening and for providing
19 us with these very, very important comments. Thank you
20 and mahalo. (Applause)

21 MS. AMARAL: If you will join me in
22 closing prayer, please. I call upon the gods of our
23 ancestors; I call upon that superior force by whatever
24 name you hold in your hearts and in your minds, to be
25 present with us at this time and to stand in our

1 hearts. Mahalo iau ona lani nui amama for the
2 gathering we have this evening. Mahalo for the feast
3 that we carry in our hearts. Mahalo for the wisdom.
4 We pray that You guide us each day to act with respect
5 towards one another. Guide our path as we move
6 forward. Protect our families and take us home safely
7 to them this evening. Amene.

8 (Proceedings concluded at 8:40 p.m.)

1 TUESDAY, OCTOBER 28, 2003, 6:29 P.M.

2 --o0o--

3 MR. RAGS SCANLAN: Well, I would speak in
4 support of the Stryker Brigade, or the military. I'm a
5 strong believer in military. It's what allows us to have
6 our freedom, and anything we can do to enhance their
7 ability to protect us is there. I know there's questions
8 about environment and everything else, but the areas that
9 they're going into are, basically, unused areas. So,
10 just briefly, I think for the environmentalists there's
11 not that much concern. If they're really concerned about
12 the environment, they should focus on tobacco companies
13 and developers; because once developers go into an area,
14 there's no turning back. There's more long-term damage
15 done on a day-to-day basis on the way society is today
16 than I feel in a military use of land. You can always
17 restore, although there's been bad stories. I think
18 Kaho'olawe is one example I think the military learned
19 from. The future is such that it will only be a plus for
20 us. Plus, economically, it's a great economic thing for
21 the state of Hawaii.

22 * * *

23 7:56 P.M.

24 --o0o--

25 MR. JOHN STEWART: When I looked over the EIS
PACIFIC REPORTING SERVICES UNLIMITED, INC.
(808) 524-PRSU

1 thing, there's one little section in there where they
2 talk about actually doing mitigation that benefits, which
3 is, they said, buffer zone acquisition, working with
4 non-profits to actually acquire lands for the
5 non-profits, and it's the only mitigation in the entire
6 EIS that doesn't just make things less worse; it makes --
7 it's actually something that gives the people something.

8 Like, all the other mitigation is, We'll wash
9 our gravel so there's no dust; but, I mean, you're still
10 making the road. And it struck me, that the only thing
11 in there -- and it's not something that they said they're
12 going to do, it's just something they said was a
13 possibility, that actually buying land that could be
14 converted for, you know, housing and taking away open
15 space in Hawaii and keeping it that way, along the edges
16 of the base, is something that is a benefit. It's -- I
17 don't know how to say it. It's a net plus as opposed to
18 just a bad thing made a little less bad. So I wanted to
19 just give my support for the one thing in there that
20 seems like it's actually giving us something as opposed
21 to giving us less of a bad thing. It's Number 35.

22 * * *

23 8:10 P.M.

24 --oOo--

25 MS. ROSEMARIE TUCKER: Well, you know, the Army

1 was invented to protect us; but who's going to protect us
2 from the Army? The land is the most precious thing we
3 have and the water and our natural resources. They
4 should be preserved for our children, not be threatened
5 by the Army.

6 Because I just had my first grandchild now, and
7 it makes me weep to think that we spend 399 billion, or
8 we did before 9/11, on supposedly defense, but no nation
9 on earth could possibly invade us because we're armed to
10 the teeth. We spend 8 billion on Social Security, and
11 that is threatened. Only 50 billion on housing; we have
12 so many homeless. It seems like military is like a
13 separate nation, doing what it wants to do without any
14 input from us, not real input. You know, we cannot fault
15 them anything. We cannot say we want to take some of
16 those billions and build houses for the homeless; we're
17 not allowed to do that.

18 (End of breakout session.)

PUBLIC MEETING)
8)

9

10 DRAFT EIS PUBLIC MEETING

11

12 Taken on behalf of the 25th Infantry Division and U.S.

13 Army Hawaii, held at Helemanô Plantation, Banquet Room,

14 64-1510 Kamehameha Highway, Wahiawa, Hawaii 96786,

15 commencing at 7:00 P.M. on Wednesday, October 29, 2003,

16 pursuant to Public Notice.

1 PROCEEDINGS

2 MS. AMARAL: Aloha. My name is Annelle Amaral,
3 and I'm here as one of the facilitators this evening.
4 Also with us, the other two facilitators, are Miki Lee
5 here and Karen Aka. So the three of us will be
6 co-facilitating for the evening.

7 So we'll let everybody gather up and come get
8 seated.

9 Before we begin, we'd like to invite Colonel
10 Anderson, who is the Garrison Brigade Commander, to come
11 on up and to make some opening remarks.

12 Colonel Anderson, are you ready?

13 Sorry, I didn't mean to rush you, Colonel.

14 COLONEL ANDERSON: Aloha, and good evening.

15 As Annelle said, I'm Colonel Dave Anderson, the
16 Garrison Commander here for the U.S. Army in Hawaii.

17 Thank you, Annelle, for introducing and starting
18 this meeting this evening.

19 On behalf of General Olson, the Commanding
20 General of the 25th Infantry Division, U.S. Army Hawaii,
21 I'd like to welcome you to tonight's community meeting on
22 the Draft Environmental Impact Statement for the
23 transformation of the 2nd Brigade, the 25th Infantry
24 Division, to a Stryker Brigade Combat Team.

25 Before we begin, I'd like you to -- I'd like to

1 tell you a little bit about myself. I've been here in
2 Hawaii about 16 months as the Garrison Commander. Before
3 that, I spent time in Washington D.C. and in Alaska for
4 many years. I've been in the Army about 24 years. My
5 family is from Utah, and we have a very proud heritage,
6 and we're pioneers that came across the United States and
7 immigrated from Europe.

8 Tonight we are here to listen to your concerns
9 and gather your comments on our Draft Environmental
10 Impact Statement. The facilitators tonight will
11 coordinate tonight's meeting and provide an effective
12 system for gathering that input. But, again, the purpose
13 tonight is to gather your input, because your input is
14 what's important as we refine and develop and complete
15 our Environmental Impact Statement.

16 About a year ago, we started on this with a --
17 we call it a Preliminary Draft Environmental Impact
18 Statement. And based on the scoping meetings and the
19 input from the community, we have made significant
20 changes to what is now our Draft Environmental Impact
21 Statement; and all of that is because of the input and
22 the science and the analysis and the thought that went
23 into accounting and mitigating those concerns and those
24 factors that were in the Preliminary Draft and that were
25 brought forward during our scoping meetings. So input is

1 very important. And it's important to us that we hear
2 that tonight and that everybody has an opportunity to
3 discuss their concerns with the Environmental Impact
4 Statement and with the potential fielding of the Stryker
5 Brigade.

6 This Environmental Impact Statement and this
7 Draft Environmental Impact Statement does not indicate a
8 foregone conclusion about Strykers coming to Hawaii. The
9 Environmental Impact Statement is a decision-making tool
10 that senior leaders within the Army will use to determine
11 whether or not Strykers come to Hawaii. It also does not
12 pre-suppose any decision has been made by the Department
13 of Defense on further Stryker fielding. So I want to
14 make that very clear. Because this is not -- the
15 decisions have not been made. And, in fact, what you say
16 tonight has impact on those decisions that will be made
17 in the future.

18 Your role is, this evening, to provide this
19 additional impact, as I mentioned, on not only
20 environmental, but cultural and any other concerns that
21 you believe should be addressed and analyzed in our Final
22 Environmental Impact Statement. The Environmental Impact
23 Statement is the most comprehensive document that can be
24 prepared under the National Environmental Policy Act.

25 I know that everyone is anxious to get started

1 and to provide that input to us, and we're anxious to
2 hear that input. And, so, without further delay, I'll
3 turn the time back to Annelle.

4 MS. AMARAL: Thank you, Colonel Anderson.

5 Seated at the table with Colonel Anderson are
6 two people that I would like to identify for you.

7 The first, farthest away from me but closest to
8 you, is Mr. Ron Borne. He is the Army Transformation
9 Manager and has been with this project ever since its
10 inception.

11 Also seated at the table is Mr. Mark Katkow.
12 Mr. Katkow is with the Office of the Judge Advocate
13 General and here to assist in providing legal advice to
14 the Colonel.

15 Seated also right here is a group of people who
16 assisted in the preparation of pieces of the Draft
17 Environmental Impact Statement. I hope some of you had
18 an opportunity during the Open House period to ask them
19 any questions that you may have about specific parts of
20 the EIS.

21 So the way that these gatherings have taken
22 place is that we meet from 5:30 to 6:45 to conduct what
23 we call an Open House, a chance for you to meet
24 one-on-one and have a conversation with the people who
25 assisted in drafting pieces of the EIS, ask the specific

1 questions that you need to ask, clarify any
2 misunderstandings you may have to better prepare you for
3 this period now, this public comment period. During this
4 period now, what we will do is, we will receive your
5 thoughts, your comments on parts of the Draft EIS that
6 has already been circulated. This is by no means the end
7 of the comments, just standing here this evening to
8 speak. If you have additional thoughts and additional
9 comments, you can submit it in writing and present it
10 to --

11 Oh, I'm sorry. She wanted to take her
12 microphone away. I'm not going to take that personally,
13 not in any way.

14 So you have until November 19th to submit your
15 comments in writing. If you noticed at the table
16 outside, when you signed in, Cindy Barger has her cards
17 there, and on this card are the addresses, fax numbers,
18 e-mail addresses, that if you have further comments to
19 submit that you can mail, fax, or e-mail those comments
20 to.

21 You also found out at that registration table a
22 comment card, where this evening you can write your
23 comments out and submit it on this, and you can add as
24 many papers as you want to it, and give it to Cindy,
25 because she's just looking forward to all of these

1 comments.

2 But the way this is conducted this evening is
3 that your comments this evening are on the record. We
4 have present a number of court reporters standing by,
5 taking what it is you have to say verbatim, and that will
6 be entered -- the transcript will be entered into the
7 record. For those of you that do not want to speak
8 before this audience, arrangements have been made for
9 another court reporter to meet in a private area, and you
10 can give testimony to her if you don't want to give your
11 testimony here now.

12 Also on hand is a videographer, who is taping
13 the proceedings as they take place here this evening.

14 So there are a number of ways for you to get
15 onto the record.

16 I introduced the facilitators early on. This is
17 a facilitated process. And the purpose of having
18 facilitators is to assist in providing a neutral, safe
19 environment, where everyone can be heard, where everyone
20 is treated with respect. Often what happens when we feel
21 very strongly about issues is that emotions run high, and
22 sometimes people are intimidated to speak if they feel
23 like they're going to be booed down or harassed in any
24 way. The facilitators provide for neutrality of voice.
25 We want to hear all of your comments. We may disagree

1 with what you say, but we never treat one another with
2 disrespect. We are never disagreeable with one another.
3 So we are all fully present to hear everything that you
4 have to say with great courtesy and to hear all opinions.
5 And the purpose of the facilitators is to assure that
6 that neutral environment exists.

7 We also, by the way, will watch for time and
8 assure that none of us get too long-winded and that we
9 can move this process through.

10 As you know, when we are -- maybe you don't
11 know. When we first started the scoping hearings a year
12 ago, we used to meet at public facilities; we met at
13 schools. And, invariably, what happened was, at
14 10:00 o'clock, the janitor started closing the windows
15 and slamming the benches and sweeping, and we had 15
16 people still lined up to speak; but that was the rules.
17 It was a public facility, facility closed at
18 10:00 o'clock; he didn't care how many people were still
19 left to speak.

20 In this part, then, of the public hearing
21 process, the Army, instead, has moved to a private
22 facility, where we can stay as long as we need to stay,
23 until all testimony is heard. We understand that when we
24 move to any facility, whether a public or private
25 facility, we deal with the rules of that facility. And,

1 so, some of the controversy you may hear go to the rules
2 of the facility. We accept the rules in the place that
3 we are in, and we abide by those rules.

4 Okay. I ask you -- what I'm going to tell you
5 we're going to do actually is, we've got cards of people
6 who have signed up to speak. If you are interested in
7 speaking, I would ask you to please step back out in the
8 room, at that registration table, and sign up, and
9 they'll bring the cards up to us. We'll call you up in
10 the order that you signed up. And what we'll probably do
11 is, we'll just call out the first three names so you know
12 that you're about to come up, then you can be ready to
13 speak.

14 Without any further ado, the first three
15 speakers are Evelyn Lane, then followed by
16 Blake McElheny, and Jackie Carlisle.

17 So, Evelyn Lane, aloha.

18 MS. EVELYN LANE: Good evening, everybody. My
19 name's Evelyn Lane, and I live over by Kawaihoa in
20 Waimea. And I have -- I wasn't actually going to speak
21 this evening, but I did have a couple of things that I
22 really wanted to question, and so I wanted to address
23 them to you all.

24 My first concern is the air traffic that is
25 going over those areas. First of all, since the EIS that

1 was done at the time of the Kahuku Training Area since
2 the condemnation was done back in -- I think '98, when
3 the military took over the actual -- you know what I'm
4 talking about -- there's been a gradual but persistent
5 increase of military air traffic over that area, even
6 more than just when there's major training activities;
7 and I know that for a fact since I've been there for ten
8 years. And I don't understand why there hasn't been any
9 more additional EISs that have happened since then,
10 because it's really become bothersome. And, so, I'm
11 concerned about significant more air traffic that's going
12 to be going on as a result of this EIS. And I didn't
13 really pick that up in the overall EIS at this time.

14 And I also -- whenever -- there seems to be,
15 also, a lot of blatant disregard for elevation of air
16 traffic. And that corridor, since there's -- the
17 military seems to want to take the air space for
18 exclusive use for the military now, so that -- I
19 believe -- that's what I read in the EIS -- that would be
20 no more private use over that corridor, if I was reading
21 that correctly in the EIS.

22 Could you -- maybe you could answer that
23 question for me. I'm not -- is that part of the EIS?
24 There's a reservation put on the air space there by the
25 military?

1 MR. BORNE: The air space -- because the Stryker
2 Brigade is a part of Transformation, it doesn't have any
3 aircraft as a part of it. I believe we just say that the
4 air space will be used for -- as it is today. And the
5 central part of the Kawaihoa Training Area is not a part
6 of military-restricted or military-only-use air space. I
7 do not believe that's in the EIS.

8 MS. EVELYN LANE: Okay. But there is something
9 in there that says that the -- that there's a request for
10 a reservation or a hold to be placed on the air space
11 over the training area, someplace in the EIS? Maybe
12 somebody that specialized in that area -- I'll bring it
13 up at the next EIS meeting and I'll try to point it out,
14 because I did read somewhere --

15 MR. BORNE: We'll try to get you a better
16 answer. I do not believe it's in there for the Ko'olaus.
17 We talk about Schofield, but not the Ko'olaus. We'll get
18 you a better answer.

19 MS. EVELYN LANE: Okay. So my next question on
20 that was, procedurally speaking, just regarding this, I
21 was concerned about the locations of where we were having
22 the meetings, that they seem to be a little bit remote,
23 and some of the places are, like, in hotels and that sort
24 of thing; so I didn't think that was a very good idea for
25 having these meetings.

1 And I also think that we should have a longer
2 comment period, because 45 days for -- the EIS is a
3 pretty big document to get through for a lot of people.
4 I think that's a little bit too cumbersome.

5 And I'm concerned about the safety record of the
6 Army, especially after the controlled burn that was out
7 at Makua, the live fire -- the controlled burn that
8 happened recently and that it went out of control. I had
9 just hiked up into the -- I was there for one of the
10 hikes just before Easter, and we were allowed, with an
11 organization that I belong to, to go up and participate
12 in one of the hikes there, and then a few weeks later
13 that whole area was burned. And, so, it was pretty
14 devastating for us, after being allowed to go there and
15 see how beautiful Makua had become, and then to see it,
16 you know, devastated by a controlled burn that had gotten
17 out of control.

18 So, also, after Kahuku, the range had been
19 placed into the hands of the military, when the Black
20 Hawk crashed at Kahuku. There were -- it's very close to
21 a lot of homes of people that I'm very close to. And I
22 am really concerned because the helicopters fly directly
23 over my house, and my neighbors and I have become, you
24 know -- it's really scary, you know, to hear this type of
25 activity, day-in, day-out, and more persistently. And I

1 personally suffer from a stress-related disorder, and I
2 moved back home to Hawaii, where I was born, and I'm
3 grateful. Because I am an Air Force brat, and so I know
4 that, you know, I wouldn't be here if it wasn't for the
5 military. But this is a residential area now, and it's
6 not -- you know, it's not a military base any longer.
7 Sorry. But, you know, this is just a little bit too
8 close for people to have live fire training activities
9 and helicopters, you know, flying, zooming over your
10 house.

11 And, also, I think because of the reverberation
12 of all of these trucks and these helicopters and things
13 flying around that it's why Waimea rock slides are
14 happening and why our roads are being closed down.

15 Also, I'm concerned because -- I'd like you
16 to -- I'd really like to have a question answered that --
17 the military, you know, says that they really want to
18 take care of the endangered species here on the island
19 and that they're very good land stewards; but it was just
20 this month that the military or the Pentagon asked
21 Congress for an exemption to the Endangered Species Act.
22 So I would like you to explain to me how it is that I can
23 trust you to prevent wildfires that are supposed to be
24 controlled, make sure that you're not going to have
25 helicopters crash on top of my house, and make sure that

1 next month, if you have what you say you want, a road up
2 across Waimea Valley, that you're not going to destroy
3 endangered species or any other species that are
4 endangered in any other protected areas. Why should I
5 believe the Army, that they would do that, if they're now
6 seeking that they won't come back every single year and
7 ask for an exemption here on the Hawaiian Islands or on
8 Guam or on American Samoa, how can I trust the Army to do
9 that? Let alone, to not -- to take care of my
10 well-being? I know that you're from the Government and
11 that you're here to help, but I'm also a person that
12 you're supposed to be helping, as well as the endangered
13 species on this island and all the other Pacific Islands.
14 So I would like to have an answer as to how it is that
15 you can one day say you're going to take care of
16 endangered species and then the week before have asked
17 for an exemption. That I would like an answer on.

18 (Applause)

19 MS. AMARAL: Thank you.

20 What I want to clarify for people is, that as I
21 had said in my opening remarks, this is a time for us to
22 hear public comment on the Draft EIS; and the recorders
23 are all here to take your comment. We had an opportunity
24 to talk one-on-one to one another. And, so, as much as
25 possible, we'll make note of your comments; we'll put

1 them in our Draft EIS. If there are ways that they can
2 be answered, the next document, the Final Draft EIS, will
3 try to respond to the questions. If it is out of the
4 purview of this EIS, then it will not be responded to.
5 So I think -- we are not, however, going to be able to
6 answer all of your questions this evening, and we're not
7 going to go back and forth trying to. It's taken you a
8 while to come up with questions in your review of the
9 document; I think it will take some of the drafters of
10 this a while to come up with some answers to it.

11 Thank you very much.

12 I did neglect one very important thing; and
13 Noelani was standing at the back of the room, looking at
14 me. Noelani Arista is there, waving at you, in the red
15 shirt. She is a Hawaiian language scholar. She is able
16 this evening to provide translation services to anyone
17 who wishes to give their testimony in Hawaiian. What we
18 would ask you is, if this is your preference, if you
19 could sort of meet with her previously, because she needs
20 to know whether you want simultaneous translation or if
21 you speak first and say everything and then she speaks
22 afterwards; so that sort of has to be coordinated. But
23 Noelani is here to assist you if you want to.
24 Olelomakuahine.

25 Mahalo.

1 Blake McElheny, followed by Jackie Carlisle,
2 followed by Thomas Shirai.

3 MR. BLAKE MC ELHENY: Thank you.

4 Good evening, everybody. My name is
5 Blake McElheny. I'm a resident of Pupukea, out here on
6 the North Shore. Thanks again for the opportunity to
7 provide comments. My comments are specifically going to
8 focus on the effects of the SBCT on the area commonly
9 known as the North Shore.

10 I think at the outset that it's probably
11 important for us to recognize that there's both
12 beneficial and I guess you would say adverse impacts from
13 the preferred alternative. And I think, as a community
14 member, I'm interested in finding out some of the ways to
15 mitigate the adverse impacts while simultaneously
16 allowing the military mission to proceed, with some
17 respect for, I guess, the community and conservation
18 interests along the way.

19 In reading the DEIS, I was really pleased to see
20 what I think is Item Number 35 in Volume I, the Executive
21 Summary. It's a potential mitigation measure called,
22 Investigating a new regulatory authority to work with
23 non-profit organizations to purchase what's called
24 "buffer lands" as potential mitigation purposes. As I
25 understand it, this mitigation, as conceived in the

1 current draft, was meant to talk about how to mitigate
2 effects on natural resources; but I think that there's
3 other mitigation that could be considered under this
4 purview, particularly ones related to dust, air quality,
5 noise, potential fire hazards, as well as runoff and
6 effects on water resources. So I think it's pretty
7 interesting. I was hoping that this process could be
8 utilized to examine the opportunity to see if there's
9 some interest, potentially in exploring acquisition of a
10 parcel that's called the Pupukea Paumalu Homestead. It's
11 adjacent to the existing Pupukea area and touches upon
12 what I believe to be state lands that are leased to the
13 military for the Kahuku Training Area.

14 As I understand it, these types of buffer zones
15 shield military readiness activities and lands from
16 what's called "encroachment" related to incompatible
17 residential developments or other types of incompatible
18 uses; and I think it's called an Army compatible use
19 buffer, or ACUB. So I was thinking that maybe this could
20 be used to protect the training capability and also
21 protect the natural and other resources in the area, if
22 possible.

23 And just for people to know, as my understanding
24 goes, you would use Department of Defense funding or
25 other sources of funding, but that property would

1 actually be held by and managed by a private conservation
2 organization or some other type of arrangement. So it
3 seems like it's fairly interesting.

4 And I think that this particular opportunity
5 meets the criteria for selecting ACUBs, including
6 potential severe encroachment impacts of (inaudible),
7 effects on endangered species, air space, noise, air
8 quality, water resources, and it's possible to reverse
9 this encroachment by taking the step of the ACUB.
10 There's available land; the land is currently for sale.
11 It seems to be a time-sensitive issue. There's a lot of
12 different growth and activities happening out here. And
13 so far there's been a high degree of support, both from
14 the community and other interested local governmental
15 officials that we've talked to about this opportunity.

16 And just -- I guess highlight a little bit more
17 about why it might be a good opportunity. This
18 particular property is the only large continuous parcel
19 adjacent to the KTA that has such a high threat of
20 incompatible and -- incompatible uses or encroachment in
21 the near future. There are several private organizations
22 with conservation objectives that are seeking to preserve
23 some of the habitat and other resources on the property,
24 and it just seems like this might be a good win-win,
25 capturing both the community support, the government

1 support, and trying to find ways to both protect military
2 readiness and conservation of important environmental and
3 other resources.

4 So I guess tonight I just wanted to open up a
5 dialogue -- not right now, but in the future -- with some
6 of the relevant parties and see if we might be able to
7 either work it out here or in other areas that the ACUB
8 might be a potential. I think it would be a great way to
9 maybe give back -- I guess -- how would you say? -- in
10 return for some of the adverse impacts. I know that -- a
11 lot of ways that the military already gives back to the
12 community, but it might be an additional way for everyone
13 to feel comfortable with the uses and things like that.
14 And I just wanted to say that from a community
15 perspective, I'm willing to do whatever we can do to try
16 and see if it might be possible to try and work something
17 out. So thanks for the opportunity.

18 (Applause)

19 MS. AMARAL: Thank you.

20 I was just asking Mr. McElheny if he wanted to
21 leave testimony behind. He'll take care of that matter
22 later.

23 If you have testimony written and you want to
24 just hand it in, then we are more than happy to take your
25 written testimony and insert that into the record; so

1 that's fine.

2 The next speaker is Jackie Carlisle, followed by
3 Thomas Shirai.

4 Jackie?

5 MS. JACKIE CARLISLE: Hi, aloha. Hi, I'm
6 Jackie Carlisle, and greetings.

7 Thank you for this Draft Environmental Impact
8 Statement and for the opportunity to send in written
9 comments. After considering the 2nd Brigade that was
10 selected to transform to a Stryker Brigade Combat Team in
11 the program and Environmental Impact Statement, there are
12 two items I base my written comments on: First, in
13 Executive -- in ES 3, the Need for the Proposed Action,
14 and second, in 3.2.1, Introduction to Regional
15 Influences.

16 The three factors stated in Executive
17 Statement 3, Need for the Proposed Action, states, one,
18 its location within the Pacific Rim is a critical area of
19 interest for the United States; two, Hawaii provides the
20 terrain and conditions most likely to be encountered in
21 the Pacific Rim; and three, the ease of deploying the
22 Stryker Combat Team because of the proximity, to multiply
23 the air bases are suitable.

24 You know, to me, this is absurd, and I'm pretty
25 sure you can come up with better reasons. With more

1 military expansion in the Hawaiian Islands, the islands
2 will be a perfect target for today's new terrorists that
3 still have not been caught.

4 I'm sure it is an honor to have been selected
5 from a long list of locations to deploy, that are deeply
6 rooted on planet Earth; but how many of the United States
7 of America's U.S. Army acquired another 24,400 acres or
8 hectares to accommodate the Stryker should not be allowed
9 in the Hawaiian Islands (sic).

10 It is essential for North America and her
11 political bodies and societies of men who have united
12 together to combine their forces in order to procure
13 their welfare and their security for its people, as is
14 other foreign nations. But to strike or deploy from the
15 Hawaiian Islands to anywhere in the Pacific Rim within 96
16 hours, to place a division in the Pacific Rim within five
17 days or five divisions in 30 days, without compensation
18 to the Hawaiian people or their Hawaiian government, is
19 unjustifiable. Certain lands in the Hawaiian Islands
20 that the United States uses for certain military actions
21 result in one silver dollar for every 65 years. The 1849
22 treaty, the treaty with -- Friendship Treaty, Commerce
23 and Navigation (sic) between the United States and the
24 Hawaiian Islands is the supreme law of the land. The
25 proposed action for the Stryker Combat Team is contrary

1 to the advancement of the de jure Kingdom of Hawaii. The
2 use of the 24,000 acres of land in the Hawaiian Islands
3 will not help the Army to deploy the strategic maneuvers
4 any faster in 30 years, and I'm pretty sure they're going
5 to upgrade that Stryker. You know, I hope they put wings
6 so they can fly over there. How can the Stryker swim
7 across the ocean? I'm sorry. I feel that when the
8 de jure Kingdom of Hawaii reinstates itself as a free and
9 independent sovereign nation, I feel that the combat --
10 Stryker Combat Team will strike the Hawaiian people in 96
11 seconds.

12 According to Section 3.2.1, Introduction to
13 Regional Influences, the definition of ceded lands, I
14 would have to object to this definition. There is no
15 such thing as ceded lands. I recommend you change the
16 "ceded lands" to "stolen lands". You reveal the Republic
17 of Hawaii was annexed, and, yes, it was. But the title
18 holder for the Hawaiian Islands is the Kingdom of Hawaii.
19 And they were not annexed. The kui petition proves that.
20 Therefore, the ownership endures, that the Hawaiian
21 Islands belong to the Hawaiian people and their Hawaiian
22 government. I recommend the Brigade does not transform
23 in Hawaii and suggest that they transform in Guam or
24 America Samoa or another place in the Pacific Rim. I do
25 agree to the five other locations for the Stryker Combat

1 Team because it will help the United States of America.

2 Thank you for considering my written comments.

3 Mahalo.

4 (Applause)

5 MS. LEE: Thank you, Jackie.

6 Our next few speakers, just so you know who's

7 coming up, is Thomas Shirai, Jake Ng, and then

8 Oliver Lunasco.

9 And just to remind folks who are here to give

10 comment on the Draft EIS: If you have any particular

11 section that stood out for you, we'd love to hear from

12 you.

13 So Thomas Shirai, please.

14 MR. THOMAS SHIRAI: Good evening, everyone. I

15 was caught off guard because I seen the number 14 instead

16 of 4. So I was just trying to meditate and build up my

17 concentration to that point; so I was caught off guard.

18 Aloha. Thank you for coming to Waialua. When I

19 say Waialua, Waialua means kukaniloko, all the way to

20 Kaena Point, and to Waimea, the biggest moku on this

21 island.

22 We in Waialua, my ancestors are from Waialua, so

23 I going talk about Waialua. I don't go to other places

24 to talk about my home and my ancestors.

25 Before I start, I would like to take --

1 sincerely ask for five seconds to fifteen seconds of
2 silence to remember all those kupuna in Waialua. And
3 what I going talk about in what you folks call DMR, I no
4 call that. I call that Kawaihapai. So please bear with
5 me.

6 (Moment of silence.)

7 MR. THOMAS SHIRAI: Okay. Thank you, everybody.

8 Since you have a court reporter, I'm going to
9 read from this paper. I usually don't, but it's record,
10 and we need to be on record. I have extra copy, and I'm
11 going to give it to the lady.

12 Aloha. I'm grateful for the opportunity to
13 provide comments regarding this highly impacting
14 proposal. This has a double-sword effect on me, because
15 I served in the U.S. Coast Guard, and I'm very proud and
16 tuned in to my ancestors, heritage, and culture. I
17 served about ten years active duty in the Coast Guard,
18 and in my tenure I earned the most prestigious medal that
19 you can obtain; it's also the mission statement of this
20 branch of service. And I'm proud to say that I am one of
21 only about one hundred fifty Coast Guardsmen to receive
22 this honor. It is the Coast Guard medal earned for
23 extreme heroism during a search and rescue mission and is
24 in same standings as a Bronze or Silver Star, Navy Cross,
25 Legion of Merit, and many other known decorations. It's

1 right after -- it's Number 11, after the Legion of Merit
2 in standing order. I would say that's quite an
3 accomplishment.

4 I understand readiness and the necessity to
5 train. However, given the proposal to expanding land
6 acquisition leaves me with great reservations to the
7 already enormous land assets that the military has
8 already. Having said this, I now address my heritage
9 side.

10 Despite my feelings of both good and anger, the
11 problem starts within my own ohana. And I can't totally
12 channel it to the military; however, it doesn't mean that
13 I totally forget the military. I am here to provide
14 comments on a special project named DMR, but will always
15 be called by its rightful God-given and family name,
16 called Kawaihapai. This is the beginning of my beloved
17 grandfather's, David Peahi Keao, Jr., family. In 1850,
18 during the time of the mahele, my great, great, great,
19 great grandfather, Isoba Keahilele, formed the hui and
20 bought land from King Kamehameha III and was awarded as
21 an original patent to generation. My ancestors practiced
22 malama aina, and it flourished richly up to the time --
23 during the time and tenure of my great, great
24 grandfather, Kaaemoku Kakulu, who was the last, the last
25 konohiki of Kawaihapai.

1 As previously mentioned, both the kai and the
2 aina produced bountiful food subsistence. My great
3 grandmother, Clara Napuakekau Kakulu, was a very special
4 keiki, of which she was a great beneficiary and owner of
5 several pieces of land within Waialua moku. This is
6 where I talk about the problem is at home, before the
7 Army. Much greed and jealousy evolved within her own
8 ohana, to take away and erase her and her father,
9 Kaaemoku Kakulu. The outcome was both devastating.
10 My great grandmother become an outpatient at
11 Kalihi Hospital, while years later her father, Kaaemoku
12 Kakulu, had the aina he loved greatly taken away from
13 him, which was prior to World War II. He was never
14 allowed to visit his land again. The death certificate
15 says chronic depression. No, no, no, no, no, no. He
16 took his life. You killed him. My grandfather was
17 raised at Kawaihapai and came much from his grandpa, who
18 was Kaaemoku Kakulu. These included fishing and cow
19 cultivation. He was awarded the Silver Lifesaving Medal
20 from the Commanding Officer of Schofield Barracks in 1940
21 for rescuing an infantryman from drowning at Kawaihapai
22 Beach. I have that document.
23 Also, he helped build the airfield and was
24 well-known in the community for his carpentry skills.
25 His living testament is why Kotake Store is still

1 standing today. He built it and was the supervisor. So
2 that should tell you that one Hawaiian is pretty darn
3 smart. And that man, my grandpa, I would say never
4 passed the eighth grade. Everything was self-taught and
5 innovated.

6 Prior to land acquisition of Kawaihapai, the
7 Bishop Museum in 1933, Archaeology of Oahu, McAllister,
8 and in 1940, The Hawaiian Planter, Handy, interviewed my
9 grandfather's father, who is also named David Keao. They
10 misspelled it but -- I tried to get them to correct it,
11 but there is no plans. His grandfather, Kaaemoku Kakulu,
12 and his grandma, Annie Keahipaka, was later consulted by
13 Bishop Museum in the early 1990s for update information
14 about Waialua and Kawaihapai. I'll leave it at that for
15 that section, because he said, "Enough already."

16 This tells me that the military was well aware
17 of the Hawaiian historical, cultural, spiritual, and
18 geographical features of Kawaihapai prior to western
19 habitation and military occupation. Furthermore, I
20 believe that the mana'o shared by my kupuna were ignored,
21 which resulted with desecration and included burials of
22 some of my ohana.

23 I'd like to note that the Bishop Museum is
24 supported by the Lowell Dillingham Trust. That was my
25 (hawaiian word), because I'm the proponent of Act 276,

1 renaming the airfield to Kawaihapai. I asked them for a
2 small favor from an old friend and the (hawaiian word)
3 was when my membership expired. This project is funded
4 by the Lowell Dillingham Trust. I know the answer
5 already. I get that paper, and I get one framed up to
6 remind me.

7 This tells me it wasn't enough to acquire and
8 desecrate sacred aina but to replace its geographical
9 identity, similar to the adoptions when Hawaii was a
10 territory. You could create a brand new, unheard of
11 person in the territory in that days. This showed me the
12 political, social, and racial prejudice of an entity that
13 I have served very proudly. I promised my grandfather to
14 make things pono, and that is why I initiated it. And it
15 is now law, as previously mentioned.

16 Now the law is to airport's rightful and
17 God-given name, Kawaihapai Airfield, in honor of not only
18 my kupuna, but all the people that live at Kawaihapai.
19 It will be very selfish of me to say I want name this
20 airfield Kaemoku Airfield. That's arrogance to my own
21 heritage. We are not taught to be better than God.

22 This is an excellent opportunity for the Army to
23 make things pono. I continue to strive to make things
24 pono with the Army and to hold it accountable for their
25 actions.

1 There is also psychological impacts regarding
2 past actions and methods executed for land acquisition.
3 The Kawaihapai Military Reservation, that was the
4 original name, was done in a similar fashion through
5 easements, which transpired to a considerable amount of
6 land. As stated, training is essential and understand
7 what readiness implies. However, if this trail must be
8 done, then my comments are simple. And it goes like
9 this: Stay on the road or no road at all. Least wanted
10 scenario. The existing cane haul roads were originally
11 designed to accommodate the unique cane haulers'
12 Turn-A-Tows, which are similar to large earth movers used
13 in mining and is much larger and heavier, approximately a
14 hundred tons fully loaded and thirty to forty tons empty.

15 The love for my grandfather and his ancestors,
16 I've received much signs. We call that (Hawaiian word).
17 Every time I look the clock, I see the grant number.
18 Every time I look the clock, I see one type airplane.
19 Yeah? All those kind of things. I know what -- I know
20 what they talking about. It gives me hope. It's a
21 spiritual connection. They trying to say something.
22 That tells me that pono is only near and now. To make
23 things right, put the name back. I not gonna tell you
24 again: Put the name back. Much accidents and incidents
25 have been encumbered for approximately 65 years, which

1 resulted in some fatalities. Some others, including
2 myself, know why. Again, put the name Kawaihapai back on
3 the airfield. Respect is the key. Remember, sacred land
4 to some, cursed land to others.

5 Lastly, I sincerely and humbly request for the
6 Army -- and this is the kind of person -- you never hear
7 me talk about access or land or money or anything; this
8 is me talking and how I was taught. I sincerely and
9 humbly request that I be permitted once a month to gather
10 one dozen red gingers from Schofield Barracks or Fort
11 Shafter to take as ho'okupu for my kupuna to the
12 cemetery. That's the kind of person I am. That makes
13 things a lot better. This will continue the process.

14 The last comment I make, Dillingham name. We
15 have Dillingham Ranch. We got all these Dillingham name.
16 The fountain in Kapiolani Park is called Dillingham.
17 There is an airport in Alaska called Dillingham. Super
18 Fund. Give back something. As I said, I was in the
19 service. Give us back something. No take everything.
20 That's all I ask. Very simple. Very humble. And then
21 God be with you.

22 Mahalo.

23 (Applause)

24 MS. AMARAL: Mahalo.

25 MS. LEE: Thank you, Thomas.

1 I was reminded to make a few announcements. For
2 those people that might have come in in the last few
3 minutes, if you wish to give testimony and you'd like to
4 do it up here, there's a little sign-up sheet out in the
5 front. If you haven't done it, go ahead and do that, and
6 we'll add you to our roster. If you wish to give comment
7 or testimony and you don't want to stand up front, there
8 is a court reporter, like the one here, outside, who's
9 just waiting to sit with people and hear what you have to
10 say. And, of course, you can put it in writing for us if
11 something strikes you after the meeting. We welcome that
12 up through November 19th.

13 And I was also asked to tell you about how many
14 speakers we have left; and it's growing. I'd say about
15 ten at this point.

16 And one more reminder: If you have a cell phone
17 on, could you please turn it on "silent" for us. Our
18 recorders pick it up; our cameras pick it up. So,
19 please, we'd appreciate that.

20 Next we have Jake Ng, followed by Oliver.

21 Is Jake here?

22 MR. JAKE NG: Thank you very much.

23 Aloha, Colonel.

24 COLONEL ANDERSON: Aloha.

25 MR. JAKE NG: Thanks for the opportunity to

1 provide my comments.

2 This evening what I'd like to do is to comment
3 on two subjects. The first one will be on the Wildfire
4 Management Program. Second subject being the Helemanô
5 Trail.

6 As we all know, wildfire has been on our radar
7 screen for quite a bit, for the last few days, because of
8 the California wildfire. But here on the North Shore, it
9 was on our radar screen a month ago. One thousand acres
10 of land on the North Shore was ravaged by wildfire.
11 That's why we, the residents of North Shore, are
12 sincerely concerned about the Wildfire Management Plan or
13 lack thereof. What I'm saying, Colonel, is that we need
14 to be more specific as to the kinds of fire protection
15 that your people will be doing for the North Shore.
16 There are 12,000 acres of vacant land on the North Shore,
17 and you will be traversing on land that -- you know, a
18 field that's readily combustible, as evidenced by the
19 fire last month. The fire went through three of the
20 gulches, and they dropped from one gulch to the other
21 gulch, and they all converge in one little place they
22 call Hukilau Loop, about 60 houses. That's where the
23 fire came to. Colonel, it was real scary, let me tell
24 you.

25 The fire department did a tremendous job in

1 attempting to control the fire, but it was beyond their
2 control. So what did they do? They let it burn. They
3 let it burn, somewhat of a controlled burn. So that's
4 what I'm afraid of. If you have a plan to procure, for
5 example, a water pumper, a sophisticated water pumper
6 that can hold like 100,000 gallons or 50,000 gallons of
7 water -- Colonel, out in the wild you don't have fire
8 hydrants; so if a fire were to occur, where's the water
9 going to come from? Is it going to say that they're
10 not -- let the fire go -- get down to Hukilau Loop to
11 Haleiwa and Waialua? That's what we're afraid of. So we
12 need to look at the kinds of equipment you have and what
13 did you propose to do to contain and control the fire,
14 specific programs. And I don't see that in the -- in
15 your draft statement. Perhaps it's coming later. But be
16 that as it may, that's a major concern of the North Shore
17 residents.

18 Okay. The second subject concerns the Helemanô
19 Trail. This is a trail where perhaps a hundred of your
20 vehicles will be traveling from Schofield, down Helemanô
21 Trail, to Dillingham Air Force Base, Kawaihapai Air Force
22 Base. The area that your equipment will be traveling
23 will be when you cross Kaukonahua Road, right below
24 Hukilau Loop, the major highway that goes to Haleiwa.
25 Can you imagine 100 vehicles crossing this highway? I

1 believe you have discussed this with the Dole Plantation
2 folks, and they have made recommendations to you. So my
3 suggestion is to heed their suggestion and to alter that
4 portion of the Helemanô Trail that bisects Kaukonahua
5 Road and deals an outlet site, because the residents of
6 Hukilau Loop, for the last, maybe, 25 years, have
7 experienced either rumbling, the noise, the dust from the
8 cane haul road for a long, long time. So when the
9 plantation ceased to operate, everybody yelled, Hurray!
10 No more cane haul road! But now, Colonel, we have the
11 Strykers coming into us. So if you could take that into
12 consideration, we would appreciate it very much.

13 Aloha to you.

14 (Applause)

15 MS. LEE: Oliver?

16 MR. OLIVER LUNASCO: Good evening.

17 First of all, I want to thank you, Colonel, for
18 giving us the opportunity, you and your team, to comment
19 on some of the problems we're faced with.

20 I'm Ollie Lunasco, better known in the district
21 as Ollie Lunasco. I utilize the area very frequent.

22 And just to expand what Jacob Ng has mentioned
23 about wildfires: Are there any of you familiar with the
24 area? If you've traveled the areas that you're talking
25 about, it's all overgrown by guinea grass. At one time I

1 was employed by Waialua Sugar, and the Army inadvertently
2 caused a wildfire in the Kawaihoa Training Area. It took
3 us over a week to put it out. It covered more acres than
4 Jacob mentioned, this recent one.

5 As he also mentioned, there's no fire hydrants.
6 You cannot just plug in and get water up there. So it's
7 very critical that you have a fire prevention system up
8 there. The landowners are not maintaining the land, so
9 it's all overgrown. The Bishop Estate has cut fire
10 breaks; but if you already know how fire travels during a
11 windy day, it will travel through that fire breaks.

12 Also, my biggest concern, while the Army always
13 want to be partners, once they implement a project and
14 it's completed, unfortunately the general public gets
15 shut off. As an avid outdoor person, I utilize the Drum
16 Road, which cuts from Helemanô Military Reservation all
17 the way to the Kahuku Training Area. In that area we
18 have two public recreational areas. Presently, one is
19 closed by Dole; we have no access. We trying to get
20 access through the military reservation, to use Mumuhua
21 Trail. The second one is at Pupukea. It's a public
22 recreational area.

23 Why I say once the project is completed, we've
24 had cases -- or we had a case where a friend of mine who
25 was hunting in the area happened to be on the road; he

1 was walking his dogs down into the ravine when an MP
2 came. Now, after talking to some of your people, they
3 said maybe the MP had an attitude problem. But that
4 didn't prevent him hauling that individual, with his
5 dogs, over to Schofield Barracks to be booked. The only
6 thing that got him off the hook, when he was apprehended,
7 he mentioned to the MP, "What about that other guy who's
8 riding the motor bikes?"

9 The MP told him, "We're not here to arrest him.
10 We're here to arrest you." After he explained to the
11 commanding officer what happened, they released him.

12 Now, your range control has been really good.
13 They've told us to keep off the road. If we're going to
14 be in the area, park well off the road. Most people are
15 pretty reasonable. If they ask us to leave, I mean, we
16 won't fight; we just leave. So I want you or any ASA in
17 the Environmental Impact Statement to include when the
18 road is not in use that public can use it. And, you
19 know, I've used that road for over 50 years, with my
20 father, and now with my son. And inadvertently, as I
21 said, we've gotten kind of leery about traversing that
22 road because of the problems that have -- you know, a
23 person had faced with your military.

24 Now, ever since 9/11, you know, I understand
25 some of the problems you're faced with. But you gotta

1 understand, that we as a general public -- and, you know,
2 everybody will agree with you that North Shore is one of
3 the last remaining recreational areas, open space, and
4 the only reason it was open is because of the farming
5 that has been continued. Unfortunately, with the demise
6 of Waialua Sugar, all these lands are open. And, so, I
7 would hope you would take a look at that and assure that
8 people, you know, will have the use of the mountain
9 areas. I know right now we're fighting with various
10 powers to get recreational areas at the ocean. And I
11 hope with this Stryker Division -- because you're going
12 to cut a road from Schofield all the way to Dillingham
13 and improve the road from -- from Helemanô radio station
14 all the way to Kahuku. So you -- you know, you talking a
15 sizeable area that you're going to have control over. If
16 you deny access, you know, a lot of us won't be able to
17 enjoy the outdoors.

18 (Applause)

19 (More proceedings were had on the following page.)

20 / / /

25 / / /

1

2 MS. LEE: Before our next speakers come
3 up, just a reminder that we're keeping our comments to
4 about five minutes, if possible. If you are submitting
5 written comments you don't need to read them verbatim
6 because they'll already go into the record verbatim.
7 You might want to pull out the highlights you think you
8 really want to be heard.

9 The next three folks coming up are
10 Keli'iwai, Bud and Ohana. Is Keli'iwai here?

11 MR. KELI'IWAI CAMARILLO: Aloha,
12 everyone. I'm Keli'iwai Camarillo. First off, I grew
13 up here. Stone's throw away from Bellows and a stone's
14 throw away from Mokapu. Or as we like to call it
15 Mo'okapu.

16 I also come from a family of engineers
17 so I can understand and review that. I've seen a lot
18 of these reports before. I can pick up and disagree
19 with or argue with any of these.

20 A couple of the big ones, though, is
21 cultural. You guys are talking about culture and you
22 guys have plans that say that you guys have analyzed it
23 or sensitive to it.

24 But right now you guys have this
25 commercial on where the Army -- that's talking about

1 "Pahakuloa", talking about them blowing up 25,000-tons
2 of dirt over there. Actually it's Pohakuloa. And if
3 you guys had spent a little bit more money on a
4 cultural expert instead of on your advertisement you
5 guys might have learned that.

6 Now, these places that you guys are
7 acknowledging as culturally important, the mitigation
8 for it is that if it's in the way of what you guys want
9 to do you will document it and then continue doing what
10 you guys are doing.

11 Now, we're here talking about the EIS.
12 In order to talk about it we have to talk about
13 precedence you have set already in your actions here
14 and your precedence have shown that you don't deserve
15 to be here.

16 You're not wanted. You don't deserve to
17 be here. You do not respect the land. You do not
18 respect the wishes of the people.

19 A key point Mo'okapu. You dug up 3,000
20 bones from that place. Ah, it must be a graveyard.
21 Instead of giving the bones back you guys held onto it,
22 entrusted it to Bishop Museum. That battle is still
23 going on.

24 The artifacts that were discovered with
25 the bones are in the office of the cultural expert on

1 her wall to be displayed as trophies of her conquest.

2 You play golf on our graves. Should we
3 play golf at Arlington or Punchbowl? So to say that
4 it's not that important 'cause that's what your graph
5 was saying -- nothing here says that, you know -- the
6 worst reading, you know, on a scale of 1 to 10 where 10
7 might be bad, 10 over here is like, oh, not that bad.

8 Everything here like practical and mitigable.

9 It was a long time ago that the U.S.
10 Government decided that Makua and Kaho'olawe were not
11 practical to clean up. You guys are giving up
12 Kaho'olawe on November 12. You guys are effectively
13 not doing much other than saying: We are now removed
14 from the process and responsibility of cleaning it up.

15 You plan on expanding into these new
16 areas. There's areas in San Diego, Texas and across
17 the U.S. that have not been cleaned up. And I don't
18 see -- see, what I keep on seeing is practical,
19 practical. The people that you decide -- who decide
20 what this practical is where are they from? They're
21 not from here.

22 The other thing, looking at your
23 controls, a simple thing you guys are talking about
24 increasing the vehicle from 27 to 400. You guys
25 talking about washing the vehicles. You're saying that

1 impact on the use of water is going to be negligible,
2 you know, hardly noticed.

3 I was part of a mobile tactical unit
4 here for communications. And I know the amount of
5 water it takes to wash one vehicle. I know the amount
6 of water it takes to wash 27 vehicles. I know the
7 amount of water it takes to wash 200 vehicles. There
8 is a big difference. There's a huge difference.

9 Not to mention you guys are going to
10 bring soldiers here to man those vehicles. They're
11 going to live in communities that you guys are going to
12 build for them. You say you guys are going to bring
13 money to the state.

14 Well, you don't pay taxes when you guys
15 buy gas on base. You don't pay taxes when you guys buy
16 cigarettes, alcohol, food on base. So how's that money
17 going to get back into our community?

18 You use our roads. You guys might have
19 paid for the federal ones. What about the county ones?
20 What about the increased traffic from the members of
21 your brigade? They're coming here.

22 I know what you guys are doing. I can't
23 disagree with this. It's like every year we play
24 Makahiki games for about four months out of the year.
25 We like to go camping. We enjoy being out in the

1 outdoors. We like to challenge each other in games of
2 strategy. Some of them are war games. We don't have
3 to hide behind weapons of mass destruction. To do that
4 we use our hands, use our strength and our minds. And
5 we enjoy doing that.

6 We invite you to come play our Makahiki
7 games. Because our Makahiki games fit in well with
8 what this community, what this place is. So I can
9 disagree with anything that's in here. I talked to
10 some of your people that have prepared this statement.

11 But you guys don't belong here. You
12 haven't earned that right. Your precedence has shown
13 you're not responsible for what you say you're going to
14 do. And that your views of what are negligible and
15 practical are not in line with ours. Thank you.

16 (Applause).

17 MS. LEE: Mr. Ebel.

18 MR. BUD EBEL: Thanks for the
19 opportunity to speak. I'm going to keep it brief. I
20 got a couple general things and a couple of specific
21 things.

22 Specific. This last year there were 599
23 fires on O'ahu. So far this year there's 898. Fire is
24 an issue. I can't stress that too much. You've heard
25 a lot of people say that. Just this record, we have

1 the dryness. But I also want to touch on another thing
2 right now and is it hasn't come forward yet but it will
3 in the very near future.

4 California is having a heck of a time.
5 They're talking about a couple of wackos that were
6 setting fires. This could very well be part of the
7 terrorism. Extra effort must be placed on fire
8 prevention and fire suppression and the word I'm trying
9 to find is putting out the fires.

10 Try prevent them. Be prepared if
11 something goes wrong, does happen. Have very adequate
12 facilities, please. That's terribly important to me
13 and I think everybody.

14 As far as whether you should have your
15 training, that's the most important thing in the world
16 as far as whether this weapon system is necessary.
17 It's necessary because it said so. It's protecting our
18 soldiers and it's making our soldiers better and that
19 must go through.

20 I really haven't got a lot else. But I
21 do want to thank you for your efforts. I've always
22 found the Army to be an excellent steward and I've had
23 experience in more than 12 states. I have no quarrel
24 with anything from New York to California. In Hawai'i
25 I think you've been excellent stewards also. I

1 appreciate your efforts. Thank you. (Applause).

2 MS. LEE: When we started our public
3 comment meeting we asked for everyone to respect all
4 the speakers that come up. We're going to hear a lot
5 of views tonight that we may not agree with. We ask
6 that you allow each speaker to say what he or she has
7 to say without any interruptions. So please join us in
8 that courtesy. Ohana.

9 MS. OHANA FOLEY: Aloha mai kakou.

10 AUDIENCE: Aloha.

11 MS. OHANA FOLEY: Yeah. My name's
12 Ohana Foley. I'm born and raised on the island of
13 Maui. Where do I start? Tell you a little bit about
14 myself. Not native Hawaiian, but I was born and raised
15 here. My boyfriend is in the Army. And although I
16 don't like his job and who his employer is really and
17 the stuff that happens as a result of the military
18 presence in Hawai'i, I do like him as a person.

19 My father fought in a war not unsimilar
20 to the war that is now going in Iraq: Vietnam. He
21 does have PTSD from that. My grandfather flew for the
22 Air Force in World War II. And on the other side my
23 grandparents died in the Holocaust.

24 So I have some experience personally
25 with my family and stuff with the military and with the

1 nature of war and violence and that sort of thing.

2 I'm absolutely against this Stryker
3 program. I guess my first question -- trying not to
4 read verbatim. My first question is do you ever talk
5 to your soldiers and ask them stuff?

6 Because I have, like, a lot of friends
7 that actually live on the base and are in the military.
8 It sounds to me even yourself in the press news media
9 you say you're, you know, you have so much to train for
10 and you need more land.

11 And you have so much already. And you
12 can't already do that job so now you're asking us for
13 another project and more land. It sounds to me like
14 all this is about it's not that it's a good idea. It's
15 like you want more land. You just want to play your
16 war games more and more.

17 It doesn't make sense to me because you
18 said you need Makua. You need to bomb, desecrate a
19 beautiful valley where children play, where people
20 spend their pastimes. It's a beautiful place if you
21 ever stopped to look at it.

22 And you say you need that for training
23 here. You need another project. You're asking us for
24 more land. It just doesn't make logical sense.

25 Someone was saying about stewardship.

1 The military presence here -- I mean, okay. Also I'm a
2 citizen of Wahiawa. You know, every day I deal going
3 in and out with the traffic there.

4 Now, I'm from Maui where we have a lot
5 of outrageous development plans and processes going on.
6 They were required to do traffic impact. That's not in
7 there, you know.

8 And I live in Wahiawa. It's already,
9 like, you have to wait forever to get into the city
10 area around 4:30, 5. You want more cars, more
11 families, more people in this area.

12 And we have -- I met this person -- man,
13 I forget his name now -- who was employed by you,
14 supposed to be the environmentalist. You guys don't
15 seem to really get like we're the extinction capital of
16 the world. We have lost, like, 70 percent of our
17 native birds. We have plants found nowhere else on
18 this planet.

19 And you're saying: "It's okay. This
20 critical habitat. We need to sacrifice it for national
21 security." You know, when is enough enough?

22 On that point, you know, it was one of
23 your Republican presidents who said that, "In the
24 process of self-defense mind you don't forget or lose
25 what's worth defending in the first place." That was

1 Eisenhower.

2 You're asking us to sacrifice our
3 environment, the health of our children, security.
4 This is going to make us more unsafe, more of a target
5 and not to mention this whole process. The people out
6 there. Are you afraid of signs? You're afraid of
7 signs. You call yourself Americans?

8 Let me remind you you swore an oath to
9 protect the constitution. You swore an oath to protect
10 the principles of democracy. These are not the
11 principles of democracy. You want an oligarchy? What
12 are you so afraid of? Freedom of speech? You work for
13 us. Or if I'm American, supposed to.

14 But oh, so you're afraid of signs. Your
15 signs are here. I don't know. Are you so afraid of
16 truth? Are you so afraid of descent?

17 What is the point of going across the
18 world, across the ocean to fight wars if you're afraid
19 of descent, if you're afraid of freedom of speech?
20 What's the point? Go fight for someone else if
21 that's -- you know, you're losing your whole moral
22 space in this whole process here.

23 You're only making matters worse for our
24 community and for your soldiers who have to interact
25 with us all the time. It's more of a resentment, you

1 know. On the base they can go and live and not
2 necessarily interact, or like someone said, shop in our
3 stores with us because you have stores there.

4 But when they come into our community
5 it's more and more they're not wanted. This whole -- I
6 don't even know why I'm testifying. I don't believe in
7 this process. It's so frustrating to see people who
8 are soldiers, BDUs and their outfits and stuff, so
9 afraid of signs, so afraid of free speech.

10 Final comment. I'd just like to say
11 ku'e na ka noho hewa o Hawai'i nei. I'm sorry for the
12 people who got arrested tonight. Those are our kupuna.
13 They're sacred to us. It's a shame. It's a shame that
14 you let this happen this way. (Applause)

15 MS. LEE: The next speakers coming up I
16 have Travis, Julia Estrella, and Oliver. Oliver, are
17 you coming up again?

18 UNIDENTIFIED SPEAKER: How about Keli'i,
19 number 24?

20 MS. LEE: I'm not there yet. On 16.
21 Okay. Let's start with Travis and then Julia.

22 TRAVIS: (Making rap sounds on
23 microphone.) Nah, nah. Just trying to wake you fuckers
24 up, right? Working on a poem. Didn't have enough time
25 to finish it. But my friend here, she's going to help

1 me finish it. Jamie.

2 Anyway, I'll just tell you what I got

3 and I'll freestyle the rest. Culture and the arts.

4 Almost seven months since the invasion, Iraqi

5 resistance has not subsided. The occupation isn't

6 going so well. 225 years since discovery, 110 years

7 since the occupation began.

8 Now we sell our culture to old haole

9 retirees from Alabama who wear cheap polyester Hawaiian

10 print aloha shirts depicting beautiful tropical sunsets

11 in hues of yellow, orange and red.

12 The shirt was purchased in the

13 International Marketplace with the yellow, orange and

14 red shorts to match. You know the ones. The ones that

15 barely fit.

16 Right next to the shirt shop is the Maui

17 Divers pearl stand, a place where for a nominal fee you

18 can crack open an oyster and pluck its pearl for a

19 possible earring. If you can only rip open enough

20 oysters to find a perfect pearl to match.

21 UNIDENTIFIED SPEAKER: I do not agree

22 with your --

23 TRAVIS: You don't have to. That's

24 okay.

25 UNIDENTIFIED SPEAKER: You should not be

1 testifying. You should not be testifying. You're not
2 doing any justice.

3 MS. AMARAL: Kupuna, sit down, please
4 for a moment. Thank you. We appreciate your comments.
5 Please, everyone will be given some time to stand here
6 and to speak. What we ask you for is your patience,
7 your respect whether we agree or disagree with what is
8 being said.

9 Everyone has five minutes to speak and
10 to be heard and to be on the record. We ask you to
11 please try and maintain some self-control. The
12 registration is still open if you would like to sign up
13 to speak. Kala mai. Thank you, Kupuna. Please.

14 UNIDENTIFIED SPEAKER: Continue, Travis.

15 UNIDENTIFIED SPEAKER: Hana hou.

16 TRAVIS: Now I got to start all over
17 from the beginning, my flow. My five minutes starts
18 again. Here it goes, right?

19 MS. AMARAL: No, Travis. Your five
20 minutes does not start.

21 TRAVIS: All right, all right.

22 Anyway -- oyster, pluck its precious pearls for a
23 possible earring. If they can only rip open enough
24 oysters to find a perfect pearl to match.

25 Across the street you can get free

1 brochures that market an authentic Hawaiian style luau
2 out at the North Shore at the Polynesian Cultural
3 Center where real Polynesians, most likely of Mormon
4 faith, will entertain with song and dance consisting of
5 ancient hula and old religious chants concerning the
6 righteousness of the beauty of the land and its people.
7 The...land...and...its...people.

8 That's why we're here today. Because
9 you guys are making it hard for our brothers and
10 sisters to sing and dance concerning the beauty of the
11 land and its people.

12 You're ripping up the land. You're
13 messing with the people. Why? People were arrested
14 earlier this evening for trying to come in here with a
15 sign. We didn't try to bring up a tank. We didn't try
16 bring in no platoon. We're not trying to have live
17 fire practice.

18 We're just trying to hold signs to
19 testify. We're just trying to speak truth for one
20 second of one minute of one hour of one day. You know
21 what? It might not make a difference. Because who
22 knows? You might just build, I don't know, a big old
23 target on my house and use that as practice one day.
24 Lord knows I haven't been able to stop you from taking
25 Makua.

1 I haven't been able to stop you guys
2 from doing anything you want to do around here, have I?
3 Have any of us been able to? All we do is die. That's
4 all we do. That's all you do is kill us, other people,
5 mainly brown people, some of them might be Asian. It
6 just keeps going on and on. It's such a farce. It's
7 such a farce.

8 You talk about freedom. You talk about
9 liberation. Well, if occupation equals liberation, tell
10 me how the Hawaiians are living up to here? All right?
11 Dying on waiting lists waiting to get on lands that are
12 so impoverished because you guys sucked up all of the
13 resources to feed industry.

14 Which industry am I'm talking about?
15 I'm talking about pineapples, talking about sugarcane,
16 things we didn't grow before you guys came along.

17 Makaha is beautiful, was a hell of a lot
18 more beautiful before you guys showed up. Now, I hear
19 people talking about if you're going to return the
20 land, if you're going to return Kaho'olawe, if you're
21 going to do all those things, clean it up.

22 Well, you know what? I didn't want
23 that. Just leave. And we'll clean it up. Because if
24 we leave it up to you guys, you never going to do it
25 because you never have, never have. Clean up Diamond

1 Head, you know? The tourists, it's all, it's like
2 dirty, it's dusty. I live on the slopes of Diamond
3 Head. I see the forts you guys built up because you
4 were afraid the Japanese were going to come and, you
5 know, do a number. Speaking -- whatever. You know
6 what I mean?

7 All I'm saying we got the sign on.
8 We're got it in. You're so afraid of this. You're so
9 afraid of what we have to say with this piece of paper.
10 With a little bit of ink and a little bit of creativity
11 we could have, like, drawn stuff on it. Lord knows.

12 But we figured words mean something.
13 That's why I'm in front of this mike. That's why people
14 are outside just to get this moment to say something to
15 you, screaming in their deaf ears because you don't see
16 the desperation in our tears. You don't see. You
17 never have. You probably never will. If you do, I'll
18 take it all back. You know what I mean? But I don't
19 think I'm going to have to. (Applause).

20 MS. AMARAL: Thank you. Our next
21 speaker is Julia Estrella followed by Kealii followed
22 by Dr. Marion Kelly.

23 MS. JULIA ESTRELLA: Good evening. Can
24 you hear me?

25 MS. AMARAL: Yes.

1 MS. JULIA ESTRELLA: My name is Julia
2 Matsui Estrella. I speak as a representative of the
3 Pacific Island and Asian-American Ministries. And also
4 The Center for Theology Strategies, better known as
5 PACTS. We are an interfaith and ecumenical group
6 formerly based in the Bay Area but presently based in
7 Hawai'i.

8 I was born until 1940 in a very
9 militarized town, better known as Wahiawa. And the
10 soldiers from Schofield Barracks used to practice
11 marching up and down Kuaiwi Street, my street. I was
12 born and raised at 175 Kuaiwi Street in Wahiawa.

13 Military families used to rent houses
14 all around our little home and on Kuaiwi Street. As a
15 child I used to wonder why the military fathers and
16 parents had a tendency to treat their children -- to
17 beat their children with hoses until they came
18 screaming to our home for protection. And this was not
19 just one family. It was families all around us.

20 As children we couldn't understand that
21 because my parents would never touch us, would not
22 spank us. In fact we would lie on the bed and say,
23 "Please spank us because we don't know what it feels
24 like to spanked."

25 Everybody else in the neighborhood

1 because it was heavily -- the houses were rented to the
2 military families. So as a child I began to wonder why
3 so much violence within the families that surrounded
4 our home.

5 There was always plenty of dust with the
6 troops deployed in our neighborhood. And a lot of
7 waiting because of the convoys of military trucks going
8 up and down Kamehameha and California Streets.

9 I breathed and tasted the military all
10 around me as I grew up. Do you wonder why I feel very
11 claustrophobic? I feel very claustrophobic. Because
12 somehow growing up in Wahiawa in this highly
13 militarized area feeling surrounded by soldiers, by
14 military tanks, convoys, domestic violence, I grew up
15 with this sense of claustrophobia that I still carry
16 around with me.

17 Having experienced the U.S. military
18 directly in my everyday life for the first 21 years of
19 my life, I can tell you that the noise, the dust, the
20 domestic violence, the way women were treated, the
21 drunken brawls at the Top Hat that accompanied the
22 military presence, it was all a very negative impact
23 not only on the endangered plants and species of
24 Wahiawa but on the psyches of the children, including
25 myself.

1 And especially the children. And I
2 include the military children as well as the civilian
3 children. The military impact was an extremely
4 difficult one on all of us.

5 Somehow it seems the military training
6 and military values poison every aspect of our
7 environment, and not just the physical environment but
8 especially the spiritual one.

9 After escaping from Wahiawa and the
10 military for a while, I went to the continent for 30
11 years to further my education and to work.

12 I served as the director of this
13 organization for many, many years, the Pacific Islands
14 and Asian-American Center for Theology and Strategies
15 in the Bay Area for 30 years. I lived in the Bay Area
16 for 30 years.

17 I decided to come back to Hawai'i
18 because I missed the beauty of the land and of the
19 people, especially amazingly, the tradewinds which we
20 have been missing for the last couple of days. I
21 really miss the tradewinds.

22 Now I am very angry that there are plans
23 to bring the Stryker Brigade to my hometown. And I
24 know they're going to Kahuku, the Big Island and all
25 over. I'm concentrating on Wahiawa, Schofield

1 Barracks, because I went to school with a lot of
2 military children. And I feel like the military has
3 been a part of my life in Wahiawa.

4 All I can say is there are already
5 3,000, according to your study -- that already 3,438
6 soldiers stationed at Schofield Barracks and another
7 810 new soldiers and their families will be coming to
8 Schofield Barracks under the Stryker plan.

9 More street violence, more domestic
10 violence, more dust, more armored vehicles, more
11 accidents. And, unfortunately, I would -- because of
12 all of this I want to say we need to stop. We need to
13 stop this madness, stop this worship of war machines.
14 Stop the violence that will come with more soldiers in
15 our communities. This land of ours is very sacred.

16 We don't want heavy armored vehicles to
17 come and trample all over us and all over our sacred
18 land. I feel that for the first 21 years of my life I
19 was trampled on growing up in Wahiawa.

20 I have a vision for peace in our land,
21 in our 'aina and I will not let go of this vision. The
22 voices are growing stronger and will continue to grow
23 stronger in opposition to the Stryker plan, to the
24 discretion of our 'aina, to the military presence in
25 Hawai'i.

1 I will never forgot my 11th grade
2 teacher, Mrs. Hoshibata. Some of you may have had her
3 as a teacher as well at Leilehua High School, who
4 introduced to our class the story of the "Devil and
5 Daniel Webster." The moral of the story was do not
6 compromise with evil.

7 As residents of Hawai'i we cannot
8 compromise with evil, with the killing mentality and
9 the killing machines. Let us all join our hands
10 together to stop the Stryker Brigade from ever landing
11 on our shores. Thank you. (Applause)

12 MS. AMARAL: The next speaker is Keli'i
13 followed by Dr. Marion Kelly followed by Hanaloa.

14 KELI'I: I'm speaking to you tonight as
15 a kanaka ma'oli perspective. One of the first things I
16 want to do, I want to show you what war actually looks
17 like. (Showing photo) This is what war looks like.
18 Probably innocent guy trying to fire.

19 In 1893 Hawai'i was stolen by the sugar
20 oligarchy with the help of America's military. At a
21 time more so than the profits of the sugar industry
22 America's insatiable thirst and hunger for strategic
23 military domination of the world resounded loudly.

24 110 years later that sound still
25 reverberates throughout Hawai'i while its indigenous

1 population and fellow citizens still remain captive by
2 America's imperial forces.

3 After last night's and tonight's arrest
4 of Dr. Kekuni Blaisdell, Terry Keko'olani Raymond and
5 Pete Doktor, it is a complete blatant suppression of
6 our voices. An unbalanced approach to the process of
7 dialogue, severe violations of civil indigenous rights
8 and all reinforced with multiple stages of police
9 dominance revealed to me how bias corrupt, insidious
10 the Army is.

11 Your chattering and shivering in this
12 tropical heat, you construct inherent conflict to the
13 issue of public participation by holding a public
14 meeting at a privately owned establishment while hiding
15 behind your paid-in-full cronies.

16 And from viewing the list of future
17 meetings with the public you're continuing on the
18 premise of not allowing all perspectives to be shared
19 on this important issue that not only concerns the
20 present but more so how it is going to affect future
21 generations.

22 Quoting the draft declaration of the
23 rights of indigenous peoples, "Indigenous individuals
24 and peoples are free and equal to all individuals and
25 peoples in dignity and in rights and have the right to

1 be free from any kind of adverse discrimination,"
2 including signs, "in particular that based on their
3 indigenous origin or identity. Article 2.

4 Furthermore, to quote, "Indigenous
5 people shall not be forcibly removed from their lands
6 or their territories, Article 9." This is my land.
7 This is our land. You are the trespassers and you
8 should be arrested and taken to the Kalihi police
9 station and made to post bail.

10 Moreover, being that you, America and
11 your military are repeat offenders, I deny your
12 opportunity to post bail. Instead, you are now hereby
13 deported.

14 I spent my life sandwiched between Pearl
15 Harbor and Camp Smith. For 33 years I have never seen
16 the peak of Halawa Heights. For 33 years I've never
17 swam in the bay at Pu'uloa. Stuck in the middle of a
18 polarized military environment I try to raise my
19 daughter. She too may never experience her ahupua`a in
20 its true identity.

21 Yet, you, the Army's branch of America's
22 imperial forces, continue to want more land for
23 training. In general you call it the Army
24 Transformation. In particular with reference to O'ahu
25 you call it the South Range Acquisition Area. SRAA,

1 which I stand in opposition to in becoming another part
2 of the Schofield Barracks Military Reservation, SBMR.

3 Quoting the Army's Environmental Impact
4 Statement, "Under the proposed action that acquisition
5 area would consist of approximately 1400 acres. The
6 SRAA is currently used for pineapple agriculture."

7 But more vital to this land theft is the
8 reality that quote "the proposed action configuration
9 also encompasses forest land, part of the Honouliuli
10 Preserve."

11 Would it be okay with the American
12 populace, for example, if the Army in the name of
13 fighting terror, proposed taking an estimated 100 acres
14 of the John Muir Redwood Forest? Or perhaps setting
15 aside an approximate 40 hectares of Yellowstone
16 National Park for live fire exercises that will operate
17 for, quote, "an estimated 180 to 242 days per year at 8
18 to 12 hours per day, functioning as a company which
19 consists of 10 trucks and 23 Strykers while
20 simultaneously running convoys of 24 vehicles to
21 transport troops to the aforementioned forest reserve
22 area every 15 to 30 minutes, which equals out to 96
23 vehicles per hour"?

24 I highly doubt the United States
25 civilian community would support such a land grab of

1 their national preservation jewels.

2 Honouliuli is our jewel. The entire
3 archipelago is our jewel. Yet on Oahu every training
4 day at SBMR, according to the operation hours provided
5 by the EIS, anywhere from 768 to 1,152 Army vehicles
6 which include 20-ton Strykers outfitted with 180 mm
7 cannons will traverse preservation areas, increase live
8 fire ammunitions by 25 percent, dismantle sensitive
9 ecosystems that provide homes to native and endemic
10 plants and animals, destroy for generations land and
11 fresh drinking water in an area that is designated by
12 the state of Hawai'i as a Conservation District
13 Resource Subzone.

14 As stated in the Army's EIS, the
15 proposed configuration includes land within the
16 Conservation District Resource Subzone. According to
17 your table 5-5 entitled, "Conservation District
18 Resource Subzone that may pose," you state the subzone
19 objectives are, quote, "To protect valuable resources
20 in designated areas such as restrictive watersheds,
21 marine plant and wildlife sanctuaries, significant
22 historic archaeological, geological, vulcanological
23 features and sites and other designated unique areas."

24 It continues on to say "limit uses where
25 natural conditions suggest constraints on human

1 activities." Finally, "Develop with proper management
2 areas to ensure sustained use of the area's natural
3 resources."

4 Now, how does live fire training in
5 conjunction with an estimated 138,240 to 278,784 heavy
6 polluting vehicles per training year, Strykers, uphold
7 the previously stated objectives that pertain to the
8 Conservation District Resource Subzones?

9 Let me answer that question for you.
10 They do not uphold. "Training and operation of the
11 proposed QTR2 Multi-purpose Qualifying Training Range
12 on SRA could affect land use with a portion of the
13 Honouliuli Preserve. "

14 I would suggest change the word "could"
15 to "will".

16 "Furthermore," quote, "during training
17 and operation of QTR2 natural resources management and
18 recreational activities would be restricted within
19 certain portions of the SRAA. This would result in a
20 significant impact on natural resources management and
21 recreation within SRAA," end quote.

22 Again, change "would" to "will".

23 What is inferred in this section of the
24 EIS is the compound destruction of the few places left
25 on Oahu that is vacant from adverse human interaction.

1 Due to your proposed training schedule,
2 massive moving steel and bombs compiled with less
3 environmental restoration and preservation work, leads
4 to the creation of a quote, unquote "biological
5 ghetto."

6 Let me remind you of a specific
7 conservation subzone objective. "To limit uses where
8 natural conditions suggest constraints on human
9 activities."

10 In conclusion, who or what are you
11 really protecting? Your foreign assets? Your
12 international market? Your indigenous labor force?
13 Since the inception of your nation constructed on the
14 blood and soil of indigenous peoples, the slave
15 industry of importing Africans, and the deceitful
16 brokering of Asian labor in order to build your
17 railroad system, the United States of America has done
18 nothing but expand the base of its illegal occupying
19 regime to serve the purpose of exploiting other
20 indigenous people's natural resources and labor.

21 You do it here. Waikane Valley
22 condemned. Makua torched. Pearl Harbor and Lualualei
23 polluted for generations. Low federal wages and toxic
24 conditions. Contracting big money projects to your
25 friends on the continent like Napa, California-based

1 active lend lease, so on.

2 It is we the people of Hawai'i that have
3 suffered the most. It is we who are the first target
4 for preemptive strikes from nation states and not the
5 continent.

6 How do you justify the environmental and
7 cultural destruction of one place and its indigenous
8 population and fellow citizens in order to do the same
9 to another?

10 When America's imperial forces have no
11 further need for live fire training in our region, what
12 will become of our land? Our ocean. Our water? Our
13 air? Will it join the list of most devastated place in
14 the world with Iraq, Afghanistan, Rombula in the
15 Philippines? Will America tell us that it is too
16 expensive to clean up, therefore we have to condemn it?

17 I want answers that address the future
18 so that I can tell my children, grandchildren and great
19 grandchildren that their cancer and asthma was not
20 caused by the actions and ignorant behavior of
21 America's imperial forces.

22 But, regrettably, I don't think that
23 will be the situation. Instead, we as a family may be
24 in court arguing our case against you in between
25 chemotherapy, their frequent visits to the

1 pediatrician.

2 I'd like to close with Frantz Fanon, an
3 Algerian nationalist and prophet on the discourse of
4 decolonization. "When the native is tortured, when his
5 wife is killed or raped, he complains to no one. The
6 oppressive government can set up commissions of inquiry
7 and of information daily if it wants to. In the eyes
8 of the native these commissions do not exist. The fact
9 is that soon we shall have had seven years of crimes in
10 Algeria and there has not been a single Frenchman
11 indicted before a French court of justice for the
12 murder of an Algerian.

13 "Indochina, Madagascar, in Hawai'i or in
14 the colonies, the native has always known that he need
15 not expect nothing from the other side. The settlers'
16 work is to make even our dreams of liberty impossible.
17 However the native's work is to imagine all possible
18 methods for destroying the settler. For the native
19 life can only spring up again on the rotting corpse of
20 the settler." (Applause)

21 MS. AMARAL: What would be helpful for
22 those of you that have prepared written statements, if
23 you could provide us with a copy of it and then we
24 could give it to the transcriber. If you're reading it
25 very hurriedly it's very difficult to write it. So it

1 would be of help. Thank you.

2 The next speaker is Dr. Marion Kelly
3 followed by Hanaloa followed by William Aila. We ask
4 for your indulgence. What you may find happening here
5 is at nine o'clock the tape is going to stop. I may
6 have to stop you mid-testimony, Dr. Kelly, just so that
7 we can change the tape. That's all we're doing. I'll
8 keep on eye on the time. Thank you.

9 DR. MARION KELLY: Aloha.

10 AUDIENCE: Aloha.

11 DR. MARION KELLY: Three of our Hawaiian
12 people were arrested tonight. We were told it was
13 because they each had their message written out on a
14 piece of cardboard.

15 This is strictly not a public meeting if
16 that is the case. This is one of the required meetings
17 to allow the military to tell what their plans are so
18 they can go forward. And this is cut off by the people
19 who want to give you their message. I'd like to know
20 who in Washington, DC told you to do this. Was it the
21 vice president? Or the president?

22 The military has selected private
23 institutions, privately owned buildings so they can
24 hire a company to keep people out who have a piece of
25 cardboard with a few words written on it such as?

1 (Indicating). "Strykers not wanted in Hawai'i". You
2 ever heard that? It is intimidation. Is Bill Paty
3 still here watching the people being kept out -- hi
4 there, Bill -- because they had signs? Were you
5 counting us?

6 Independent Hawai'i has been occupied by
7 the American military for over a hundred years. If I
8 may I would like to speak briefly on a small portion of
9 Hawai'i's history to present my position that the
10 United States military must not send their Strykers to
11 Hawai'i.

12 I'm going to take you back -- maybe you
13 don't know this. Maybe you've just come here recently
14 in the last 5 years or so or 6 years or 7 years and you
15 really don't understand what this history really was.

16 Okay. Let's go back a little more than
17 that a hundred years 1893. 1893 American troops landed
18 in the islands to support the greedy American sugar
19 plantation owners. You know that, Bill? Sugar
20 plantation owners who already had privatized the land
21 and had taken over much of it for a few cents an acre,
22 they were well on their way to becoming wealthy and
23 taking over political control of the islands and of the
24 Hawaiians. They already had them in control.

25 They were anxious to get more money for

1 their sugar that they sold to the United States. So in
2 order to get that money for their sugar they took over
3 the peaceful nation of Hawai'i and put the queen, the
4 Hawaiian queen in jail. That's the truth. I'm not
5 telling you lies. I'm telling you the truth. I know
6 this history. I taught this history at the University
7 of Hawai'i for many years. It's the real history.

8 In response, the women of the
9 independent nation of Hawai'i gathered their people
10 together on each of the islands and they held meetings.
11 The Hawaiian women went from island to island. They
12 organized what has become known as the monster
13 petition. Did you ever hear of that, the monster
14 petition?

15 They organized that and it was against
16 the American takeover. They gathered some 38,000
17 signatures and presented the petitions to the United
18 States Senate in 1897. The Senate could not act. The
19 Senate was stalled. They could not get enough votes to
20 get the control of Hawai'i. That's the truth.

21 So what happened? In 1898 as Spain gave
22 independence to its colonies: The Philippines, Puerto
23 Rico, Cuba, the United States moved in and took over
24 the former Spanish colonies. In order to take the
25 Philippines, they needed Hawai'i and Samoa for

1 refueling stopovers. You know, the boats were not
2 that fancy in those days. They needed to refuel. This
3 is the true history.

4 The United States struck a deal with
5 Sanford B. Dole. Ever heard of Sanford B. Dole? He
6 was the head of the Americans who took over the
7 Hawaiian Islands illegally. He was also in with the
8 American sugar plantation owners who controlled
9 Hawai'i's economy.

10 The United States took over all the
11 Hawaiian Islands. The people were not consulted. They
12 had no say in the matter. The 38,000 Hawaiian
13 signatures on the petitions were completely ignored.
14 The American military moved in to secure their
15 controlling position and they have been here ever
16 since, over 100 years.

17 Now, with the threat of the United
18 States importing their Strykers Brigade of 300, about
19 300? 400? Closer to 500 -- vehicles into our Hawaiian
20 Islands, many of us feel that the United States is
21 using this means to intimidate, to continue to
22 intimidate the Hawaiian people. These are small
23 islands. These are small islands. And they're going
24 to bring these monster things here? Outrageous?

25 They have more land up there. Why don't

1 they run them back and forth up there? Why bring them
2 down here to these little islands?

3 Our islands are small. We only have
4 6,424 square miles and a very natural resources. The
5 continental United States has more than
6 3,600,000 square miles within its borders and all the
7 natural resources that it has.

8 Why do they bring them here?
9 Intimidation. Intimidation. How can you ever think of
10 bringing those monsters here? We do not want, nor do
11 we need any more of U.S. military flexing their muscles
12 in our peaceful land, our sacred land.

13 Only three states are smaller than
14 Hawai'i. Rhode Island, Delaware and Connecticut. And
15 these states were among the first 13 states to
16 challenge Great Britain.

17 Hawai'i was an independent nation. We
18 shall be independent again. The American military can
19 leave any time and don't bring your Strykers here. We
20 don't need them. We don't want them. Take them
21 someplace else. (Applause).

22 MS. AMARAL: Mahalo, Dr. Kelly. What
23 we'd like to do now is take a break for approximately
24 10 minutes. That gives us a chance to change the tape
25 and allow people to use the facilities which are right

1 outside. Let's take a break. (8:50 p.m.)

2 (Transcript continues on next page.)

1 MS. AMARAL: Just a little bit of a reminder for
2 some of you who came in a little late. The ground rules
3 are that we ask each speaker to please limit themselves
4 to five minutes. Part of what we do as facilitators is
5 remind you when you've got one minute left. We try to be
6 courteous about it, that when we give you the one-minute
7 sign, that usually means can you kind of wind it up and
8 summarize it.

9 Another thing: We didn't bring it up earlier,
10 and that's probably my fault, but I didn't think that I
11 had to talk about it. When you speak this evening, would
12 you please not swear. People in the room find it
13 offensive. It's not necessary. Pick another word. But
14 it's not necessary to be vulgar and to swear. So we ask
15 for your self-control there.

16 And, finally, you know, as we're talking here in
17 the front of the room and some people are at least seated
18 here, trying to listen, the court reporter is trying to
19 make notes and take down everything you're saying, the
20 conversations in the back of the room tend to make it
21 difficult to hear in the front of the room. So what we
22 ask those of you that are having conversations in the
23 back of the room to do is just take it outside. Take it
24 outside, then you can go on and on, talking, and it won't
25 bother us here in the middle of the room when we're

1 trying to hear what people have to say.

2 Finally, please, those of you with cell phones,
3 please turn it off or put it on "vibrate" or silence it
4 because it's difficult for the court reporter, who keeps
5 getting interrupted, and it is heard, then, over all of
6 the tapes.

7 Okay. The last three speakers. The first is
8 Hanaloha; the second is William Aila; and third is
9 Suzanne Marinelli.

10 Hanaloha?

11 HANALOA: Aloha ka ko. So many feelings go
12 through me. I wasn't planning on coming out here today.
13 I just happened to be calling a friend for a totally
14 unrelated reason, and he let me know that there's a
15 possibility that a kupuna, a very precious kupuna of
16 ours, was going to be arrested, shackled, and accosted
17 and taken away in the back of a police car like a common
18 criminal; and I just was, "What?" I said, "Why?" I
19 heard about the hearings going on. I said, "It's public
20 hearings, yeah?" Public hearings.

21 And he told me, "No. I'm not sure what's going
22 to go on. But if you can come up, come up."

23 I just came from town. I work on the Windward
24 side. I mean, I've been all over the place today. All I
25 wanted to do was go home and eat, just get something to

1 drink, take a bath, and go to sleep. But something about
2 us kanaka maoli, you know, it's about family, ohana. And
3 I couldn't believe. A kupuna; an old man. I don't know
4 if you guys realize what we're talking about. I don't
5 know if you guys witnessed that.

6 You know, and I gotta say before I say anything
7 else, I gotta say thank you to those of you who spoke
8 before me that I heard. I'm so glad, because you helped
9 calm me down. I was so angry. Because right when I got
10 here -- I'm so glad I didn't get stopped for speeding. I
11 don't usually speed, but I just felt this urgency. And
12 right when I pulled into the parking lot, I see this line
13 of police cars heading out. And the first, I looked
14 inside, and there's kupuna, this old man, an old Hawaiian
15 man in the back of a police car. I know this man. He's
16 a very gentle man. He's very -- he would never hurt a
17 flea. He's the most law abiding, upstanding kupuna that
18 I've had the honor to know. He's just a very special
19 person. And I saw him being hauled off like a criminal.

20 So my first question is: Who's in charge here?
21 Is it you, Colonel?

22 COLONEL ANDERSON: Yes.

23 HANALOA: You're in charge?

24 COLONEL ANDERSON: Yes.

25 HANALOA: Okay. Did you order the arrest of

1 that individual, Kekuni Blaisdell?

2 COLONEL ANDERSON: No.

3 HANALOA: But I thought you were in charge.

4 Did you realize he was being arrested when he
5 was being arrested?

6 COLONEL ANDERSON: No.

7 HANALOA: Okay. Then I call upon you, as being
8 the Commander in charge, to intervene. And I think you
9 need to make a phone call. I don't know what police
10 station he went to. You need to intervene. My dad was
11 an O6 in the Army. He was with the Inspector General,
12 one of his last tours. He came over; he was a USACH
13 Commander.

14 I was in the Air Force. Very patriotic citizen
15 all my life. I'm still a patriot. But I've been
16 stripped bare of the fiction of America; and I tell you,
17 it hasn't come easy. It's been a very painful process.
18 I loved my country because it was all I knew. I was
19 proud to be Hawaiian, but Hawaiian was always part of
20 being American. I didn't know there was a difference. I
21 didn't know that the big, bad boogie man on this planet
22 was America. And I'm ashamed to say that I was part of
23 that war machine. It was a small part, but it was
24 enough. And it took the first Gulf War from Bush Sr. to
25 help wake me up. Totally changed my life. That's why I

1 stand before you now. Not because I'm some radical
2 protester, although I've done some radical protesting,
3 you know; not because I'm just some angry, you know,
4 young man who just wants to complain about something. I
5 don't want to be here right now. But my aina hanau
6 brought me here.

7 And I want to know, if you guys stand for
8 freedom, how can you allow something like this to happen?
9 Here's upstanding, credible citizens of the Hawaiian
10 community, the community you're supposed to persuade that
11 you're acting in the interest of humanity -- right? I
12 mean, American interests don't supersede those of
13 humanity, do they? Could I get a response on that? Do
14 they? Do they? Do national interests of America
15 supersede those of humanity in general? Are they above
16 and beyond international law?

17 I need to know that from you, the Commanding
18 Officer, the person in charge in this place. We need to
19 know that.

20 MS. AMARAL: Let me clarify something, Hanaloa.
21 The purpose of this is to take public comment, not to
22 engage in conversation. So your comments are going on
23 the record.

24 HANALOA: E pii ana o luna, E iho ana o lalo, E
25 hui ana hamoku, E ku ana ka paia; E pii ana o luna, E iho

1 ana o lalo, E hui ana hamoku, E ku ana ka paia; E pii ana
2 o luna, E iho ana o lalo, E hui ana hamoku, E ku ana ka
3 paia.

4 We're not dead yet.

5 (Applause)

6 MS. AMARAL: Our next speaker is William Aila,
7 followed by Suzanne Marinelli.

8 MR. WILLIAM AILA: Aloha ka ko. I come from the
9 other side of the mountain there, a district called
10 Waianae Ahupua'a of Lualualei. I come with me and I
11 bring with me my kupuna, who you can't see behind me but
12 are still there. I also bring with me the generations
13 that have yet to be born and my responsibility to leave
14 them a better place. Therefore, I have to come and say
15 that I oppose the Stryker Brigade proposal coming to
16 Hawaii.

17 I would also say that 45 days is too short a
18 time to read all those f'ing documents. I didn't swear.

19 MS. AMARAL: Thank you.

20 MR. WILLIAM AILA: But you got the meaning. 45
21 days is too short to read all those documents. So I
22 would recommend that the Army extend that to 90 days so
23 that we can have some real understanding of all the
24 tables and all the things that you folks on this side
25 from Tetra Tech put together, because sometimes -- when I

1 grew up, I was told that if you can't dazzle them with
2 your brilliance, you have to baffle them with your -- and
3 you fill in the rest.

4 This Draft EIS is too long, and it's too
5 complicated, and it's too spread out all over the place.
6 I tried to do it. You gotta read this page and then you
7 gotta get this acronym and then you gotta go back to this
8 page and then that volume. It's insane. I mean, there
9 must be an easier way to put this information in it, in a
10 form that we can understand. Because you're expecting us
11 to testify on something, first it has to be in a form
12 that we can understand. It was almost foreign to me.

13 The Draft EIS does not represent my testimony at
14 the various scoping sessions that were held a year and a
15 half, almost two years ago. It didn't include the very
16 first thing I asked -- and Ralna said this over and over
17 and over again -- what about taking the 2nd Brigade and
18 moving them to Fort Lewis. And I'm not talking about
19 taking them part-time to train them over there and then
20 bring them back. What about just taking them the hell
21 over there with the 1st Brigade, because it's a lot
22 cheaper, and we can spend all that money building ranges
23 over there to accompany everybody, and that would be in
24 the interest of efficiency and cost, much more efficient
25 for the other brigades that want to come up.

1 Is that too common sense? Is that too easy to
2 understand?

3 The reason I know -- I know the reason. The
4 reason is two words: Dan Inouye. Stryker Brigade in
5 Hawaii. You guys all can sit there and look at me, but
6 you all know it in your gut: The reason that you guys
7 are here, the reason that we're talking about this, is
8 because Dan Inouye, Senator Dan Inouye. It's an
9 opportunity to continue this military trough of money
10 that comes through Hawaii. Because I know, and I read it
11 in here, that the Air Force can't move all of your guys,
12 Strykers, proposed Strykers, in 96 hours; it just can't
13 be done. You said it in there. So if you can't move one
14 Stryker Brigade, what makes them think that they can move
15 six in 96 hours? So it's an unrealistic plan. Even just
16 if you look at the Hawaii component. It's unrealistic.
17 Not to mention that the RPG is probably going to take out
18 the Stryker, anyway. I mean, you military guys must
19 surely know that. An RPG is taking out tanks in Iraq
20 right now. Land mines are taking out tanks. You're
21 putting your people in a death trap. You bear the
22 responsibility for their children that are not going to
23 be born. So you take that home with you and you twist
24 that in your na'au tonight, because you're following
25 orders and you're knowingly sending off American men,

1 some of them Hawaiians, to die, because this was not a
2 well thought-out idea and because General Motors needed
3 to make a bunch of money.

4 The EIS does not -- did not include an
5 investigation of -- and I asked this many times --
6 constructing a CCAAC range within one of the multipurpose
7 use ranges for the replacement of Makua. I asked this.
8 I also asked this purposely several times to make sure
9 that the two EISs cross-matched, that one said if we
10 move to a multi-use range at Schofield, maybe we can get
11 rid of Makua, and vice versa when we deal with the Makua
12 EIS. Not that I want more people in Schofield to die
13 because of the additional napalm that's going to be put
14 in the ground and in the dirt.

15 And, Auntie, your grandchildren going be
16 breathing it, drinking it, smelling it. Puho, puho.

17 It also didn't include to quantify the economic
18 loss. Because I hear Senator Inouye talking about
19 economic loss. I hear -- or economic gain. And I
20 hear -- and surely there's somebody in this crowd tonight
21 from the Chamber of Commerce, okay. What a wonderful
22 economic benefit this is going to bring. But what
23 happens when these guys get deployed? And certainly they
24 will be, because they're the front-running battalions of
25 this new world order of how we fight wars -- how you

1 fight wars. I have to be careful. They're going to be
2 gone. They're going to be gone a long time. So what
3 happens to all of you merchants in Wahiawa? In Mililani?
4 So they give you a bunch of money up front, but you may
5 lose your businesses in the long run. Think about it.
6 That's not the best way to design your life, around a
7 military plan.

8 The Draft EIS does not do a good job of
9 discussing pollution and social justice issues. I live
10 right across Kokole Pass, downwind. Every time you
11 train, I see the smoke. I breathe the smoke; my
12 grandkids breathe the smoke. Every time Dole and Del
13 Monte burns their fields, we breathe the smoke. The past
14 week, we had five days of southwest winds. Everybody in
15 Waianae breathed the smoke of the Kahe Powerplant. The
16 Campbell Industrial Park, industrial giants that are
17 there, the two refineries, the coal fire. I don't see
18 anything in this plan that talks about cumulative
19 impacts, including those things in a cumulative fashion,
20 on what it's causing my grandkids. I don't see it. I
21 don't see anything. I see these guys saying, Oh, this is
22 our part. You know what? But when you talk about
23 cumulative impacts, when we talk about cumulative
24 impacts, the community is talking about everything:
25 Campbell Industrial park, Kahe Park, what you put into

1 the air at Schofield, what Del Monte and Dole puts into
2 the air. You know why? Because we breathe it every day.
3 I have to watch my grandkids breathe it every day. And
4 you know what, you guys in uniform? You don't have to do
5 that. You guys that are visiting from Tetra Tech, you
6 guys don't have to do that. You guys can go home. You
7 guys move out in two years. But us guys on that side of
8 the mountain, we breathe it every day. Is it any wonder
9 that we have the highest asthma rates?

10 I don't see this EIS talking about cumulative
11 impacts. I see you talking about, Well, if we had these
12 Strykers over here, we would have 25 percent more
13 unexploded ordnance used on the range, which translates
14 into X amount of cubic feet of stuff in the air. Explain
15 that to my grandkid when he has a hard time breathing at
16 night. Explain that to him when -- because these guys
17 gotta be ready, they gotta choke, and we gotta give them
18 antihistamines. If that's the cost of freedom, no thank
19 you. Absolutely, no thank you. I do a much better job
20 defending my grandkids than that.

21 Cultural impacts, the Draft EIS fails to
22 understand and recognize that it's not just a pile of
23 rocks. And I look to Laurie over there because she knows
24 it's not just a pile of rocks. But in your analysis --
25 and I'll read it to you, first sentence -- Some impacts

1 on cultural resources, significant but mitigable.
2 Mitigable according whose standards? Your standards or
3 my standards? Because my standards are going to be much
4 higher, because I have a kuleana. The folks that came
5 before me had a kuleana. The folks that will follow me
6 have a kuleana to make sure that those sites are
7 protected. And it's not just a pile of rocks. There are
8 districts in Hawaii, there are plots of land, pieces of
9 ahupua'a, that are sacred. Springs are sacred. There's
10 no pile of rocks on a spring; but it's sacred. I don't
11 see anything in the EIS talking about the cultural
12 significance of springs or how to mitigate the damage to
13 those springs. The cultural impact portion of this EIS
14 fails to address those things.

15 It also fails to address how we fix things when
16 you burn them, as you certainly will. Because I have to
17 tell you, I quite frankly don't believe you when you say
18 you're going to have a controlled burn.

19 And I know Auntie's getting antsy over here.
20 But you know what? I'll be happy to stop, and I'll stand
21 in line again, because you said you'd be here to whatever
22 time it takes.

23 MS. AMARAL: You finish, Bill.

24 MR. WILLIAM AILA: She said I could; she said I
25 could.

1 MS. AMARAL: It's not my intention to
2 intimidate, Dr. Kelly.

3 DR. MARION KELLY: Go sit down.

4 MS. AMARAL: I am the facilitator. I will stay
5 here. Mahalo.

6 MR. WILLIAM AILA: Mahalo, Auntie. But she
7 doesn't intimidate. She doesn't threaten me. Those guys
8 don't frighten me, either, as they shouldn't.

9 So you failed. You failed to address those
10 things. You failed to address the things in my scoping
11 questions. And poor Ron over there is looking at me, I
12 know, because he can't address it because his bosses told
13 him he only can address this. But if this is an open
14 process, if the Army genuinely wants to hear from us what
15 we think -- and the EIS process, along with scoping, says
16 we have to address every comment that comes in -- you
17 either failed to do that or you're lying to me. Those
18 are the only two options. So stop failing, and stop
19 lying. Because I'm going to ask you this question again
20 tomorrow and you're going to have the same answer for me.
21 Because what people have to understand is, he who
22 controls the question controls the answer. So how you
23 ask the question in a very limited scale, what is the
24 impacts of Stryker Brigade coming to Hawaii -- you notice
25 they only said they coming to Hawaii, yeah? They never

1 said anything about is it cheaper in the long run to move
2 them to Fort Lewis, Washington, like the 1st Brigade is
3 already there? Of course it's cheaper, of course it
4 would make sense, except for politics from Senator
5 Dan Inouye.

6 Almost pau, Auntie.

7 MS. AMARAL: Mahalo.

8 MR. WILLIAM AILA: Mitigating effects on those
9 sites that are important, but the EIS doesn't describe
10 how to restore. How do you restore mana after you burn
11 it? How do you restore the sanctity of a site after you
12 inadvertently or intentionally run it over and destroy
13 it? Or, as I just learned this past Sunday at Makua, in
14 a well that was very, very important to my family and all
15 of the people in Makua, how do you restore the mana of
16 that well when it's filled up with about two feet of
17 asphalt? How do you do that? How do I mitigate that?
18 That's a very sacred site, because it started as a
19 spring, which was turned into a well, which when we went
20 in to clean it out and restore the mana found that it was
21 capped with asphalt. We dug two and a half feet through
22 the asphalt now. You know what? There's still more
23 asphalt there. I hope we don't have to go fifteen feet
24 of asphalt to get to that spring. So how do you explain
25 to these guys how to mitigate those kinds of things and

1 the loss of mana when you do those kinds of things to
2 sacred sites? It's not just a pile of rocks, and you've
3 heard me say it over and over and over again.

4 And just when we get somebody like you, Colonel
5 Anderson, understanding, you know what they do to us?
6 They ship you off and they bring somebody else in, and we
7 gotta start all over and explain all over again. Because
8 we're stuck with the kuleana to restore the mana; and in
9 some cases we're honored to be the ones to be able to
10 restore that mana.

11 Please do not include the Programmatic Agreement
12 as part of the EIS. It has no place in this EIS. It
13 satisfies another law. So please remove -- and for the
14 Makua EIS -- where's Peter? -- please do not include the
15 Programmatic Agreement in the Makua EIS. I'm telling you
16 right now, it has no place in there. That is a different
17 law than NEPA.

18 And, finally, the biggest failure of all of this
19 Draft EIS: It not only fails to consider, but it fails
20 to address a clean-up plan. What are we going to do with
21 these areas when they're pau? What are we going to do
22 with Schofield and the impact areas when Senator
23 Dan Inouye is no longer there with the political clout --
24 you guys don't want to hear this, but I'll say it,
25 because you know it in your na'au, you guys that have

1 been in the Pentagon know it -- when he is no longer
2 there with the clout to keep the 25th here, because it's
3 much cheaper? I can tell you right now, if Rumsfeld had
4 his way, I think the 25th would be someplace else. It
5 might not be back in the United States. It might be
6 sitting in Korea or it might be sitting in someplace what
7 we call "forward deployed".

8 These guys know what I'm talking about. They
9 can't say it, yeah. But they know what I'm talking
10 about.

11 That's where the Stryker Brigades are going to
12 go. They're going to be forward deployed because the
13 airplanes can't take it in 96 hours to someplace. So I
14 speak the truth; it's tough. They know it; they can't
15 respond to it. But it's going to play out. Some of you
16 may see it in your lifetimes. I will see it in my
17 lifetime. They're not going to be here a couple years
18 after Inouye is gone. You know why? Because whoever's
19 junior in that committee, that sat at Appropriations
20 Committee, you guys don't vote for him or her, and that's
21 where it's going to go.

22 And then all you guys that have shops in Wahiawa
23 and on Mililani and on North Shore, then you're going to
24 truly learn about what is called an "artificial economy".
25 And it's tough. Your family members and my family

1 members are going to be out of work, but that is the
2 reality that we are going to face. And that is the
3 legacy, the legacy that the Stryker Brigade will leave
4 us.

5 So please try to address the things that you
6 failed to address. Because I stated very clearly many
7 times in scoping; I know I mentioned it to you one time,
8 Ron, at a Mililani neighborhood board meeting. If this
9 is a true and open process, you gotta answer those
10 questions. You gotta get past the "in Hawaii" part. You
11 know, the "in Hawaii" part is something that's
12 artificial; and the sooner we recognize it, the sooner we
13 can get the real work done to deal with it. And I'm
14 sorry, a lot of people are going to -- there's going to
15 be upheaval. But that's the reality of the situation.

16 Auntie, thank you for the time.

17 MS. AMARAL: Mahalo.

18 MR. WILLIAM AILA: See you guys in Waianae
19 tomorrow.

20 (Applause)

21 MS. AMARAL: Thank you.

22 The next speaker is Suzanne Marinelli.

23 MS. SUZANNE MARINELLI: It looks like a deja vu.

24 It seems like I was just doing this yesterday, except
25 this is further to read from tonight.

1 When I came here tonight to attend this meeting,
2 my timing was curious, I suppose, because I got here just
3 as somebody was being arrested and hauled away, which is
4 identical to what happened last night, and it troubled
5 me. And, so, I need to say that I'm not here tonight to
6 address the documents that we're here to consider. I
7 still haven't had time to read them since yesterday, when
8 I hadn't had time to read them. But I'm here to address
9 a process concern that has troubled me deeply for the
10 last 24 hours. And in order to do this, I gotta take you
11 all the way back to when I was 18 years old. So here we
12 go.

13 I left a coal mining community in Virginia when
14 I was 18 to go off to college, and I was privileged to be
15 invited to attend the College of William & Mary, which is
16 a very prestigious institution, and it was a great honor
17 to be asked to go there. So I left after a semester and
18 got married and had kids and had a divorce. And I've
19 lived 18 years in Williamsburg, Virginia. And if you've
20 never been there, you can't know what that means. Five
21 thousand miles away from here is a completely restored
22 Colonial town. The restored area is one mile long and
23 three blocks wide, and it is the Colonial town of
24 Williamsburg, Virginia, where the American Revolution
25 essentially began, when the gunpowder was stolen from the

1 powder magazine there. And the people that populated my
2 community were not only the people of the 20th Century
3 world that I lived in but also the people of the 18th
4 Century world, when my country was being formed. Thomas
5 Jefferson populated my town; Samuel Adams did; Patrick
6 Henry did; Abigail Adams did. These people were part of
7 my everyday life. And through living in that Colonial
8 town for 18 years, which at that point was half of my
9 life, I absorbed the foundations of my country
10 completely. Its origins are part of my bones because of
11 that incredible experience.

12 Two miles away from me was Jamestown, Virginia,
13 where one of the first colonies of the western intruders
14 started, nine miles the other direction, Yorktown,
15 Virginia, where the Revolution ended. So I had lived in
16 areas where the defining conflicts of my country were
17 part of my everyday life. And, so, my patriotism is
18 founded in the beginnings, the origins of what this
19 country came to be. So it's a long way of saying I'm a
20 Jeffersonian. Mr. Jefferson is a very important part of
21 my awareness.

22 The Bill of Rights is, too. It's a very
23 precious document to all of us. And I'm told that we are
24 fighting a war on the other side of the world to protect
25 freedoms and liberties, and I'm concerned about some

1 parts of that. I'm also concerned at what I perceive to
2 be a violation of the Bill of Rights, happening both last
3 night and tonight.

4 Mr. Jefferson and I are in complete agreement,
5 that informed dissent is vital for the continued health
6 of the country that we love. Without it, acting as the
7 wind, the sails of democracy will not billow. They will
8 not move the ship of state through these uncertain seas
9 in our cultural and sociological and environmental,
10 turbulent world that we are living in, without informed
11 dissent. Without the ability to dissent and disagree,
12 our country will die. And I don't want to see my country
13 die because I love it.

14 When I went off to college at William & Mary, I
15 went to a school that was born in 1693, so it's been
16 around 310 years. It was actually chartered before
17 Harvard, although they started classes first. William &
18 Mary was the first school to admit women. They had a
19 school for Indians. They were called then
20 Native-Americans. So they were very progressive. They
21 were creating this amazing thing that has endured
22 beautifully to this day. But things get stale. And I
23 wish to share that after the Civil Rights Act passed,
24 poor William & Mary had to go and start admitting Black
25 people to the college, and it was a very great task for

1 the people of Virginia for these things to happen. Well,
2 William & Mary had to admit three young Black women one
3 year. And there were 5,000 people in the campus. And by
4 some absolute miracle of planning, those three women
5 wound up in the same basement dormitory room together.
6 And I'm going to suggest to you, and I don't mean to be
7 unkind, but I'd like you to take the analogy to heart,
8 that when the people who are engaging in informed dissent
9 are not being allowed to be present here, then we are
10 putting those people in the college basement, hoping they
11 will go away, but they will never go away. This concerns
12 me.

13 I know that this is private property. I heard
14 this last night; I heard it again tonight. I know that
15 all of your meetings have been set on private property.
16 And I cannot in all consciousness accept that you are the
17 victims of the laws of private property. I cannot
18 believe that this is anything but by design that these
19 people can't come in here; and that grieves me. So I'm
20 not coming here to yell at you, but I'm coming here to
21 share my concerns. And I want to know if you will defend
22 the Bill of Rights with me or if it's something that you
23 fear.

24 This is a hearing, and I know that -- I teach
25 process, and so I know that a hearing is not just for you

1 to hear me, but for all of us to hear one another; and,
2 so, what I have heard, it's not democracy, and I'm very
3 concerned that the Bill of Rights is being devastated
4 here tonight.

5 I ask you to extend the hearing period for 90
6 days -- or the comment period for 90 days, and I ask that
7 you listen to the dissenters amongst you, that you allow
8 signs in your presence, that you do not fear the Bill of
9 Rights. It will not harm you.

10 (Applause)

11 MS. AMARAL: We have come to the end of our
12 registered speakers and are about to close the meeting
13 now. I would like to see if the Colonel wants to make
14 some concluding remarks.

15 So I'll call upon Colonel David Anderson to make
16 some final remarks.

17 Thank you.

18 COLONEL ANDERSON: First off, let me express my
19 appreciation to everybody that participated tonight. I
20 want to personally thank every one of you that came here
21 tonight, and particularly those that offered their
22 comments to us. All of your comments, written and oral,
23 will be taken into consideration as we go forward with
24 the preparation of the Final Environmental Impact
25 Statement.

1 For those of you who were not able to give oral
2 testimony this evening, we will continue to accept
3 written comments throughout the public comment period.

4 For those that commented tonight, again I want
5 to thank you personally for taking the time and the
6 energy and the great amount of thought and preparation
7 that went into your comments that you made tonight.
8 Those are important. That's why we do this public
9 process, so that we have the opportunity to hear from the
10 people who will be impacted by this proposed action. As
11 I mentioned when we started, this is a proposed action,
12 and your comments will be incorporated, and the Final
13 Environmental Impact Statement will be used as a
14 decision-making tool to determine -- to decide whether or
15 not the Stryker Brigade actually comes to Hawaii.

16 Again, I appreciate everybody's participation,
17 and we look forward to doing this again tomorrow evening
18 at Makaha.

19 Thank you very much.

20 (Proceedings concluded at 9:46 P.M.)

21

22

23

24

25

1 Wednesday October 29, 2003 7:30 p.m.

2 --o00o--

3 MR. MARTIN ORTOGERO, JR.: Comments on the
4 Draft Transformation 29 October, 2003. Thank you for the
5 opportunity to make comments tonight on your Draft
6 Transformation document. I'll only make a few comments
7 about the Draft EIS, but I will be submitting written
8 comments that are more detailed in nature to you no later
9 than 19 November 2003.

10 I just need to confirm the mailing address,
11 which I did, and I would like to know how you will respond
12 and/or address my concern in the Final EIS. Will there be
13 another public forum? Or what is your plan? Because I
14 made comments at the scoping meeting and my comments were
15 not in this final draft. I made verbal and written
16 comments.

17 Before I begin I'd like to say that I'm
18 making these oral comments to express my concerns about
19 the Draft Transformation EIS and in written form as a
20 private citizen and resident of the Mililani Mauka
21 community.

22 The Draft EIS is a very detailed document.
23 It appears to be complete. But for the unfamiliar with
24 the EIS it's a very intimidating and challenging document
25 to read. I mean over 1500 pages and figures, a lot of

1 technical data. Anyway, to me it looks like the Army has
2 done its homework. I'm sure it has done to others.

3 They identify problem areas. They have
4 plans to fix problem areas 'cause for the most part
5 there's a road map to fix the bigger problems.

6 It's my hope that the state, county
7 governments not only use their technical EIS people in
8 evaluating and analyzing this EIS but also bring in all
9 facets of community planning to reach the bottom-line
10 recommendation.

11 Bottom-line to me, we the community
12 residents of Launani Valley, Mililani Mauka, Wahiawa,
13 Mililani Town, Wheeler Air Force Base and Schofield will
14 have to live with what comes out of this project.
15 Hopefully, there will be more good pieces than bad ones.

16 I'm almost finished reading the document,
17 but I do have some comments focusing on three areas at
18 this time: Air space management, noise and state/county
19 infrastructure.

20 But first a general comment. In April 2003
21 I was one of four persons that made verbal comments to the
22 first public scoping meeting at Leilehua High School. So
23 when I reviewed the Draft EIS my input was not documented.

24 I voiced concern focused on aircraft flight
25 safety -- and by the way I will include a copy of that

1 statement in my written report.

2 Additionally, I faxed written concerns
3 about the increased training noise from East Range which
4 will impact upon the Launani Valley and Mililani Mauka
5 residential area. That fax was not documented in the
6 Draft EIS.

7 Now at the April 2003 meeting Colonel
8 Waggner, the facilitator, assured us that our voiced and
9 written concerns would be documented and answered in the
10 draft/final EIS. And it wasn't.

11 The Final EIS needs to include my voiced
12 concerns and faxed concerns in the appropriate section of
13 the final document.

14 Air space management. Reference Page 4-16,
15 Paragraph 4.4 Airspace. This section lacks a discussion
16 on physical hazards. Specifically there should be
17 detailed discussions on aircraft operations, a brief
18 description on the existing conditions. Operative word
19 "existing conditions".

20 At a minimum a map should be provided that
21 clearly shows the aircraft flight tracks for local
22 helicopter departures, IFR 06 departures and standard VFR
23 departures, all of which overfly the Launani Valley and
24 Mililani Mauka residential areas.

25 2. Probable impact. A brief description

1 of the Wheeler Army Airfield Accident Potential Zone.

2 Operative word "Accident Potential Zone". There should be
3 some discussion on event of aircraft accident mishap and
4 dump fuel and munitions from helicopters, C-130, C-17,
5 UAVs, etc.

6 Mitigating measures. A description of how
7 U.S. Army and other services can work closely with state,
8 county officials to ensure there is safe and compatible
9 air operations.

10 Recommend Final EIS have discussion on
11 physical hazards associated with possible aircraft mishap
12 such as crashes into residential areas of Launani Valley,
13 Mililani Mauka or Wahiawa.

14 It is remotely possible that an emergency
15 situation would result in a release of ordnance or fuel
16 into the residential community area during a training
17 fly-by.

18 Assumption must also be made that a C-130
19 or C-17 could be fully loaded, quotes, "fully loaded" with
20 equipment and personnel to include munitions during a
21 biannual full training deployment or actual deployment
22 when an aircraft mishap occurs.

23 What is the impact? And would state,
24 county, police, fire department and medical personnel
25 respond adequately, operative word "adequately" to such an

1 aircraft mishap?

2 Would state, county and Wheeler Army
3 Airfield resources be sufficient to respond and take
4 necessary actions to save life and property in the event
5 of a major aircraft accident in the Launani Valley,
6 Mililani Mauka or Wahiawa areas? The Final EIS must
7 discuss this probability and any plans to adequately
8 address the resolution.

9 Reference Page 4-16 Paragraph 4.4 Air
10 Space. The EIS demonstrates that fixed-wing aircraft,
11 increased number of helicopters and overflight UAV flight
12 activity will not increase at Wheeler Army Airfield and
13 Schofield Barracks Military Ranges.

14 However, it's obvious this new activity,
15 transformation, will increase aircraft activity threefold.
16 If transformation will increase training, then
17 correspondingly aircraft activity will increase.

18 So without a doubt aircraft noise, movement
19 and flying will impact the adjacent residential areas to
20 Wheeler Army Airfield, Schofield Barracks East Ranges and
21 all other Hawai'i training areas touched by
22 transformation.

23 Recommend that the Final EIS for
24 transformation be coordinated, operative word
25 "coordinated" with the FAA, not just to provide them a

1 copy of the EIS.

2 Formal coordination on the Final EIS report

3 is essential to flight safety in the Central O'ahu

4 Airspace Region. The new introduction of large fixed-wing

5 aircraft, i.e. C-130, and C-17 plus the UAVs flying above

6 and increased number of helicopters in the Central O'ahu

7 airspace demands major safety concerns for airspace

8 management and control.

9 It would be prudent to have the FAA review

10 its existing regulations and directives governing air

11 space management and control of the Central O'ahu region

12 to ensure accuracy, currency, and applicability so flight

13 of safety is maintained. Outdated airspace management

14 regulations, procedures can then be changed accordingly or

15 new processes regulated.

16 With an increase of military helicopters

17 flying training missions over all Mililani, Wahiawa

18 residential areas, you know, helicopters have no flight

19 restrictions except to stay a minimum of 100 feet away

20 from any ground object.

21 New UAVs flying training patterns high

22 above these helicopters; and now large fixed-winged C-130

23 and C-17s aircraft flying training patterns in and around

24 Wheeler Army Airfield, coupled with civilian helicopters,

25 small aircraft, state/military aircraft and large civilian

1 airliners, obviously the Central O'ahu airspace has

2 changed and will fill up quickly and dramatically.

3 A relook, operative word, "relook" of FAA's

4 governing directives, regulations of airspace environment

5 in the Central O'ahu region and the proposed action of

6 transformation would ensure the safety and quality of life

7 of all Hawai'i citizens living in the Mililani Town,

8 Wahiawa Town, Launani Valley and Mililani Mauka areas.

9 Another concern about airspace I had is the

10 concept of use of these aircraft, which the Draft EIS has

11 still left unclear.

12 The Final EIS needs to clear this up. Will

13 these fixed-wing aircraft be permanently based at Wheeler

14 Army Airfield? If not, what's the plan in their use?

15 Will they be flown in to pick up troops and

16 equipment for biannual, monthly, quarterly deployments?

17 Will they be parked on alert? How long? Will both C-130

18 and C-17s be flying out of Wheeler Army Airfield? How

19 many? Will only equipment be flown out?

20 The Final EIS needs to address all these

21 concepts to get a better understanding of flying

22 activities transformation brings to Wheeler Army Airfield

23 and surrounding residential areas.

24 Second concern: Noise. This item covers my

25 concern in the written comments I faxed to you at the

1 scoping meeting. One obvious shortcoming in the Draft EIS
2 was how poorly it addresses the interests of the Launani
3 Valley and Mililani Mauka communities. And this is done
4 in a very subtle way.

5 Certainly, one would have to have lived on
6 island and specifically in Central O'ahu to know that
7 these communities are the fastest growing on-island
8 communities in Central O'ahu. And they border Wheeler
9 Army Airfield and Schofield Barracks East Range.

10 In the Draft EIS when any residential
11 communities around Schofield Barracks are mentioned only
12 Mililani Town and Wahiawa are mentioned. There is very
13 little recognition of the Launani Valley and Mililani
14 Mauka communities when discussing the impact or potential
15 impact of transformation from Wheeler Army Airfield and
16 East Range.

17 So by omission, it has overlooked a
18 significant sector of people that are right in the middle
19 of the transformation project.

20 Examples: Figures 2-3 which describes the
21 geographical lay of the East Range is outdated. By that I
22 mean, the Launani Valley and Mililani Mauka residential
23 areas are represented in its very early stages of
24 development and not in its present day size or footprint.

25 Both communities have grown in footprint

1 size and population and they now border past the main
2 training areas in East Range.

3 Also there are three new public schools in
4 the Mililani Mauka areas not represented on the map. By
5 having these communities truly represented on your map,
6 the appropriate approval authorities of the Final EIS can
7 readily see how noise and aircraft overflights does impact
8 on these communities and schools.

9 Another reference. All references in the
10 Draft EIS to noise from Wheeler Army Airfield and East
11 Range as a result of transformation always describes its
12 impact to Mililani Town, which is way south of the East
13 Range and across H2 Highway. No mention is made of noise
14 impact to Launani Valley or Mililani Mauka.

15 The Final EIS needs to address the noise
16 impacts on Launani Valley and Mililani Mauka areas.

17 So I agree with the Draft EIS wherever it
18 states, "the training noises from the East Range have
19 negligible impact on Mililani Town."

20 Another subtle example of how Launani
21 Valley and Mililani areas are left out of the report is
22 there is no noise abatement program mentioned in the
23 report for these communities.

24 However, apparently there is one mentioned
25 for the Wahiawa community. In Chapter 4, Page 4-34,

1 paragraph 1, line 10-11, the EIS makes reference to
2 establishment of a 1,000 foot, 305 meter, noise buffer
3 along those portions of East Range that border residential
4 areas of Wahiawa.

5 However, no such noise abatement program is
6 mentioned for the Launani Valley or Mililani Mauka
7 communities. The Final EIS needs to address this
8 shortfall. Because of the growth and now close proximity
9 of Launani Valley and Mililani Mauka, why isn't there a
10 noise abatement program for these communities?

11 Lastly, the Draft EIS does not addresses
12 whether a noise measurement study was done in the Mililani
13 Mauka and Launani Valley communities to determine what
14 real impact transformation will have, especially since
15 there will be an increase in training.

16 To my knowledge no measurement was ever
17 done of the training noise that comes from East Range.
18 This requirement needs to be addressed in the Final EIS so
19 that a federal, state noise baseline can be established
20 for these residential areas.

21 This noise baseline can be used to compare
22 noise infractions from the East Range to these residential
23 communities.

24 The last item, state, county
25 infrastructure. Transformation will bring an increase in

1 student population to our schools. However, the Draft EIS
2 doesn't address how the U.S. Army will plan to help
3 state/county with resources in this area. Our schools are
4 crowded and we need help with resources to accommodate an
5 increase in student population. Not only in buildings and
6 space but in teachers and support staff, and resources to
7 operate a quality school system.

8 The Final EIS needs to address what the
9 U.S. Army intends to bring, operative word "bring" in this
10 area before and when transformation is implemented.

11 Secondly, the Draft EIS states that there
12 will be an increase in vehicles using our highways.
13 However, the Draft EIS does not address how the U.S. Army
14 plans to help maintain our highways or widen them to
15 accommodate their vehicles.

16 Our highways and country roads are
17 inadequate for future population growth. Scarce resources
18 make it difficult to maintain. The Final EIS in
19 transformation needs to address what the Army intends to
20 bring to resolve in this area or help in this area.

21 Conclusion. That's all I have now. Again,
22 I have more in my written comments. I want to again thank
23 you for the opportunity to address this forum on the Draft
24 EIS for transformation.

25 As a private citizen I agree with the

1 concept of transformation. I believe it's needed for the
2 defense of our country and it's a good concept. But I
3 believe transformation will be implemented. It needs to
4 address all environmental issues and ensure they're
5 adequately resolved.

1 PROCEEDINGS

2 (Opening Pule; processional led by Ms.

3 Keanuenueokalani Nui Amamau DeSota.)

4 MS. AMARAL: Aloha. We want to welcome all of you

5 here this evening for another period of public comment on

6 the -- with the U.S. Army on the draft Environmental Impact

7 Statement. My name is Annelle Amaral, and I am one of the

8 facilitators here this evening, and before we begin, what I

9 would like to do right now is to call up Colonel David

10 Anderson, the Garrison Commander of the U.S. Army to make a

11 few opening remarks. Colonel Anderson.

12 COLONEL ANDERSON: Aloha, and good evening. Thank

13 you, Annelle, for opening this meeting. I'm Colonel Dave

14 Anderson, Garrison Commander for the U.S. Army Hawaii, and

15 again, I want to thank everybody for being here this

16 evening and participating in this public meeting. This is

17 the third of six that we have scheduled.

18 On behalf of Major General Eric Olson, the Commanding

19 General of the 25th Infantry Division and U.S. Army Hawaii,

20 I'd like to welcome you to tonight's community meeting on

21 the draft Environmental Impact Statement for the

22 transformation of the 2nd Brigade of the 25th Infantry

23 Division to a Stryker Brigade Combat Team.

24 Tonight we're here to listen to your concerns and

25 gather your comments on this draft Environmental Impact

1 Statement. Facilitators will coordinate tonight's meeting
2 and provide an effective system of gathering input. Your
3 role is to provide additional input on the environmental,
4 cultural, or any other concerns you believe should be
5 addressed and analyzed in the final Environmental Impact
6 Statement.

7 Your input is important. That's why we're here
8 tonight is to gather input and to take into consideration
9 all comments. Over a year ago we started with a
10 preliminary draft Environmental Impact Statement, and,
11 based on public comments, have made significant changes to
12 that initial draft. This is the results of a year's worth
13 of work and public comment and interaction. We think that
14 it's a good document, but we think that additional public
15 comment will make it even better.

16 The Environmental Impact Statement is a
17 decision-making tool which will assist the decision makers
18 in determining whether or not a Stryker Brigade comes to
19 Hawaii. That decision has not been made, so again, the
20 public comment is very, very important.

21 The Environmental Impact Statement is the most
22 comprehensive document that can be prepared under the
23 National Environmental Policy Act.

24 I know that everyone is anxious for the meeting to
25 begin, so without further delay, I'd like to turn the time

1 back to Ms. Annelle Amaral. Thank you very much.

2 (Applause)

3 MS. AMARAL: Thank you, Colonel. Again, before we

4 proceed, I'd like to introduce the people that are seated

5 here at the head table and taking your -- the people that

6 are taking your comments as well. The first person who is

7 farthest away from me, closest to you, is Mr. Ron Borne.

8 He is the Army transformation manager and has been with

9 this process since its inception. Closest to me is

10 Mr. Mark Katkow, who is with the Office of the Judge

11 Advocate General.

12 Seated here on this side of the room are many of the

13 resource people that you had an opportunity to meet and

14 speak with during the open-house period. They had specific

15 responsibility and knowledge of parts of the Environmental

16 Impact Statement, and hopefully you've had an opportunity

17 to talk to them and to get some answers to your questions.

18 So the first part of this meeting is the open-house

19 period to allow the public to ask questions and clarify

20 information about any specific information in the EIS.

21 This now begins the public comment period where your

22 comments are now placed onto the official record.

23 Standing by are actually three court reporters.

24 There's one closest to the television camera. They are

25 taking verbatim transcript of everything that is said here.

1 Also on site is a videographer who is making a video
2 recording of this process. With us this evening are some
3 of the students from Waianae, is that true, high school,
4 assisting with the documentation of this for the 'Olelo
5 station, public information station.

6 Towards the back of the room, just behind the
7 registration table, is another court reporter who is
8 available throughout the evening to take your testimony
9 should you not wish to come and make testimony here at the
10 podium.

11 Also, with us this evening, and I'm going to bring
12 her up, is Noelani Arista. Noelani is acting this evening
13 as the Hawaiian language translator, and so she will give
14 us some instructions. Aloha, Noelani.

15 MS. ARISTA: Aloha mai kakou. He wahi kakou no wau,
16 no na makou ina ka po'e 'olelo makuahine. A i na loa'a
17 makou. E ha'i i ka 'olelo ma ka 'olelo Hawai'i. Hiki ia
18 'oe ke, ke unuhi nau iho. Ai 'ole waiho i kou 'olelo. A
19 unuhi ia mahope mai i ka palapala. Ai'ole i na mamake 'oe
20 ia'u kokua aku ia 'oe. 'Oia 'oe 'olelo 'oe e ka'olelo ana
21 unuhi wau no laila, hiki ia makou ke hui pu mamua a
22 ho'onohonoho i kau 'olelo. 'Oia wale no. Mahalo.

23 I'm just explaining to those people in the audience
24 who are going to be speaking in the Hawaiian language that
25 they have several options for translation this evening.

1 They might choose to speak and translate for themselves
2 what they have said for the audience. They might choose to
3 speak and leave their speech for translation later for the
4 transcripts, or if they're interested in having
5 simultaneous translation, if they would meet with me
6 beforehand and we could discuss if they have a piece of
7 paper maybe to go over or if they want it simultaneous,
8 however. Thank you. Aloha.

9 MS. AMARAL: We have three facilitators here this
10 evening. Right in front of me, some of you already know
11 her, is Miki Lee, one of our facilitators. Where is Louie?
12 And also Louie Chang is the third facilitator. So you'll
13 see us spelling one another throughout the evening. The
14 purpose of the facilitator, quite frankly, is to monitor
15 for decorum and timing and process.

16 We ask that you keep your testimony to a five-minute
17 period. We remind you as you near the end of the
18 five-minute period. For those of you with written
19 testimony, your testimony can be entered directly into the
20 record in its entirety. It's not necessary to read it into
21 the record because it can -- it can simply be placed in.
22 And so we would ask you to summarize the contents of your
23 written testimony.

24 Because feelings run very high on the substance of
25 these meetings, we must have a few basic rules. First, we

1 ask that we treat one another with respect. While we may
2 not be able to agree on the issues presented this evening,
3 we are able, I believe, to allow everyone to express their
4 own point of view so that they may be heard uninterrupted
5 and undisturbed.

6 We ask that you monitor yourself. There is no need
7 for vulgar language or gestures. I think that's something
8 that is easy enough for us to restrain ourselves in. If
9 you need to have a conversation, rather than having it at
10 the back of the room, which sometimes makes it difficult
11 for us to hear at the front of the room, difficult for the
12 court reporters to pick up what is being said during the
13 public comment period, so instead just take your comments
14 and your discussions outside the room, finish it there so
15 we can hear what is being said in here.

16 Those of you with cell phones, we would ask that you
17 put it on silent. The ringing of the telephones often make
18 it difficult, again, to discern the words of the speaker.

19 If there is any disturbance this evening, the
20 facilitators reserve the right to call for a break or a
21 time out that allows us sometime to try to restore order.
22 If we are unable to do that, of course, we will simply
23 terminate the public meeting.

24 The purpose of facilitated discussions is to allow
25 for a neutral environment where all voices are heard, all

1 people are treated fairly and equally. The facilitators
2 will work to maintain that neutrality and assure all
3 speakers the ability to share what is in their heart and
4 their mind regardless of their position, and that is our
5 promise to all of you gathered here this evening.

6 We will now begin the public comment period. What we
7 will do is we will call three speakers in a row just so
8 that you know that you're coming up next. The first
9 speaker is Keanuenueokalani Nui Amamau DeSota, the second
10 is James K. Manaku, Senior, and the third is Bill Prescott.

11 Auntie Frenchy, we're going to bring the microphone
12 to you; is that correct? Oh, you're going to come up.

13 Thank you. Mahalo.

14 MS. FRENCHY DeSOTA: Good evening. Ko'u inoa
15 Keanuenueokalani Nui Amamau, au na mua wahine Kilani
16 Kakai'i Kai Pua. I'm Scott-French. This is who I am. I
17 am the spouse of John Corbert DeSota. I have 6 children,
18 27 grandchildren, 14 great grandchildren. You see, we get
19 hard time, no more TV up here.

20 I come tonight to share and wonder who put this
21 together? Whose idea was to go to, quote, unquote, private
22 places? You better tell the guy quit smoking what he's
23 smoking because I never seen anything like this in my life,
24 and I'm 75 years old. Pat, we're 75, aren't we? We're
25 not, we're 74.

1 So I wonder, and then how much does this cost? How
2 much does this public process cost when we could have gone
3 to the schools? But then after reading the paper and
4 watching TV, all I can say is shame. Shame that you
5 disagree with somebody, you invite them to come in your
6 house, but because they come in here with paper, you get
7 them arrested. Hilahila. Hilahila.

8 But I want to tell you this, that if I do not say a
9 word, my great grandchildren one day will say, how come
10 grandma never stop? Now I got to buy water. Because in
11 this environmental statement you've got to be a rocket
12 scientist to understand all 50 pounds of it. It's
13 insulting to say the least.

14 It will have impacts on your ground water, but that's
15 not jurisdictional, so it's okay. It's okay that you gonna
16 contaminate the water or do whatever you can because
17 somebody said -- I think it was the Corps of Engineers said
18 it was non-jurisdictional, whatever the -- whatever that
19 means.

20 And on top of that, we're talking about two pages of
21 corrections. I mean, it's -- you don't even know what
22 they're talking about. It's abbreviation. This is not for
23 us to contribute mana'o. In other words, old lady, take
24 your mana'o and beat it. We're going to do what we can
25 because we got the bread to do it. We'll use your tax

1 dollars against you when other people don't even know what
2 the heck kuleana is.

3 You know, I feel -- I don't know how you could do
4 this. This is an island community. Take it to Arizona
5 desert. Take it to the deserts in America. Why you want
6 to do this to Hawaii?

7 And those of you who support them doing this, better
8 look at why you're doing it. You support blindly because
9 you're getting a retirement check, is that it? Is that it?
10 I've known prostitutes in Hotel Street that held out for
11 more. That's not vulgar. I promise I'm gonna be good.

12 But, you know, I get so frustrated. Bill, you know I
13 love you, but tonight I came out specifically so that I
14 want to challenge this democracy.

15 Next month in November my grandson goes to Iraq.
16 Well, the Bush whacker sits home with his three daughters.
17 Why you want to take my grandson to Iraq? Why you want to
18 do this to us? You take my children. You take my land.
19 You take my cultural sites, oh, and you even call me a
20 Christian. That's supposed to be an insult. The chimps.
21 At least I know my culture. I'm not a coconut.

22 But it gets me very upset, Colonel Anderson, it gets
23 me very upset that this would happen, that people cannot,
24 in this day and age, voice their opinion. We have signs.
25 Whatever. Shame on you. Hilahila. Hilahila. And your

1 interpreter gonna tell you what that means, hilahila, but I
2 feel shame. Why do I want to support this when everything
3 in your 50 pounds of material tells me not to, you know,
4 and I don't have the brains that a lot of you got, because
5 I went to an English standard school. That was when they
6 were trying to colonize me and said don't speak Hawaiian,
7 go to this English standard school called Robert Louis
8 Stevenson, the normal school, Robert Louis Stevenson and
9 then Roosevelt. Oh, but I got bad grades at Roosevelt, so
10 they kicked me out and I went to Farrington.

11 I share this with you and I'm rambling because I
12 don't know what else to say to tell you stop this. Why
13 everybody in the world hate us? Why are you going to take
14 my grandson to Iraq? And you tell me he's going to -- he's
15 going to survive if you have a Stryker force here? I doubt
16 it.

17 My other grandson went. My nephew went. People are
18 dying in peace time over there more than they did during
19 the actual war. What are we doing in na po'e Hawaii? What
20 are you doing? Wake up. If you want to sell your butt, go
21 down Hotel Street, line up with the rest of the guys, but
22 think about the children of the future. Not only think
23 today, eat now, and then kukae later. Because that is what
24 is happening to Hawaii. Everybody go home to their state.
25 Everybody leave their stuff here.

1 On the 11th of November, Kaho'olawe is coming back to
2 the State. Is it clean? No. \$4 million cleaned it? No.
3 Who cleaned it? The Navy. Oh, isn't that white of them.
4 Navy uniform white, yeah. That island will never be
5 cleaned completely. And I say this all the time, my
6 neighbor's dog come in my yard and kukae, she better come
7 clean 'em. If my dog go in her yard and kukae, up to me, I
8 got to go clean 'em, in order that we be friends. How are
9 we going to come together in this day and age when these --
10 when these things happen, and remember, Senator Inouye is
11 getting old. Who's going to replace him after he goes?
12 All for the pu'ukala. Hewa. Hewa na po'e. A'ole hia
13 po'e. A'ole. A'ole na po'e Hawaii. Na po'e aloha.
14 Mahalo. Mahalo e ola.

15 (Applause)

16 MS. AMARAL: Mahalo, Auntie Frenchy. James Manaku.

17 MR. JAMES MANAKU: Good evening and thank you. My
18 name is James Manaku, Senior, concerned parent and
19 grandparent. I have five children, eleven grandchildren,
20 all born here in Waianae, and I'm also concerned. And, you
21 know, for me, even harder because I have family that's in
22 the service, and as a hunter, I understand the need to
23 practice. I really understand that because, you no
24 practice, you not gonna come home with nothing. And we all
25 want our children to come home.

1 So, for me, it's really hard, but for this project,
2 it's not that hard. As you folks know -- may know, I
3 reluctantly supported the military in Makua because of the
4 children that we have in the service, but this is something
5 completely different. This has nothing to do with -- you
6 know, I never have to read the report. Just looking at the
7 route they're going through, just looking at the route, you
8 can tell that it's not right. This is critical habitat.
9 They going through critical habitat. They say they have no
10 choice.

11 You know, I still getting kind of -- inside of me I'm
12 still wondering, what enemy are we looking -- are we
13 preparing ourselves for? Yeah? I mean, I can remember --
14 you know, I was born after the war, but, you know, I can't
15 understand these things, but in these modern times we're
16 going to have other nations attacking other nations? I
17 cannot see the need for us to be so, you know, wow, carry
18 one big stick so much.

19 We're not supposed to be carrying one big stick.
20 We're supposed to be a nation that -- how do you say it --
21 makes other nations feel comfortable, yeah? But if we keep
22 on making the stick bigger and bigger, wow, if I was one
23 small nation, I would worry.

24 But anyway, the proposed routes, even when I'm
25 looking at that, it would take away critical habitat for

1 endangered species. You know, it was the Federal
2 Government that says we need to protect this thing, and
3 they did. Now they're saying we don't need that habitat no
4 more. Gentlemen, we do need it. It's very important.
5 It's very, very important. If we don't protect what we
6 have now as an island, what will happen to us?

7 You know, I haven't been to Hong Kong, but, you know,
8 my goodness, I heard that it's not an island anymore, yeah.
9 And I wouldn't want to leave that for my children. My
10 biggest concern is what's going to happen to them. How
11 will they survive after you folks? And, hopefully, we
12 become a nation and everybody's gone, but how will they
13 survive if everything is dirty?

14 Auntie brought up one good thing. We have two
15 beautiful, beautiful valleys on the other side of the
16 island. Beautiful. Called Waiahole Waikane. I'm a
17 hunter. You know, when I walk through the valley, we can
18 see all that ammunition. It's still there. It's still
19 there, and it's frightening. I used to go into Makua, walk
20 next to one bomb about this (indicating) high, and about
21 this (indicating) long. You know, one day they gonna put
22 one truck on top, that thing gonna explode. All that lying
23 on top there, good thing they never set 'em off.

24 And that's just and when -- by the way, when I went
25 in there, it was still legal. We never had fence. They

1 never had signs, yeah. And today it's different. Okay. I

2 can appreciate that because I know what happened there.

3 You know, I was up there when that man killed himself,

4 yeah, and it's horrible.

5 So now you folks want to start one noddah route

6 throughout our community, and it's not our community, gang.

7 If you folks know, it's going along Schofield, all the way

8 in the back to Dillingham Airfield, yeah? Okay. New road,

9 never been there before.

10 I thought you guys made one private place so I can

11 talk longer. I Portuguese. Now, I gonna talk Portuguese.

12 We really, you know, I cannot -- I cannot see a need for

13 this, yeah. If you folks want to use present roads that we

14 have, I still get concerns, but, you know, not to make

15 another route. Please, don't do that. Don't do that.

16 You folks are going to hurt the environment

17 tremendously. You folks are going to take away critical

18 habitat. If that's the case, then why don't we just

19 eliminate all of this BS, and say, there's no such thing as

20 critical habitat, there's no need to provide critical

21 habitat, and then I can be more understanding. Then I can

22 wake up in the morning, and go, okay. They gonna blow up

23 over here. We cannot do nothing. You know, I can

24 understand that.

25 But other than that, please, don't do that to us.

1 Thank you.

2 (Applause)

3 MS. AMARAL: Mahalo, James. Next is Bill Prescott

4 followed by Dean Toyama followed by Larry Jones.

5 Mr. Prescott.

6 MR. BILL PRESCOTT: Good evening. My name is Bill

7 Prescott. I'm a kanaka maoli. I'm 71 years old, by the

8 way. I own a home on Hawaiian homelands in Princess

9 Kahanu.

10 First, I want to say that I believe that the military

11 did a terrific job on the Environmental Impact Statement.

12 Secondly, on behalf of all the kanaka maoli who have served

13 in our armed services and all the kanaka maoli who are now

14 serving their country, I want to extend our thanks and our

15 appreciation for all that you are doing to protect the

16 environment, while still providing the necessary training

17 for those who may be put in harms way for our country.

18 Mahalo. Mahalo nui loa.

19 (Applause)

20 MS. AMARAL: Dean Toyama followed by Larry Jones

21 followed by Pearl Campbell. Mr. Toyama.

22 MR. DEAN TOYAMA: Aloha. My name is Dean Toyama.

23 I'm here to address about the Stryker Brigade, that I'm

24 against it because of our environment. Why I'm saying that

25 is because right now water is our most important thing, and

1 today, as you notice, we're on restriction. By having more
2 people come here, it's going to limit our water.

3 Also, traffic that we having here. More people come,
4 the more traffic gonna come worse. And today, we're trying
5 to eliminate all this traffic that it's creating. Now, you
6 bring in these young people, these young military people,
7 and you see the way they drive on our roads, the accidents
8 that happen, is to do with the military. Can they have the
9 same respect as we have to do when we enter the military
10 base when they come off the base?

11 I mean, I see a lot of military people, flick you,
12 and they just cut you off the road, and they drive so
13 crazy. Most of these young ones when you go up in Wahiawa.

14 Secondly, discrimination, 'kay? I'm a school bus
15 driver. I see a lot of discrimination. Kids don't want to
16 come to the aina. They've been forced to come to the aina
17 because their parents are in the military. You guys have
18 to check out their feeling if they really want to come here
19 or not.

20 Thank you very much.

21 (Applause)

22 MS. AMARAL: Larry Jones followed by Pearl Campbell
23 followed by Ted Pond. Mr. Jones.

24 MR. LARRY JONES: Aloha. My name is Larry Jones and
25 I was born in America, but Hawaii has been my home since

1 1956. And if I had a choice, I would be a citizen of an
2 independent Hawaii. I just want to make three points very
3 briefly.

4 First, when the United States took over Hawaii in
5 1898, it was by a resolution of Congress, not by a treaty
6 as required by the United States Constitution, and thus,
7 was illegal by the U.S.'s own laws. Furthermore, that same
8 Constitution, which for the last two nights, has failed to
9 protect the free speech of our people at these hearings, is
10 not a Constitution chosen by kanaka maoli, but rather
11 imposed upon them.

12 Second, because the United States took over Hawaii
13 illegally, its vast and overwhelming military presence here
14 represents to many kanaka maoli and their friends, the
15 forces of occupation. And I say this with no ill will
16 toward the enlisted men and women. I underline enlisted,
17 many of whom are students of mine whom I teach and respect.
18 They were sent here and they were told that they were
19 coming to do a good thing. They were lied to.

20 Third, since shortly after my arrival here nearly 50
21 years ago, I have perceived that the U.S. Military presence
22 in our 'a'apa aina has not only made our economy imbalanced
23 and dependent, but it has been harmful to our environment,
24 both our social environment and our natural environment.
25 To kanaka maoli, nature is sacred, and is to many of the

1 rest of us, too. It is not to be bombed and desecrated
2 with violent explosions and motorized machines of death.

3 The proposed military expansion of tens of thousands
4 of acres of our aina for purposes which further desecrate
5 what is considered a gift of akua is both unconscionable
6 and hewa and must be opposed.

7 People say Hawaii needs the military economically,
8 and I say kanaka maoli are bright enough and resourceful
9 enough to be self-sustaining without relying upon your
10 forces of death. Please just take your weapons of
11 destruction and leave.

12 (Applause)

13 MS. AMARAL: Pearl Campbell followed by Ted Pond
14 followed by Aly Adachi. Pearl Campbell.

15 MS. PEARL CAMPBELL: Hello. I'm a resident of
16 Waianae. I have plenty, plenty kids and plenty, plenty
17 grandchildren, and I have 10 acres over here in Waianae.

18 I kind of feel hurtful, you guys getting pounded over
19 here, but we cannot help that, yeah. I think is if you
20 folks don't wake up, and, you know, this is Aloha over
21 here, you keep on messing around, fooling around with,
22 yeah.

23 We cannot keep on doing this to our people. I'm not
24 a person that hate haoles. I'm half haole. In fact, my
25 father is -- he's a Key, yeah. He's an ancestor of Francis

1 Scott Key, so I may not talking anything down, only that
2 you got to stop. You know, we tell you people up there
3 that all this got to stop already because only got little
4 bit of us left. You don't even have 10 percent Hawaiians
5 here.

6 We love the world. We gave ourselves to the world.
7 Why come over here and keep on bombing and bombing because
8 we cannot handle already. My heart gonna stay. Not for
9 you, not for anybody that gonna take that away and put an
10 ache in my heart. That's da kine, still get around. Still
11 get around this kind, because I'm alive and well, and aloha
12 is alive and well, and the mana here, you cannot keep on
13 fooling around with them.

14 You destroy this over here, you destroy the world. I
15 love the world. My family is the world. Because we aka
16 the world already. That's all ours. You folks have to let
17 Hawaii rise and let the aloha move things and no talk Akaka
18 bill or anything. Let that nation rise and take care of
19 business.

20 Because no matter what you gonna do, we still love
21 you, because that's the way I am. I know you an imperfect
22 human being. That's the way I am, I'm gonna love you
23 anyways. You guys got to put the costs to them. It's love
24 gotta come across. It's aloha gotta come across, and we're
25 the people about it.

1 You know, we get things that we can explain to you,
2 scientifically, logically, and simply to clean up this
3 mess. Somebody gotta listen, and somebody gotta come down
4 and see what they call aloha people. The people that no
5 more the book, but I get mana'o, brah. I know what I'm
6 feeling, and I know I love you, and I know you a good man
7 and I know you people is good people, and we love everybody
8 because we -- we proved that.

9 You guys gotta listen. Don't put this -- don't put
10 some more over here, silly. You guys only money. Money.
11 I don't know what the trip is about money, economical or
12 what. I don't understand all that. I only understand our
13 people getting pounded and pounded, and they still love.
14 They still loving.

15 Watch out what you guys doing. You guys got to stop.
16 I thank you. Thank you, everybody.

17 (Applause)

18 MS. AMARAL: Ted Pond followed by Aly Adachi followed
19 by Henry Ahlo. Mr. Pond.

20 MR. TED POND: Interesting. Hi. My name is Ted
21 Pond. I've been a resident -- I know a number of you
22 people out here. I've been a resident here of Waianae for
23 43 years. In fact, Frenchy was in here earlier, and her
24 and I came to Waianae about the same time, so I've known
25 Frenchy for that long, and she's a very good friend of

1 mine; however, I do not agree with what she says. I
2 haven't agreed with her for over 40 years. We got along
3 great for the first few years, but it stopped there now.
4 I'm here to say that I'm retired U.S. Army, by the
5 way, and let you know why I came to Waianae. In 1960, I
6 lived in Kailua and I wanted to buy a home. I was a Staff
7 Sergeant in the United States Army, and I could either come
8 to Waianae and buy a fee simple home or I could go to Ewa
9 Beach and buy a leasehold home, and I chose Waianae, and I
10 haven't regretted it one bit since I been here.
11 I bought a home here, a four bedroom, one bath home.
12 It cost me \$17,300. Behind where Tomara store is right
13 now, and that monthly payments was \$93.30, and it was tough
14 to make the monthly payments.
15 Like I say, I'm retired from the Army. I know what
16 the Army is doing for us as being citizens of the United
17 States worldwide because I've been all over the world while
18 I was in the service.
19 I know the importance of this new Stryker Brigade
20 that is coming to Hawaii or hopefully is coming to Hawaii,
21 and I think that we should have the support of all of the
22 citizens of Hawaii. I think it's a very good thing for us.
23 It's part of the service of the Army that is extending to
24 get bigger and better. Not necessarily bigger, but to get
25 better. And remember, to us as -- I consider myself a

1 local person by the way. Al does also. But, remember that
2 this idea was fashioned by a man that just retired from the
3 U.S. Army who was from Kauai, a General Shinseki, I
4 believe. He is the man that was the Chief of Staff of the
5 United States Army, and he's the one that says this is
6 going to modernize the United States Army. And so this is
7 the first phase of what he had planned on doing. So this
8 came from a local person here. So it's not something that
9 was rigged up by unknown people and so forth.

10 So, I want to say that I do support the Brigade --
11 the Stryker Brigade. I think it's going to be good for
12 Hawaii, and I am certain that the U.S. Army will do
13 everything that they can to make sure that it does not
14 disrupt any of the fashion, the life that we are now used
15 to and existing and enjoying. Thank you very much.

16 (Applause)

17 MS. AMARAL: Thank you. Aly Adachi followed by Henry
18 Ahlo followed by Maralyn Kurshals.

19 MS. ALY ADACHI: As she said, my name is Aly Adachi.
20 I'm a life-long resident in Waianae. I came up to ask, I
21 guess, a couple questions. Like Mr. Toyama earlier said,
22 have you guys really thought about the consequences of
23 this? If you're bringing in 800, approximately, military
24 personnel plus 3,000 dependents, we're in a state on an
25 island that is already severely overcrowded. We have our

1 H-1, H-2 freeways which are a joke. They should be named
2 the Hawaii state parking lot instead.

3 So aside from that fact, then the next fact, we're
4 going to be having more military -- how should I say --
5 traffic going in and out of Hawaii. Hawaii has an epidemic
6 drug problem. There's a possibility that could cause an
7 increase in drug trafficking in and out of Hawaii.

8 We also know that there's a -- what is that word I'm
9 trying to find -- a possibility of violence. More violence
10 with more people on the island. We know that military
11 bases have had incidents of violence. We've had incidents
12 here where our military personnel have been involved in
13 either murders -- of course, we've also have some that have
14 been murdered, and for us, that's a shame on our part as
15 well, however, we know that there is a possibility of
16 increase in violence, but none of that is what I really
17 wanted to talk about.

18 I want to talk about and ask you guys this: You guys
19 are talking about bringing in these vehicles, Stryker
20 vehicles, approximately \$2 million for each one, the cost.
21 You guys want to bring in about 300 into Hawaii. That's
22 \$600 million just for the cost of these machines.

23 Now, that's not counting the cost of relocating your
24 personnel, that's not counting the cost of shipping those
25 things out, that's not counting the cost of acquiring the

1 land. What message are we sending to our kids? Right now,
2 even as I speak, somewhere across the United States a woman
3 is being assaulted. Every eight seconds in the United
4 States a woman is assaulted.

5 In Hawaii, we have thousands of children that are
6 abused. I deal with kids that have seen their baby
7 brothers being murdered in front of their eyes by their
8 parents, the very people that are supposed to be protecting
9 them, and here we cut moneys that are going to Child
10 Protective Services, we cut moneys that go to drug
11 prevention programs, and we cut moneys that go to domestic
12 shelters, domestic violence shelters.

13 We send out a message that guns are more important
14 than the protecting of our children, and while I understand
15 what happened in 9/11 was tragic and it did require some
16 kind of response, what is continuing going on is an outrage
17 because we are spending billions of dollars protecting oil
18 rights, putting money in politicians' pockets, and our
19 children are being murdered every day.

20 More women and children are murdered in the United
21 States than those that died in the World Trade Center.
22 More women and children. Our own women and children.

23 We want to talk about freedom. Women and children
24 across Hawaii and across the United States, they don't have
25 freedom. They're living in terror the next footstep down

1 the hall is someone that's going to be beating the
2 daylights out of them or smothering them while they sleep.
3 Our police here in Hawaii tell us, leave your cell phones
4 and your purses by your children so that you don't forget
5 them because our children have since -- long since become
6 important. Forget about them. Who cares. It doesn't --
7 they don't matter anymore.

8 We'd rather spend over \$150 billion protecting oil
9 rights than children shelters. Now, I'm not saying it's
10 your fault. We have a lot of those people up in the White
11 House, our Senator for one, who would rather put money in
12 his pocket than think about the children in Hawaii or think
13 about the children in the United States.

14 I can truthfully tell you this: United States is --
15 their fall isn't going to come from terrorists outside the
16 United States. If we keep killing our children and our
17 women, United States is going to fall from their own
18 people. You have more to fear from your neighbor than you
19 have to fear of some foreigner. Please think about that.

20 (Applause)

21 MR. CHANG: Next is Henry Ahlo followed by Maralyn
22 Kurshals and then Fred Dodge.

23 I want to thank you audience, too, for the respect
24 that you're showing the speakers. We appreciate that very
25 much.

1 MR. HENRY AHLO: Good evening and aloha. My name is
2 Henry Ahlo. I'm a lifetime resident of the Waianae coast,
3 and I too am a retired sergeant from the Army. I've served
4 here in Hawaii on many occasions, in Korea, in Vietnam, in
5 South America, and in the United States. I support the
6 military 100 percent.

7 Inasmuch as, at nine years old, when the war started,
8 beginning at Pearl Harbor, I had every opportunity to watch
9 the military come in and set up camps along the coast here
10 in Waianae, and they themselves, besides supporting
11 themselves, supported the community with protection, not
12 knowing whether we were going to be struck again by the
13 Japanese forces. Also, with food.

14 I come before you tonight and ask for your support,
15 that we support the military. Without the military in
16 Hawaii, that leaves us very vulnerable for any other forces
17 to come in.

18 I just returned from Korea on the 4th of October. I
19 stood across numerous communist people from North Korea and
20 China, and we had a stare down motion. We stared at them
21 and they stared at us. There were no gestures made. No
22 yelling across. Just silence. I wish many of you local
23 people here can witness that. The silence. But you can
24 tell that there was a peaceful setting there. We respected
25 them. They respected us.

1 At the same token, after the situation at hand, we
2 went to a place called Imjin Duk. It sits on the Imjin
3 River. One of our fellow people, a Korean war veteran,
4 laid a wreath there at the U.S. memorial. It made me think
5 how stressful it was for the people there, and the people
6 here in Hawaii to have all the freedom, all the pursuit of
7 happiness, free speech, a drugstore to go get food at.

8 I witnessed all this in South Korea. Believe me,
9 North Korea does not have this. The South Korean Embassy
10 in China closed down because it couldn't handle the influx
11 of North Koreans and Chinese flooding the embassy to get
12 amnesty in South Korea and the United States. United
13 States has opened their arms out only because the other
14 countries cannot afford the safeness of those people. They
15 want to come to the United States where they have freedom,
16 where they have a military force that protects them, and a
17 lot of us are the military force. The citizens of the
18 United States of Hawaii are the forces. The military was
19 not picked by special interest groups. They voluntarily
20 joined the forces.

21 The reason I came tonight also was to say I hear
22 about environmental impacts. Ride around the back roads to
23 Waianae, Maile, Nanakuli, Makaha, Makua, and you see what
24 impacts, we, the local people, cause to our own property.
25 Batteries along the highway, junk, automobiles being

1 burned, trash being dumped by our local citizens. I've
2 never seen one military person yet drop trash to the side
3 of the road.

4 UNIDENTIFIED SPEAKER: I have. I have. Plenty.

5 MR. HENRY AHLO: You are interrupting me, ma'am.

6 Kulikuli kou waha. Now. Maybe we ought to close this
7 already. Thank you for your time.

8 MR. CHANG: Do we need a recess or -- can we let him
9 finish?

10 UNIDENTIFIED SPEAKER: You not local.

11 MR. HENRY AHLO: The person back there talking about
12 local, I probably got more local than you. I don't need to
13 have interference from you. Let me make a closing
14 statement to this.

15 We are all citizens of the United States. I cannot
16 help but wonder what would happen if the military left here
17 because we wouldn't support them. I kind of wonder what
18 would happen if we only lived here as local people. Think
19 again. They support us. We support them. Thank you.

20 (Applause)

21 MR. CHANG: Maralyn Kurshals.

22 MS. MARALYN KURSHALS: Okay. Aloha. My name is
23 Maralyn Kurshals. I'm speaking tonight as a community
24 member of the Waianae coast, a mother of two children, and
25 a concerned pro-activist. My father served in the Navy as

1 a gunner in World War II, in both the South Pacific and in
2 Europe.

3 Tonight I say no to the Stryker Brigade. I do not
4 support the further expansion of the military occupation of
5 the nation of Hawaii. I cannot see the justification to
6 further exploit our precious natural resources, to increase
7 the killing of endangered species, to threaten the health
8 and well-being of our children, families, and elders all in
9 order to allow the U.S. Army to play with their toys of
10 death and destruction.

11 It does not take much intelligence to destroy. It
12 takes great intelligence to create, honor, and respect our
13 land and humanity. It takes intelligence to feed our
14 hungry children, to build homes for the homeless, to create
15 jobs for the unemployed, and put an end to the drug
16 epidemic in our community.

17 The Stryker Brigade is another unintelligent abuse of
18 our tax dollars and our natural and human resources. I do
19 not condone the instruments of death to practice on our
20 sacred home. I speak for those who cannot be here tonight,
21 the mothers of dead American soldiers who were told that
22 Saddam Hussein had nothing to do with attacks on 9/11, for
23 those who have died in brutal and senseless wars, for
24 military men and women who are committing suicide in Iraq,
25 and for Makua, whose flesh has been scorched black over and

1 over again by the incompetence and neglect of the U.S.

2 Army.

3 And you ask me to give you more land to desecrate so
4 that you can murder and maim more young people in illegal
5 and immoral wars? I say no to you. For humanity to
6 survive, we must put an end to the evil escalation of the
7 war machines. We must awaken to the truth. We can no
8 longer afford to kill and destroy each other in our home,
9 this planet earth.

10 The Iraqi war is wrong. The Stryker Brigade is
11 wrong. The only hope we have is to speak the truth, to
12 trust in God, and to stand together as one people in peace
13 and justice. I say no to the Stryker Brigade. Not here
14 and not anywhere. Thank you.

15 (Applause)

16 MR. CHANG: Thank you, Mrs. Kurshals. Next will be
17 Fred Dodge followed by Bud Ebel and then followed by
18 Shelley Zamborelli.

19 MR. FRED DODGE: Aloha kakou. This is one of the
20 three volumes that many of you got. One of three, heavy
21 bugger. And this DEIS, draft Environmental Impact
22 Statement is really incredibly huge and long.

23 When I met Colonel Anderson, as we were talking
24 outside, I jokingly said that I've read this thing three
25 times over, all three volumes. The military really

1 produces a lot of pollution. In fact, the military in
2 general, is the world's greatest polluter. The United
3 States is the largest military organization in the world.
4 We are the largest polluters, the military, in the United
5 States.

6 I remember when the present range officer at Makua
7 was giving a presentation to the troops, and he truthfully
8 said that in order to get them to realize that they have to
9 clean up their munitions and so on and the things that
10 they're trying to keep Makua better. It doesn't always
11 work, but the talk was good.

12 I feel that no action alternative -- there are three
13 possible actions. They want to bring this Stryker Brigade
14 here, get over 25,000 acres of new land, new land, right?
15 That -- you know, bring the Stryker Brigade, that's
16 alternative one, that's the preferred alternative in this
17 draft EIS.

18 And there's another alternative, which is a combed
19 down version of it where there would be a little bit less
20 land and not so much. And then the third alternative,
21 which apparently the NEPA law says you have to do is no
22 action. And, although this is mentioned several times in
23 this volume, it's really not given very much credence, and
24 I say that since it causes less pollution, less problems,
25 since we're going to need what they call a legacy force,

1 people -- everybody understand what a legacy force is?
2 It's what the present military is doing. They're going to
3 need what they're doing now. They're not going to give
4 this up for several years, perhaps, what, six, eight, ten
5 years down the line? Yeah. Maybe longer.
6 They're going to need that anyway, I say, because
7 Hawaii is such a small island, group of islands, our land
8 base is very little, it doesn't make sense to bring this
9 huge Stryker Brigade over here when we're not even sure
10 we're going to get it in the first place. You know,
11 they've assigned four Stryker Brigades all through the
12 country, and they withheld two more, Hawaii and
13 Pennsylvania, and it depends, in a way, on how the Stryker
14 Brigade does in Iraq. All we need is some rocket propelled
15 grenades to cause a lot of damage and/or deaths regarding
16 the Stryker Brigade, and it's very unlikely that it will
17 come to Hawaii.

18 But be that as it may, these are difficult times.
19 Most of us -- I know I work in the health field -- we're
20 asked to do less with less. We're asked to do more with
21 less actually. Except the military, they want more. I
22 would hope that because the islands are so small, that the
23 military would do more to let go of lands, give them up,
24 rather than acquire more.

25 I want to end with some health effects. When they

1 shoot their munitions, their artillery and mortars, they
2 use propellants. They call them cover bags, and then any
3 left over, they destroy on site or at least they're
4 supposed to. They're not supposed to take it back. And
5 according to this book, the -- once they burn these, the
6 residues, what they call the burn-pan residues, include,
7 among other things, led, DNT. It's an explosive, benzene
8 and cyanide. The latter are -- certainly cyanide is a
9 poison. Benzene is a known cancer causer.

10 So, my question is when they use these bags to send
11 these munitions out and they blow them up, aren't the same
12 residues in that mixture that goes out with the munitions?
13 I mean, you know, the propellants, they burn up there in
14 the guns, in order to propel those munitions out, don't
15 they have the same residues? And these are dangerous
16 residues and they're going to be using a lot of them.

17 Another one that's not mentioned, another toxin
18 that's not mentioned that's found in propellants is
19 perchlorate. You guys must be tired of me saying this
20 because I said it all over. Poor Ron is smiling.

21 You know, there's a lot of information out about
22 propellants. It's relatively new. This perchlorate causes
23 thyroid disease. I probably shouldn't do this, but how
24 many people in the room either have or know of family
25 members or friends that have some sort of thyroid disease?

1 A goodly number of hands. We have a lot of it here in
2 Hawaii. This really needs to be included in your EIS. You
3 need to do that. I keep pounding that issue and I hope
4 it's done.

5 One other thing is that there was on Page 3-82, I
6 shouldn't get that specific, but they refer to specific
7 details being found in Appendix N2. I'm sorry to do this
8 to you guys, but I have to, and then you go to Appendix N2
9 and it says refer to AR, which I guess is Army Regulations,
10 AR 210-21. Where is that? I mean, it's like they refer
11 you to one part, and that part refers you to something else
12 that's not in this book. And I would very much appreciate
13 if you would send me a copy of AR 210-21, please, so we can
14 check that out.

15 My feeling is that the Stryker Brigade is a poor
16 idea. There was an article in the Honolulu Advertiser in
17 October, this month, by William Cole, their military
18 writer, and basically I will summarize it to say that the
19 defense experts say that the Fort Lewis Strykers are going
20 to go to Iraq and so goes the rest of the program they
21 said.

22 And there's a lot of controversy over the Stryker
23 Brigade, even among the military. A lot of controversy.
24 It's not a definitely proven good thing. I know that
25 General Shinseki, he wants to have a more mobile, a light

1 force, and in a sense, looking ahead, that makes some sense
2 militarily, but there's a lot of controversy, and he quotes
3 a fellow by the name of Pike. He said, It's not going to
4 have -- "We're not going to have any heavy tanks anymore."
5 He said, "One option that the Pentagon may be considering
6 is skipping the last Stryker Brigades, that is the ones
7 going to Hawaii and Pennsylvania, and focusing on future
8 combat systems."

9 Anyway, he says here, "If the Strykers get shot up in
10 Iraq, they could be relegated to something less than a
11 front-line role."

12 So last but not least, maybe next to last, I'd like
13 to quote -- I know I've got to close up. I'm closing up.
14 One minute. Okay. It's perfect.

15 One of my favorite quotes is from former General and
16 President Dwight D. Eisenhower who said in 1963, "Every gun
17 that is made, every warship launched, every rocket fired
18 signifies in a final sense a theft from those who are not
19 fed, those who are cold, and are not clothed. The world in
20 arms is spending not money alone, it is spending the sweat
21 of its laborers, the genius of its scientists, and the
22 hopes of its children." Former President/General Dwight D.
23 Eisenhower.

24 In summary, you know these three volumes, they weigh
25 a lot, they're very long. I'd like to see anybody who's

1 actually read all three; however, as to their conclusions,
2 it's really not convincing, you know, because of
3 significant health effects. As a physician, I'm really
4 concerned about that, but also all the other things that
5 people have mentioned, the contamination, the dust, the
6 noise, the cultural effects, a whole list of things. I
7 would feel that they should have come to the conclusion
8 that no action is the best action.

9 Thank you very much. Aloha.

10 (Applause)

11 MR. CHANG: Thank you have much. After Bud Ebel is
12 Shelley Zamborelli and Sparky Rodrigues. If you guys can
13 hang in there, we'll plan to take a break in about 15
14 minutes.

15 MR. BUD EBEL: My name is Bud Ebel. I'm here to
16 support the Stryker Brigade in Hawaii. It's necessary for
17 the Army to protect its troops, to mobilize rapidly, and to
18 arm them effectively.

19 Right now, you got a tank, which is a marvelous
20 weapon in war. The foot soldier, he's got a modern
21 bulletproof vest. That's a wonderful thing. It is a
22 wonderful thing, but a Stryker Brigade can bring soldiers
23 to the battle in a much safer vehicle and in a much more
24 efficient manner and with much more speed and fire power.
25 It is important to the safety of the soldiers. It is

1 important that the American Army remain the strongest and
2 it isn't going to happen wishin' it wasn't going to be
3 inconvenient.

4 There is inconvenience. There's huge costs. If the
5 Army didn't defeat Germany and Japan, Hawaii would be
6 Japanese. Can't help that. It's what would have happened,
7 but we did defeat them. We had a major war for about 50
8 years called the cold war, and thankfully, we're not
9 communists. You have the ability to do what you wish in
10 your free life.

11 We have another erratic situation now where we have
12 all kinds of crazy people in the world who are just raising
13 hell with bombs and setting oil fields on fire, maybe 500
14 wells at a crack. Talk about pollution. We've got to keep
15 our guard up. We've got to thank the Army for the
16 marvelous job they are doing and have done, and I think we
17 have to support them.

18 There was one thing I said in the record before, and
19 I want to make an addendum to it, and this will be in the
20 record. Last year on Oahu there were 599 brush fires.
21 Emphasize the word "brush." This year so far on Oahu there
22 are 989 brush fires, one of which was Makua. Everybody is
23 hollering like hell about Makua, but there were still 988
24 others that were burning the heck of a lot of stuff. Fires
25 are a problem.

1 And I'm going to leave one thought, if I may. When
2 this redevelopment comes, think in terms of fires that
3 might be set by terrorists. You can't prevent that. Think
4 in terms of fires that might be set by wackos, and that's
5 really tough to prevent. What I'm asking you for is a
6 redoubled effort to have machinery, water supplies,
7 helicopters, whatever's necessary, but whatever you think
8 is adequate now for fire prevention -- for fire handling,
9 putting out fires, maybe that's about half of what you
10 need, and maybe that's something the city and county is
11 going to have -- and the State is going to have to think
12 about. We have a wonderful fire protection service. We've
13 got the best trucks in the world, but maybe they're not
14 enough.

15 And I'm looking at this thing in California, and I
16 got to wonder, I don't know where that's coming from, but
17 I've never seen 25 fires in a 500-mile area. I've never
18 seen that in any part of this country. That's something
19 that's speculation and no place here, but it is a thought.
20 You've been struck by terrorists. You will be struck again
21 by terrorists. And I'll fight 'em, but it ain't going to
22 do much good. I've got to have an Army, and I have got to
23 have a police force and I've got to have a fire department.

24 And I appreciate what you're doing and I ask you to
25 continue to do it, and I thank and offer my gratitude to

1 every member of the military. I am not a member of the
2 military. I was for a short time as a young man. I did
3 not retire from the military. A lot -- you know, it's a
4 good thing to be retired from the military, I don't mean it
5 that way, but I'm speaking pro military as an American
6 citizen.

7 I think that's about it, gentlemen. And I thank you
8 for holding the meetings. I appreciate your giving us the
9 opportunity, and I hope some of this animosity in our
10 community can chill out. It's boiling, and it's going to
11 spill over into the community. It has already in some
12 cases. I'd ask you for your tolerance and your aloha, and
13 I thank you for the moment.

14 (Applause)

15 MR. CHANG: Thank you, Mr. Ebel. Next is Shelley
16 Zamborelli, and actually, I think we've been going quite a
17 while, so why don't we take a break after Shelley. Please.

18 MS. SHELLEY ZAMBORELLI: Several months ago, I think
19 there's probably quite a few people that are in this room
20 now, we were invited to come up on a Sunday morning to
21 Makua. While people up there were trying to convince us
22 what a wonderful thing the fire was, how it opened
23 everything up, just -- you know, how stupid were we going
24 to be to believe that, that this fire was a wonderful
25 thing?

1 So a little personal story, I got home and out in my
2 yard was a pueo sitting there and he was like this
3 (indicating) with his wings out and everything. And it
4 just kind of touched me, and I said to him, well, what are
5 you doing here? And he said, well, you people just burned
6 down my home. And I said, well, you're welcome to be in my
7 place any time. I have trees and stuff.

8 So, now I guess I can take this home. I can put it
9 out in the yard and tell him read this. It will explain
10 why we want to get rid of all you guys, all your relatives,
11 all your trees, plants that have been here before people,
12 any people, haoles, Polynesians.

13 To me it's just a real sad thing. And do I need to
14 go look at pictures and read three of these to come to the
15 conclusion that we're going to be taking sensitive areas,
16 making them into a place where these tanks can go around.
17 All the tanks I see are in the desert, so is the idea to
18 make Hawaii into a desert? Is -- I don't know. It's
19 wrong.

20 You know, Dr. Dodge is here quoting presidents and
21 stuff and I'm talking to an owl, but it's just wrong doing
22 this, and I would like to say that the speakers that come
23 up here and say the military is doing a good thing here, a
24 good thing at Makua, please explain it.

25 And another thing I'm very, very tired of is when

1 somebody comes up here and says why should we protect the
2 environment when we walk down the street we see batteries,
3 burned out cars? Well, plenty of us that are here, I'm
4 sure, have picked up trash by the side of the road. Maybe
5 we need to punish the people that are putting it there.
6 I'm sure it's not everybody in the community. It's a very,
7 very small percentage. But what is it -- I'm just sick of
8 hearing about burned cars, batteries, and trash as opposed
9 to running tanks, taking 1,400 more acres of Oahu and
10 destroying it. I don't need a report like this to tell me
11 what it's going to do.

12 Thank you.

13 (Applause)

14 MR. CHANG: Thank you very much. Okay. Thank you
15 all again for the respect and aloha you're showing
16 everyone. We really appreciate that a lot. It's time to
17 take a stretch break. The luas are across the building to
18 this side of us, and then there's coffee and water and
19 stuff, so why don't we take about ten minutes, okay? And
20 then we'll resume in ten minutes.

21 (A break was taken from 8:05 p.m. to 8:25 p.m., and
22 further proceedings were had on the following page.)

23

24

25

1 MR. CHANG: First of all, I want to say
2 good evening and express our appreciation for the respect
3 you're showing for the speakers and the aloha you've
4 demonstrated.

5 Much is being expressed and we want to make
6 sure everybody has a chance who wishes to do so to express
7 what they feel must be said.

8 To remind you, there is an opportunity if
9 you do not want to come to the podium to present
10 testimony, that a court reporter is in the corner behind
11 the sign-up desk that will take your private testimony, if
12 you wish to submit it that way. That's in the corner
13 behind the sign-in desk.

14 And if you wish to be added to the list you
15 can still do so. So if you want to provide testimony,
16 just go to the sign-up table and indicate you want to do
17 so and you can.

18 Reminding people again that we're going to
19 try to stay with the five minute limit as much as we can
20 to try to allow everybody to have a chance to speak who
21 wants to speak. Again, appreciate your cooperation with
22 that when you do speak.

23 So are we guys ready? Very good. Okay.
24 So we will start with Sparky Rodrigues, then followed with
25 Alice Greenwood and Patricia Patterson. Okay.

1 MR. SPARKY RODRIGUES: Aloha. I'm Sparky
2 Rodrigues.

3 AUDIENCE: Aloha.

4 MR. SPARKY RODRIGUES: I'm a member of
5 Malama Makua, but also a board member for the national
6 organization, Military Toxic Projects. One of the things
7 that this Stryker Brigade is part of the Army
8 transformation and eventually they're looking into going
9 to unmanned weapons systems which make these Strykers
10 already obsolete.

11 I believe that these Strykers aren't
12 initially designed for communities like us that are armed
13 with signs, sometimes cameras and they would not
14 survive -- I don't believe they would survive in an Iraqi
15 type environment with the rocket propelled grenade
16 launchers.

17 So if you got a .45 or rifle you have might
18 have a chance of surviving in a Stryker if the community
19 did an uprising, but right now we have signs as our
20 weapons. And I don't believe the Strykers are appropriate
21 for here.

22 If as much money is being spent on these
23 Strykers as needs be, was spent on peace or education I
24 believe we would have a more peaceful community and a
25 peaceful nation. (Applause).

1 One of the things the Army has said is that
2 we're encroaching on their training and on the militarism
3 that they're needing to do for their troop readiness.
4 They're using the shroud of patriotism so that they can go
5 ahead and carry on these things that offer no benefit to
6 our community, no benefit to the environment and no
7 benefit for our future.

8 Last month it was to expand radar. We're
9 within the impact zone of that. Before that was the Star
10 Wars.

11 The cumulative impacts of militarism here
12 on the Waianae Coast is huge. One of the words that's in
13 this 3-book document on the EIS is fugitive dust. This is
14 the dust created by the wheels going through the training
15 area.

16 I'm a down-winder so I get to breathe all
17 this stuff that gets to come over the Waianae Range. It
18 comes right into my bedroom because that's the direction
19 my room, my bedroom is facing, Schofield.

20 There's no indication that they're going to
21 do any air quality sampling, testing on an ongoing basis.
22 They've been training there for 70 years. The first
23 bullet they fired is still there. Same as Makua.

24 One of the things that happened with the
25 fire that went out of control in Makua, the intention was

1 to burn within the fire break road. Got out of control.

2 Burned everything outside the fire break road.

3 The burn plan, the fire plan was inadequate
4 as it is with the Stryker plan. The damage to endangered
5 species, they said. "Well it's only a few endangered
6 species. Even though they may be on the verge of
7 extinction they may be found elsewhere."

8 I believe that this plan will end up moving
9 us people closer to extinction, especially those on the
10 Waianae Coast. Some of the contaminants change us
11 genetically.

12 I'm a military vet from Vietnam. We were
13 those that went over to fight for the peace. Our
14 community is not at peace here. We're being terrorized by
15 the military's presence, by their constant using little
16 square boxes to do more.

17 These half measures have been going on for
18 a long, long time. And we've got the patriotic guys that
19 support this. But it's my children, their reproduction,
20 the generations to come that will pay.

21 You guys will rotate out of here, those on
22 active duty. You don't get to breathe and drink the water
23 that you leave behind. What's even more outrageous, at
24 the same time we're doing this, in the Pentagon they're
25 lobbying the Congress to get broad exemptions for air

1 quality, for water quality so we can do this kind of
2 training with impunity. And we wouldn't even be here if
3 they had that legislation passed.

4 My question is how does the benefits of
5 this Stryker Brigade benefit our youth, our health, our
6 education, our environment, our people? I don't think it
7 does. Don't do it. Don't bring it here. (Applause)

8 MR. CHANG: Thank you, Mr. Rodrigues.
9 Alice Greenwood is next. Patricia Patterson to follow.
10 Kawika Liu after that.

11 MS. ALICE GREENWOOD: Aloha. My name is
12 Alice Greenwood. I'm from the Waianae Coast.

13 AUDIENCE: Aloha.

14 MS. ALICE GREENWOOD: My husband, which
15 I've always brought up every time we have had meetings,
16 was a staunch marine. What I mean by that was when it
17 came to his country he loved his country no matter what.
18 But he always told me, "Mom, when it comes to my homeland
19 I'll give up my title as a marine.

20 And I always wonder why he made that
21 statement. "I'll fight in the enemy land but I'll never
22 fight home." Now I know what he means. The enemy is in
23 here. They're bringing the tanks and they're destroying
24 the environment.

25 I remember when they was doing the

1 Kaho'olawe and my daughter and grandchildren would come to
2 visit, they would have ringworms all over them. We was
3 wondering why. They found out it was part of the
4 contamination when they were bombing Kaho'olawe. And I he
5 told me, "I would give up my title as a marine when it
6 affects my home."

7 You know, if he was alive today he would be
8 the one standing here telling me to, "Press on. Don't let
9 them do it. Don't give up your land." And you know what?
10 Another thing I remember him -- and as I was sitting there
11 I remember him telling me one thing. "I went to fight a
12 war to decrease the population. That's all." Decrease
13 our population.

14 You know, the biggest thing that I see
15 about my culture, yeah, is that Hawai'i is one and only.
16 We let things get away. There goes Hawai'i. There's no
17 Hawai'i.

18 Just think if we let the military take
19 over -- and yet everybody says oh, if it wasn't for the
20 military we would be taken over by the Japanese, by the
21 Russians, by everybody else.

22 But you know something? Why do we have to
23 have that type of sense that in order for us to have peace
24 there's no other way but to fight? And that's the only
25 way we can have peace is to fight, is to decrease the

1 population?

2 We have our mens not around us. We as
3 women have to raise our children, our grandchildren
4 because we have to decrease the population so other people
5 can live. That's the honest truth.

6 We look at other people suffering and
7 everything. We criticize them. We say, "Oh, in Hawai'i,
8 in Makaha that's wasted land. That land can never be
9 used." You know what? Go home.

10 Watch homes across America. I watch them
11 build beautiful mansions on nothing but contaminated lands
12 and all these kind. Yet everybody said that's no good
13 lands? We don't need any more. Hawai'i is too small.
14 We're overpopulated. Why bring in tanks? Why bring in
15 military? We can't even handle our traffic conditions,
16 our housing conditions.

17 Everybody said it wasn't for the military
18 we'll never have any opportunity to be a millionaire
19 because it wasn't for them we work, they gave us a lot of
20 money, everything else. Yeah?

21 Can we afford to buy the land that we have?
22 No, we can't. We can't afford to buy any of those things.
23 You know why? Because look out there. They're only
24 offering us 20-hours-a-week jobs.

25 Hey, wise up already. Stop this. It's

1 about time we start fighting, fighting for the 40 hours,
2 fighting for the medical. If they were terrific how come
3 we have all these kind problems? If they were so
4 terrific, they were part of our economy like the sugar
5 cane company, like the pineapple company -- if they were
6 so terrific why are we suffering today?

7 They're not here to bring us anything.
8 They're more here to take away, take away our dignity,
9 take away our land, take away our children. It's about
10 time we wake up and said, "No more."

11 Let's learn to negotiate and talk. And if
12 we can't talk, you know what? Then we need to somehow
13 compromise in helping each and every one of us as people.
14 The world needs to do it. We need someone powerful enough
15 to do that, to join hands across the world.

16 I thank you very much. (Applause)

17 MR. CHANG: Thank you, Ms. Greenwood. Next
18 is Patricia Patterson, Kawika Liu and then Melva Aila.

19 MS. PATRICIA PATTERSON: I began reading
20 those three volumes with a preface. I see there's going
21 to be 120 millimeter mortars versus the 80 millimeter they
22 used at Makua. Are these mortars new? Just we have never
23 used them here before? Where else do they use them? Do
24 you know? Lots of places? Are they as bad and as loud as
25 The Bangalore? Some of the people here know me as The

1 Bangalore lady. I'm not going to do that tonight.

2 We had been given 45 days to read and
3 absorb what the "Star Bulletin" says was 1500 pages. I
4 didn't count them. And Frenchy said it was 50 pounds. I
5 know that in the backpack I have to use, now that I hurt
6 my foot, I can only carry one volume at a time.

7 So I looked at parts of two of them. You
8 know, it's like you have three Draft Environmental
9 Assessments for Makua Valley plus the still awaited Final
10 EIS all delivered at once. Too much, too much. So I'm
11 asking if you would please extend the time for us to
12 respond to 90 days. Thank you.

13 I do want to thank you for one thing. You
14 put the 10 and a quarter pages of acronyms in the front of
15 the first document. That helped a lot. (Laughter)

16 Page 5, 180 describes some ATIs as
17 including a rock or two. That is insulting. You may
18 remember, quoting William Aila, Jr., "It's not just a
19 rock." It can be a very sacred place.

20 So even if there are only a couple of rocks
21 there, respect them. All ATI's -- that's an acronym that
22 we need to remember: Areas of Traditional Importance,
23 even quote, "A natural place with only a rock or two."

24 On page ES5 "Makua Valley will not be
25 included in these volumes." But Makua Valley should be a

1 part of this EIS since you admit that you, quote "may use"

2 Makua for the Stryker Brigade combat team training.

3 Let me make another point here. Marion

4 Kelly prepared a two-part report on the cultural history

5 of Makua Valley. Here's half of it.

6 You still have not published this cultural

7 history of Makua Valley, and I'm asking that you do

8 publish it in a hard cover copy for general distribution.

9 (Applause)

10 In this current EIS you quote many authors'

11 versions of ancient Hawaiian uses of Waianae Uka and the

12 Central O'ahu plateau. It's been very good to see all

13 this information brought from here, there, everywhere and

14 put down in one place. I thank you for that. I ask you,

15 again, to publish the cultural information in a hardback

16 copy for general distribution.

17 Table ES17 on page ES43 anticipates, quote,

18 "Less than significant impacts on undiscovered sites," end

19 quote. How can you make that declaration when those

20 19-ton Stryker vehicles filled with 14 soldiers plus their

21 equipment and some of them with the gun on top will go

22 roaring over the land? I don't think that would probably

23 be somewhat less than significant impact.

24 You know, though, on the other hand, I can

25 see the advantage for those soldiers in having a safe

1 place to return to, the Stryker, after engagement with the
2 enemy, whoever that's going to be, and of the
3 communications within that Stryker with their commander
4 and with other people who are out there fighting. So I
5 see some good.

6 But I don't see the advantage of training
7 here on O'ahu, the advantage for us. You take over more
8 of our land. You bring in at least how many more people,
9 the 350 with their families to this already overdeveloped
10 island?

11 These people won't shop in our mom and pop
12 stores, but in, of course, the base PXs and commissaries,
13 especially that beautiful gigantic complex at Pearl Harbor
14 where we're not allowed to buy.

15 Our already crowded roads will have to
16 accommodate more cars. You're building new roads in
17 Kahuku and on the Big Island. But you never built us a
18 secondary road, even though your trucks, your troop
19 carriers have, for a long time, and continue to use our
20 one in and out highway to Makua and Kolekole Pass which we
21 can't use either.

22 It would be nice if you would help us with
23 our need for a second access road into our community.

24 You have proved yourselves that Pohakuloa
25 is not an appropriate place to train soldiers to fight in

1 the Pacific Rim if you have to bulldoze lava, rocks and
2 hard soil to soften the substrate on which to train
3 soldiers to fight. Where? Where is similar terrain found
4 in this Pacific Rim that you're going to need to go to?
5 I will end where you do. Quoting, "Wild
6 fire is the single largest impact made by military
7 activities in the Hawaiian ecosystem." And yet your
8 detailed voluminous Wild Land Fire Management Plan doesn't
9 work.

10 The last Makua Valley fire burned over
11 1,200 acres after the Wild Land Fire Management Plan was
12 in place. What do you say to that? It's sad. Thank you.
13 (Applause)

14 DR. KAWIKA LIU: Aloha kakou. (Speaking in
15 Hawaiian.) I'll continue in English. But, I speak from
16 several perspectives. The first perspective is from a
17 future father.

18 I don't want to have my child face the
19 shame and humiliation of further watching the forces of
20 occupation on her or his one hanau every day seeing those
21 military helicopters, seeing those military vehicles,
22 seeing the armed forces at a time when she or he has so
23 little left of her or his birthright.

24 I would speak also as a resident physician
25 right now at Kapiolani Hospital and seeing every day the

1 impact of pollution, the horrendously high rates of asthma
2 and other respiratory disease we have in our keiki, not
3 only Hawaiians, other Pacific Islanders, even the poe
4 Haole. Everyone suffers from this impact.

5 You cannot tell me the disproportionate
6 impact of asthma and other respiratory diseases is not
7 somehow linked to the pollution. We know the most
8 polluted states in the occupied United States are here in
9 Hawai'i, Pearl Harbor, other places on O'ahu such as
10 Waikane. The military's broken promise, broken contract.

11 I speak as someone who is vaguely familiar
12 with military things and looks at the Stryker, which has
13 only armor, just 12.7 millimeter rounds, and what is
14 happening in Iraq and similar vehicles. They're being hit
15 by RPG's, by rocket-propelled grenades, and destroyed.

16 Then the Army says we're going to -- the
17 whole momentum behind the Strykers have it deployed by
18 air.

19 But then they're going to have armor which
20 will make them no longer be able to be deployed by air
21 just to meet these threats which they are finding.

22 I say it's a lie. I would just end by
23 saying if this Stryker Brigade is very necessary then I
24 would suggest they find a ranch in Texas which is owned by
25 the president and deploy it there. Mahalo. (Applause,

1 whistles).

2 MR. CHANG: Melva Aila next, Kyle Kajihiro
3 and Coochie Cayan.

4 MS. MELVA AILA: Aloha. My name is Melva
5 Aila and I'm a Hawaiian. I lived in Waianae all my life.
6 I reside in the 'ahupua'a of Lualualei. I'm strongly
7 against the transformation and the Stryker Brigade.

8 But I've lost my focus on this issue after
9 seeing for the past two days people getting arrested, And
10 the Army and the news media saying protestors were
11 arrested.

12 We are not protestors. We are people who
13 are invited to a public hearing to participate in the
14 process and they were arrested. Shame on you.

15 Labeling and stereotyping people who enter
16 a meeting with a sign as a protestor. I attended the
17 last, the meeting last night. There was no confrontation
18 between the people who were trying to get into the meeting
19 room. The guards were in the way and preventing access
20 into the meeting.

21 I attended many Neighborhood Board
22 meetings, and many people carry in signs. They were not
23 labeled as protestors. We are not protestors. We're
24 trying to participate in a public process.

25 We can use signs as a presentation. You

1 do. I am truly upset. And the focus of this meeting has
2 been lost through the arrogance of the Army and their
3 power trip and attitude.

4 We have had many, many scoping meetings and
5 public hearings where over 600 people have attended. And
6 we did not need one police officer at that meeting.

7 We sign waived in front of the district
8 park. We walked in the building with our signs and it was
9 no problem. Everybody -- everything went smoothly.

10 I don't know who gave the authorization to
11 arrest anyone with signs, but they should apologize to
12 these people. They arrested these people and they should
13 reimburse them for their money spent on their bail.

14 (Applause)

15 We are not protestors. We're people who
16 just wanted to participate in the public hearing process.
17 We were invited. Those arrests should never have occurred
18 and it was uncalled for.

19 Shame on you. You silenced those people
20 who wanted to testify by arresting them. All they wanted
21 to do was participate in the process.

22 That is what I mean when I said the focus
23 was lost. I took up enough of your time and there's
24 others who want to share. But I just wanted to add the
25 comment period is too short. And it should be extended to

1 at least 90 days or more. Stop polluting. Enough
2 already. Clean up existing ranges and leave. You only
3 make us a bigger target for the terrorists. (Applause).

4 MR. CHANG: Thank you, Ms. Aila. Kyle
5 Kajihiro next, Coochie Cayan and Gail Hunter.

6 MR. KYLE KAJIHIRO: Aloha. Gee, took me
7 three days but I finally made it up here. (Applause,
8 whistling). You know what? The fact that I'm here, the
9 fact that all of you are here holding your signs,
10 expressing yourselves is a victory for us, for the people.

11 I want to salute all of you. It's a
12 victory for all of us. You don't fight for freedom? Guns
13 don't give you freedom. You have to practice it. So
14 that's what we was doing. (Applause).

15 This gets to the process. I think this
16 whole process has been a farce. I think you need to go
17 back to the drawing board. I was going to say extend the
18 timeline, but no, I think you need to redo this whole
19 thing.

20 Senator Inouye was quoted in the newspaper
21 a few months ago saying that this was a done deal, "I have
22 received assurances that the Stryker Brigade will come to
23 Hawai'i."

24 That tells me this process is just a show.
25 So why are we here wasting our time? We have to come

1 here. We have to show our good intentions, our resistance
2 because we do not allow this stuff to happen. We will not
3 allow this to happen. But this invalidates your whole
4 process and we will continue to challenge this.

5 The arrest that took place on Tuesday
6 night, four of us were there; the arrest that took place
7 last night three were arrested, not only was it an
8 inconvenience -- but I didn't mind that Because you know
9 what?

10 It's always right to stand up for justice.
11 It's always right to struggle for freedom and I will
12 continue to do it again. And I think more will join me if
13 we did it again. (Applause).

14 You know what's a shame? We would have had
15 this room full. But I think what people saw was
16 intimidating. It was an act of terrorism that kept people
17 away from this process.

18 So you guys supposed to have public
19 participation, but there was none because it was
20 anti-participation what took place, you know.

21 Are you folks okay? You feeling all right?
22 Because, you know, I have my weapons of mass destruction
23 here. (Holding up signs) You know. Kind of dangerous
24 getting information.

25 So, you know, just scrap the whole thing

1 and start again. Someone earlier mentioned about the
2 conflict and not wanting to have pilikia.

3 The conflict doesn't come from, like, us
4 having to be rude to each other. We don't have to be rude
5 to each other. I don't want to be rude to anybody, even
6 if we disagree.

7 The conflict goes much, much deeper, what
8 we talking about here. I think the arrest that took place
9 was symptomatic of that deeper conflict, of that more
10 fundamental violation that took place here in Hawai'i and
11 that continues to take place, this occupation that people
12 are talking about, this invasion that people have talked
13 about.

14 You have a requirement if your EIS to
15 consider environmental justice. The concept of justice is
16 not about punishment. Justice has to go much deeper. You
17 have to go to the source of the hurt of the violation.
18 You have to make it right. That's the only way the thing
19 will heal.

20 So we call it restorative justice. In the
21 case of Hawai'i, a big violation took place and it started
22 when -- started which General Schofield came to Hawai'i
23 and conducted espionage on behalf of the United States of
24 America on the Kingdom of Hawai'i. And they scouted out
25 what was Waimomi or Kewala or Pu'uloa. And they decided

1 that was the key to controlling the whole Pacific. The
2 empire building was already underway and plans were being
3 laid.

4 It continues in 1893 when armed invasion
5 took place, when the queen was deposed with U.S. guns,
6 U.S. troops, U.S. conspiracies.

7 1898 the U.S. goes to war with Spain and
8 now they take the whole thing. This is after the Hawaiian
9 people defeated two attempts at annexation. The hui
10 petitions are testimony to that. There was never a treaty
11 that transferred sovereignty. Others have spoke about
12 this.

13 Right now the military controls around
14 56 percent of your land, is what you call ceded lands.
15 They're actually occupied national lands of the Hawaiian
16 nation. You're not paying anything for those lands. I'd
17 like your EIS to reflect that analysis because I think
18 that section that covered that history was very
19 inadequate. It didn't cover those issues. I think the
20 U.S. Constitution says you cannot annex independent
21 territories without an independent treaty.

22 So tell us how you have jurisdiction over
23 these lands? And exactly how much of those occupied
24 national lands will be impacted by the Stryker expansion,
25 and what will be the fair market value for the use of

1 those lands if you had added it up from the time it was
2 illegally taken over?

3 Because I think that should be compensated
4 to the Hawaiian people. Then we wouldn't have to be
5 begging for money from Congress for native Hawaiian
6 programs.

7 I want to talk a little bit about the
8 Stryker as a boondoggle. Is William Aila here?

9 MR. WILLIAM AILA: I'll hold the sign.

10 MR. KYLE KAJIHIRO: You can be my
11 assistant. One of the things that allowed the military
12 experts are criticizing the Stryker is that it's a
13 boondoggle. It's a lemon. It's a death trap. The
14 armor's too thin.

15 It doesn't fit in the plane. You got to
16 flat the tires so it can roll in. If you put armor on
17 it's too heavy to fly.

18 So you got to go, for a rational person why
19 are they pushing this thing? You got to follow the money
20 to figure that out. What happens here the Senate Defense
21 Appropriation Subcommittee, the two ranking members,
22 Senator Inouye representing Hawai'i and Senator Stevens
23 representing Alaska are the ones that appropriate the
24 money.

25 Then Senator Inouye's buddy, General

1 Shinseki from Kauai, another local boy, is head of the
2 Army at the time. He's the one who creates this plan and
3 pushes it forward despite a lot of criticism from his own
4 troops, his own officers.

5 His subordinate, General Hibner, retires
6 from the Army after setting up the deal with General
7 Dynamics and then takes a lucrative job with General
8 Dynamics who is the manufacturer of the Stryker. Then you
9 have the Strykers being assigned nicely to Alaska and
10 Hawai'i, among the other six.

11 So the question, you know, arises is what
12 is the relationship between General Hibner and General
13 Shinseki and how did that relationship affect the decision
14 to station the Stryker Brigade here.

15 Because if the military guys don't want
16 it, if the people here don't want it, then why is it being
17 pushed to vehemently and imposed upon us?

18 And I also want to know if it's not true
19 that the commander of one of the Stryker battle games that
20 took place -- I heard this story that he quit in
21 frustration because the exercise was rigged in favor of
22 the Stryker team winning.

23 So can you address that, please. I don't
24 see any analysis about these criticisms of the system
25 itself in your EIS.

1 Also one criteria for the Stryker Brigade
2 is that it's transportable in the C-130 aircraft. Other
3 reports have come out says it's not, it doesn't fit, it's
4 not doable. The GAO says it's not deployable within 96
5 hours.

6 And I'm not arguing for a better killing
7 machine. But what I'm pointing to with this is to say
8 there are other forces at work that are pushing this
9 forward. And that needs to be part of the analysis. When
10 you say purpose and need, that needs to reflect these
11 other forces. Because I think that would be the honest
12 thing to do.

13 The other thing about the need argument --
14 oh, thanks -- other people have said the Stryker is about
15 defense. I'll finish when I'm ready. I've been waiting
16 three days. I have to say a lot.

17 The Stryker -- they say the Stryker is
18 about defense. But how is that going to defend us here?
19 I don't understand that.

20 How is 300 big tanks roaming around
21 defending us and making us more secure? A Stryker is
22 meant to deploy to other places. It's an invasive,
23 aggressive weapon. It's about attack. So then that tells
24 me that we become complicit and, therefore, a threat to
25 other people who feel threatened by this system being in

1 Hawai'i.

2 How does that raise the level of threat for
3 Hawai'i in your strategic analysis? How does the enormous
4 military presence increase the level of what they call
5 target rich environment for Hawai'i? Give us some
6 analysis about that.

7 Another contradiction I want to point out.
8 In 1990 there was a Department of Defense memorandum that
9 set a moratorium on new land acquisitions for training.
10 So no new land for training were supposed to be acquired
11 by the military. Yet the Army is expanding here. I don't
12 understand this. This is a big contradiction to me.

13 The other thing that's a contradiction is
14 that the land use requirement study that was done by the
15 Army in 1997 states that there is a shortfall of 70,000
16 acres of land for training. So does that mean that this
17 25,000 acres is an installment of 70,000 acres that's
18 going to be acquired in the future?

19 What is the real -- what's really being
20 projected here? Those plans are not made clear.

21 Since 1978 this Stryker Brigade expansion
22 will increase the rate of loss of agricultural land. So
23 from 1978 to today the rate of loss of agricultural lands
24 was 1 percent. This Stryker Brigade will bring that up to
25 2.7 percent, roughly, loss of lands.

1 Therefore, how much productive capacity
2 will be lost? What is the value of that loss? How much
3 revenue will be lost? How much of this land will be lost
4 forever?

5 One thing I like about reading these EISs
6 is that every once in a while I find little nuggets of
7 information that are kind of interesting and revealing.
8 You folks finally did a study of the soil and groundwater
9 contamination. A little limited part of it but it was
10 very revealing. Because four toxics components of
11 explosives were discovered: DNT, RDX, HMX, nitroglycerine,
12 plus high levels of arsenic, high levels of lead.

13 So I don't understand how you can just do
14 that spot sample and then say that these are acceptable
15 risks when you haven't sampled over a period of time to
16 understand the behavior of these substances in the
17 environment as these weather conditions fluctuate, as our
18 environmental conditions fluctuate.

19 In Makua we are having to do environmental
20 studies for at least a year to understand how the water
21 moves, how the soil moves. And you haven't done that yet.
22 So I think that that invalidates the science or at least
23 says it's inadequate.

24 There's no sampling off-range. And there's
25 no sampling of the Pohakuloa impact range. And I want to

1 understand why that is and if you're planning to do more.

2 What are the rates of
3 environmentally-induced diseases in these affected areas?
4 If there are contaminants, let's go the next step and
5 figure out how it's affecting people.

6 Have there any toxicology studies been done
7 in the community? Are there any plans to treat folks if
8 there are illnesses?

9 As Dr. Dodge mentioned there's a lot of
10 diabetes and thyroid-related diseases. Perchlorate
11 affects the thyroid. So why haven't there been studies of
12 perchlorate?

13 They just came out with big article in the
14 "Seattle Post Intelligence" newspaper about the debate
15 over perchlorate.

16 They find lettuce in California with
17 perchlorate contamination, milk in Texas with perchlorate.
18 I'm assuming we use a lot of it in Hawai'i because of the
19 rockets and the munitions. So why isn't that part of
20 concern?

21 Then, you know, the lead -- we were told
22 before, the lead is bound up in these bullets. Even if it
23 goes in the ground it stays there. I can't believe this
24 stuff doesn't eventually dissolve in solution and get out
25 into the environment and pose a threat.

1 So, you know, please explain what the rate
2 of the release of this material in the environment is and
3 the quantity of lead that's already released. How many
4 tons are in the environment?

5 What's happening to that? What the
6 behavior of these chemicals over time? Is it showing up
7 in people's bodies in our communities? We want to know.
8 This is our community. This is my -- our kids and their
9 grandkids that's at stake.

10 I'm going to just cut it short. But what
11 is the estimated cost of cleaning up the mess that the
12 Army has made over the years? This is also getting into
13 the cumulative impacts.

14 Because, you know, it often talks about the
15 benefits of the money coming in. Usually that's only the
16 appropriations that get reflected in the press releases of
17 those Congressmen's office or the DBEDT reports. But no
18 analyses have been done of what the actual costs are of
19 these developments and what actually leaks out of the
20 economy.

21 So I think those need to be part of this
22 analysis. If you're going to argue that the economy is
23 better off because of the money coming in, then we need to
24 show real costs. Kaho'olawe \$400 million. One-tenth of
25 that island is safe. They have failed in the cleanup.

1 Pohakuloa is three times the size of
2 Kaho'olawe. You're proposing to add almost the equivalent
3 area of another Kaho'olawe to your land holdings.
4 Therefore, what is it going to cost to clean this up after
5 60 years or more of drain?

6 And then the issue of the dust. I think it
7 was like 3500-tons of dust more per year will be kicked
8 up? So, like, where does that go?

9 How is this affecting people with
10 respiratory ailments? How is it affecting our reef
11 settlement downstream? I didn't see a very good analysis
12 of that.

13 Finally, on the culture issue. I'm not
14 going to go into the specifics. I think it's a concept
15 thing. It's a paradigm thing. What I hear all the time
16 at these meetings is aloha 'aina is incompatible with what
17 you're doing on this land.

18 So you have to stop 'cause it's threatening
19 the survival of our people and their practices and their
20 culture. It's threatening our survival physically,
21 psychologically, socially.

22 I think the thing the Army could do is
23 start cleaning up, start investing in that. A
24 \$2.8 million Stryker would go a long way towards some
25 beach cleanups and restoration.

1 If we spread that out, 300 of those, we
2 could employ a lot of people. So the economic benefit
3 could still come here, but it could be productive. Yeah?
4 So put those options into your study, please, because I
5 think that's the stuff the community wants to talk about.

6 Then just finally the --

7 MR. CHANG: Excuse me for interrupting you.
8 In about two minutes we need to take a technology time
9 break to change videotape.

10 MR. KYLE KAJIHIRO: Okay. I will be pau
11 before then. You guys are supposed to study alternatives
12 but I didn't see any of that in there. You just said
13 Hawai'i -- the requirement was that a brigade was
14 stationed in Hawai'i, and, therefore, you did your study
15 around that.

16 I don't see somewhere in the programmatic
17 environmental statement where they analyze different
18 alternatives and compares cost, anything in there. So
19 something fell through the cracks there.

20 If you're talking about Hawai'i, what else
21 has being considered? Why was the decision made that
22 Hawai'i had to be it? That will also bring us back to
23 follow the money and where the political purposes override
24 the actual need.

25 So in closing we, are going to keep coming

1 out. We will see you next week Tuesday. We will have
2 friends out in Hilo and Waikoloa and we're going to
3 continue to resist this thing. The best thing we can
4 do -- I don't need apology.

5 I don't need compensation. The best
6 compensation is just stop this and start cleaning up the
7 land. Thank you. (Loud applause)

8 MR. CHANG: Thank you very much. We do
9 need to take a technology timeout. It's only for about
10 two, three minutes. We suggest you kind of take an
11 in-place timeout.

12 MS. LEE: Our next three speakers are
13 Coochie Cayan, Gail Hunter and Heidi Guth?

14 MS. PHYLLIS COOCHIE CAYAN: Aloha kakou.

15 AUDIENCE: Aloha.

16 MS. PHYLLIS COOCHIE CAYAN: My name is
17 Phyllis Coochie Cayan. I'm a concerned taxpayer,
18 overwhelmed voter as well as community activist working on
19 land issues including, but not limited to protection of
20 sacred sites, burial sites for na iwi o na kupuna, proper
21 land use and management with native Hawaiians, state and
22 federal agencies as well as other native American and
23 indigenous peoples.

24 I'm in opposition to your proposal to
25 expand land use in our islands for more military

1 operations at the expense and diminishment of our peoples'
2 lives and at the expense and diminishment of our Hawaiian
3 traditions and culture.

4 I'm also requesting that you extend the
5 comment period at least another 45 days. Because for the
6 average working person, 45 days is insufficient to
7 decipher your Draft EIS.

8 There's different levels of issues going on
9 here. And I'm just going to address one that's kind like
10 about quality of life.

11 I'm going to quote His Holiness the Dalai
12 Lama: "Because we all share this planet Earth, we have to
13 learn to live in harmony and peace with each other and
14 with nature.

15 "That is not just a dream, but a necessity.
16 We are dependent on each other in so many ways that we can
17 no longer live in isolated communities and ignore what is
18 happening outside those communities." Unquote.

19 Our existence on the Earth is all about
20 relationships. Native people's relationships through the
21 United States is one of ongoing genocide, the use of power
22 to extinguish another people's, another culture, other
23 lands for your war machines.

24 The Army's relationship to Hawaiian lands
25 is one of destruction despite your good environmental

1 stewardship in certain areas.

2 I say that tongue in cheek. Because in
3 your western thoughts you keep separating the people from
4 the land. The land is part of us.

5 If you look around you, here on the Waianae
6 Coast is the largest population of native Hawaiians in the
7 world who in their own homeland have the poorest health,
8 the least opportunity for higher education, better paying
9 jobs, the least chance of owning `aina, land for a family
10 home.

11 The list goes on and on. Everybody's who
12 spoke about the problems, social, economic, land,
13 environment, you've heard it, you've seen it. This has
14 been going on for decades. And it has not improved since
15 the illegal taking of the Hawaiian government lands.

16 This is our island homes. Our roots, our
17 genealogy are out here in Hawai'i. Most of you will
18 return to other places and perhaps never live with the
19 long-term impacts of your proposed military operations and
20 the ongoing desecration.

21 You and your descendants will not
22 experience the unsafe environment, drink the unclean
23 water, breathe the unseen pollutants in the air and swim
24 in a polluted ocean.

25 There are the health studies which

1 Dr. Dodge, which Kyle and others have mentioned. And
2 there are health studies that show a distinct parallel
3 that Hawaiians, native Hawaiians' good health in the `aina
4 are directly related because our culture is land-based.
5 The condition of our lands reflect the physical, mental
6 and spiritual condition of our people.

7 You must stop destroying our `aina and
8 begin working to restore the lands for the good of the
9 next seven generations.

10 Yes, there's opala on our streets, but it
11 ain't all of the people who live here. We know people
12 come down here and dump.

13 So last question, I just thought about it
14 while everybody was talking. Is the Stryker Brigade
15 amphibious in the middle of the Pacific Ocean? Thank you.
16 (Applause).

17 MS. LEE: Thank you. Somebody asked me
18 about how many people were signed up. At this rate we
19 have 15 more, just so you know. Is Gail Hunter here?

20 MS. GAIL HUNTER: Aloha. My name is Gail
21 Hunter. I'm a wife, a mom, a nurse, a planter. I spend
22 every day in Makua. I took all these really good notes as
23 I was listening to everybody. I decided I'm not going to
24 bring any of that up.

25 What I really want you guys to understand,

1 every day when I go to Makua this is what I pick up. This
2 is yours. This is not mine. (Depositing various opala on
3 table in front of Colonel Anderson.)

4 I want you to take it home and dump it in
5 the middle of your living room. Let your three year-old
6 pick that crap up and put it in their mouth and don't get
7 pissed off. Understand? Don't get angry about it. Don't
8 get an attitude about it. You understand? I take my
9 boys diving at Makua. I plant in Makua. I am sick of
10 this. You lie to the kupuna of this community.

11 How dare you. How dare you come back here
12 again and ask for more land and more understanding. How
13 dare you. I would be ashamed. And if I wasn't sick I
14 would kick your ass, swear to God.

15 MS. LEE: I'm going to call a break.

16 MS. GAIL HUNTER: No, I'm sorry. I have to
17 get this off my chest. How dare you. How dare you. You
18 cannot take care of the veterans you have made already.
19 How many veterans are there in this community that are not
20 eligible for care?

21 How many? Too many. I'm tired of it. And
22 you should be tired of it too. With your eagles on your
23 damn shoulders you will never have a problem getting care.
24 It's the corporals and the sergeants and the first
25 lieutenants. They never get the care. They get

1 forgotten.

2 This is my home. How dare you. How dare
3 you put this crap in my ground where I grow food to feed
4 my children? How dare you tell me you can control a fire.
5 How dare you. I was in Makua that day. I watched it
6 burn.

7 How dare you. I cannot write my thoughts
8 on papers anymore because I'm so disgusted with you. I
9 don't know who to turn to anymore. I don't know what to
10 say.

11 You understand two days my son and I picked
12 up that from outside your magic defense line. It doesn't
13 go in the -- doesn't cross that road. I thought how
14 stupid do they think that we are? How horrible do they
15 thing that we're so ignorant. How sad.

16 MS. LEE: I'm going to call a break so we
17 can clean up here. (Applause)

18 (Break from 9:20-9:27. Proceedings
19 continuing on following page.)

20 --o00o--

21

22

23

24

25

1 MS. LEE: Our next speaker is Heidi Guth.

2 MS. HEIDI GUTH: Good evening. I'm Heidi Guth and
3 I'm an environmental attorney with the Office of Hawaiian
4 Affairs. And while we will be submitting rather extensive
5 written comments in the near future, this particular
6 testimony is going to focus on the allowed adequate public
7 participation in this process.

8 Currently, the public comment period is set to end on
9 November 19th of this year. We would request an extension
10 actually of a total of 120 days because NEPA, the National
11 Environmental Policy Act, does not simply require public
12 participation. It requires adequate public participation,
13 and 45 days does not allow for that.

14 Because the draft EIS is approximately 1500 pages
15 long and events 1500 pages of that, 45 days is not enough
16 time for adequate perusal, absorption, and criticism of the
17 information contained in these pages. This draft EIS is at
18 least three times the average length of a draft or final
19 EIS, therefore, OHA requests an extension of 120 days,
20 which would be equivalent to three times the minimum
21 required or actually, it's a little less than three times
22 the minimum required, 45 days for input.

23 The Army's regulation, AR 202, implements NEPA for
24 the Army. Basically, what it does is it reiterates all the
25 codes of Federal Regulations that implements NEPA for the

1 rest of the Federal Government. The Army regulation does
2 not provide a maximum time limit for public input. It does
3 include a minimum time, and that is the 45 days.

4 It also suggests a maximum page length for
5 complicated issues. The maximum page length for a regular
6 issue is about 150 pages. The maximum page length, just
7 generally given out as a guideline, is 300 pages. So this
8 is five times the length of what they are guesstimating a
9 final EIS will be, so OHA is only requesting three times
10 the length of time for public input, instead of perhaps the
11 five times that might be required.

12 Public review of the draft EIS is supposed to create
13 a better document in the form of the final EIS. The public
14 needs more time to provide the Army with such informed
15 input, because this document requires much improvement as
16 has been seen from comments this evening.

17 The Army regulation allows for time limits to be
18 changed, and in so doing, requests consideration of some of
19 these factors: The potential for environmental harm, the
20 size of the proposed action, the number of persons and the
21 agencies affected, the degree to which relevant information
22 is known, and if not known, the time required for obtaining
23 it, and the degree to which the action is controversial.

24 The size and extent of the transformation project,
25 the Stryker Brigade, causes the potential for enormous

1 environmental harm. It affects, really, the entire State
2 of Hawaii. It requires much more extensive research into
3 alternative proposals, mitigating measures, and cumulative
4 cultural and environmental impacts on Oahu and Hawaii. It
5 is very increasingly controversial as more people become
6 aware of the content and the extent of the proposed
7 actions.

8 The fact that there's an inadequate range of
9 alternatives presented should be a concern because it is
10 one of the three major sources of successful litigation
11 against EISs. Congress designed in the requisite
12 alternative section to provide a clear choice among options
13 to the public and the decision makers. Only three
14 alternatives, one being the Army's preferred alternative,
15 the other being the no action alternative, which is
16 required by the government, by NEPA, and the third being
17 only the land acquisition on Oahu. With all of the Army's
18 proposed transformation activities maintained and moved to
19 the Big Island is not an adequate representation of the
20 possible range of alternatives according to the U.S.
21 Supreme Court and various other federal courts.

22 The Army must not prefer that its preferred
23 alternative will be the chosen alternative. It cannot
24 commit funds to that alternative until the requisite
25 decision has been approved, which can only happen after the

1 final EIS has been approved, and it cannot stack the deck
2 against any other possible alternatives. The NEPA process
3 is a decision-making process, not a decision-made process.
4 The draft EIS lists a number of possible mitigations.
5 The Army should know by now what it will be able to do.
6 Under regulations it states that the EIS should include
7 planned mitigation measures, not possible ones, otherwise
8 the public will not be a true part of the decision-making
9 process as mandated by Congress because the public may not
10 be commenting upon actual plans. The current wording
11 implies that the Army effects and portrays whatever
12 mitigation measures, if any, it wishes in its record of
13 decision.
14 Therefore, because of the inadequacy of the draft
15 EIS, the length and density of the draft EIS, the extent of
16 impact of the proposed Army transformation process, the
17 level of controversy and concern arising from this
18 proposal, the Congressional intent of the NEPA process
19 itself, OHA requests that the public comment period be
20 extended to at least 120 days.
21 This extension would be a good faith effort on the
22 part of the Army to support public efforts to provide
23 quality, useful input to the Department of the Army
24 decision-making process. Thank you.
25 (Applause)

1 MS. LEE: I know I said Ikaika was next, but I was
2 wondering if you wouldn't mind turning the mike over to
3 Walter Kamana to be our next speaker?

4 MR. IKAIKA HUSSEY: That's fine.

5 MS. LEE: Thank you.

6 MR. WALTER KAMANA: I am a Hawaiian. My name is
7 Walter Kamana. The last I seen myself when I came up from
8 my mother, we are Hawaiian. If anything has been changed
9 by me, it might be my language of speaking.

10 Tonight I seen something that I never like to see.

11 Because, yes, we are a group fighting against the military,
12 but we supposed to be harmless and not taking violence into
13 our hands. Tonight I seen two things. This guy we
14 talking, he was by the revolution that had stopped him from
15 talking.

16 Everybody is a free speech in here. Everybody have
17 their own opinion. Tonight I see another one. Took these
18 things and went to the Colonel and whatever, and throw them
19 there. You think that's fair for a speaker to understand
20 this? It's not. So how the incoming and the outgoing of
21 the feelings of us trying to fight for something that we
22 like and cannot get. Yeah?

23 So it going to turn us kapakahi. It's going to take
24 us thinking, should we be that way or should we not be that
25 way? We are only humans. We're not one monster, but what

1 they like bring, we just plain humans trying to get out
2 'olelo across both sides. Trying to keep peace and harmony
3 among each side so we can come to a point one day and say
4 hey, braddah, we had shared this together and we had win
5 'em. You come the loser. I come the winner.

6 But, no, we come up violent. It's kind of hurting.
7 Without an understanding of the military, without the
8 understanding of the Hawaiian people, all the result of the
9 Hawaiian people, the culture wise, yes. Before in here, in
10 Waianae, they didn't know what was about culture. It took
11 a Kapuna like me to bring in these things to show them that
12 they have a right to be fought in the right way, not to
13 make discussion and angerness to throw, yeah.

14 This is a two-side debate. Remember, in the military
15 we also have local boys serving. We also have them inside
16 there. Yeah?

17 So what I'm trying to say is do not turn the apple
18 rotten on one side. Keep 'em ripe, but keep 'em safe.
19 Because we also have families that fights in the war. We
20 also have families that we like protect. So we got to
21 bring harmony, peace and everything together in one.

22 So that's all I got to say. Sorry, things like this
23 wen happen, and I give my 'olelo towards you whether you
24 good or bad, yeah? But sorry these things happen. As a
25 Kapuna, I very shame to see these things happen, yeah? I

1 have no right talking that way, but I have a right talking

2 that way because I am a Kapuna, yeah?

3 Before nobody understand what was Hawaii stands for.

4 What was all this organization stands for, good or bad, go

5 learn the heart of the Hawaiians. Go learn the history of

6 the Hawaiians to bring the peace, but we also Hawaiians got

7 to correct ourselves sometimes. We fight among each other.

8 Sometimes we got to get together and think. Our generation

9 following truth, or our generation not following truth. We

10 fight among ourselves, so I ask you. Thank you for

11 listening.

12 (Applause)

13 MS. LEE: Ikaika.

14 MR. IKAIKA HUSSEY: Hello. Aloha mai kakou. Aloha

15 ne kai aina mamo. My name is Ikaika Hussey. My family is

16 from Waimea on the Big Island of Hawaii, and I grew up in

17 Kaneohe, which is also the site of a tremendous military

18 installation, a lot of military training. It's a place

19 where, you know, beautiful bay, beautiful mountains, and

20 yet at night, particularly in the evenings, the bay

21 becomes -- it becomes like a war game place. It changes --

22 it's almost like it changes its name. It's no longer

23 Kaneohe. It takes on some kind of fictional name within

24 the imagination of the service persons involved, and it

25 becomes some other place. It becomes a place in which --

1 in which military games are played out.

2 It is our land though. It is our home land. It's a
3 place where my family lives. It's a place where we will
4 live for a long time, and that's one thing I wanted to
5 bring out in this EIS.

6 The words free speech were heard -- were uttered
7 earlier in which we heard, and I want to comment on the
8 words "free speech," and that it's actually very little
9 freedom involved. In fact, every word is uttered under
10 duress, particularly when individuals are being arrested
11 for trying to speak, when the very language that kanaka
12 maolis are speaking in this situation is a language of
13 colonization.

14 It's particularly, and I think this is a hard thing,
15 I think, to understand for people who don't -- it's just a
16 hard thing to understand, I think, is what it is like to
17 grow up around -- kind of inside a military installation
18 when you're not military yourself when it's not your choice
19 to be a part of that landscape.

20 You know, we talk of cultural landscapes, the
21 dominating landscape in Hawaii is a military landscape. A
22 good example is Waianae, and I know I'm not from Waianae,
23 so I can't speak as a person of Waianae, so kala mai if I
24 say anything that's incorrect, but you either have mauka
25 areas, which are private land here, you know, we have

1 resorts which occupy the mauka areas, or you have military,
2 precluding any kind of citizen, civilian, kanaka maoli,
3 regular person access, okay, and that's just to go hiking
4 let alone if you want to, you know, get stuff to make a
5 house or food, you know.

6 Also, you know, you have Farrington Highway which
7 runs right across the beach, which makes it difficult to go
8 swimming. It's difficult to take a bath. It's difficult
9 to catch fish, okay? That's what it's like to live in
10 Hawaii. And it's easy if you stay inside a resort. It's
11 easy if you go to Waikiki and all you want is the tourist
12 experience, but to actually be a Hawaiian in Hawaii is to
13 live under a constant state of duress, a constant threat of
14 fear that if you want to go to Pu'uloa, which is now called
15 Pearl Harbor, if you want to go to Mokapu, which is now the
16 Marine Corps Air Station, I guess they changed their name,
17 that there's a person standing at the gate who has
18 firearms.

19 And you, in your car, you walking, you on your bike,
20 do not -- it's a constant state of threat and what it does
21 to a Hawaiian person, what it does to a kanaka maoli is it
22 makes us either very, very upset or very, very docile. We
23 start to get really nice and we try -- you know, we kind of
24 kaukau a little bit. We give up space in the lane to let
25 the Strykers drive by, okay? So that's just kind of to

1 give you the psychology of what it means to be living in a
2 military colony like this.

3 The EIS that we have in front of us, thousands of
4 pages of the Environmental Impact Statement, it's a big
5 document. I want to focus on the name, it's an
6 Environmental Impact Statement, a draft EIS, but it's not a
7 human impact statement. It takes into consideration the
8 water, the land, but from a Hawaiian perspective, you can't
9 separate land from people, people from land.

10 I'm going to tell you a brief story to illustrate
11 what I'm trying to get to. In 1848 there was a revolution
12 in Hawaii, that was called the Mahele. The Mahele led to
13 the vast privatization and ex-appropriation of lands from
14 indigenous kanaka maoli, and not Ali'i. Ali'i got a lot of
15 land. Maka'ainana, however, lost a lot of land, a great
16 percentage.

17 What's interesting, and the thing that strikes me as
18 very constructive about what we're doing here today is that
19 shortly after 1848, you have the first instances of
20 wide-scale alcoholism, wide-scale drug abuse, you have
21 masonic movements springing up so that regular people, what
22 we would now today call working class laborers, it's those
23 people who were trying to deal with the situation they live
24 in, trying to deal with the world in which they no longer
25 had freedom, they no longer had all kinds of rights. They

1 couldn't go mauka. They couldn't go makai. You know, land
2 was taken away from them.

3 They were taken away from themselves because so much
4 of what it means to be Hawaiian is the connection with this
5 place, and so one question that I do have which pertains
6 directly to the EIS is what is the quantity of money --
7 what is the value of all of the drug rehab that's going to
8 have to take place? What's the value in dollars, the
9 opportunity costs, the cost to the people of the alcoholism
10 that will increase, more than what we already have now,
11 because of the additional 25,000 acres that will be taken
12 away from Hawaiian people, from people in Hawaii, okay?
13 Those are some questions that I have.

14 What's fascinating to me, as a person who likes to
15 read history, is that we're still here. That I can stand
16 here and it's not because I have rights. It's not because
17 I have freedoms of speech. The reason why I'm here is
18 because my ancestors fought to have me here. They had to
19 fend off, they had to ward off people who tried to take
20 their lives from them. They had to ward off people who
21 tried to take their land from them, who tried to take their
22 water from them so they couldn't plant kalo or even drink
23 water, okay.

24 I'm not here because of rights that were written down
25 somewhere. I'm here because of struggle. I'm here because

1 of conflict. I'm here because of strength, of people who
2 have names and they stand behind me, and I'm only here
3 because of them. We are only here because of them.

4 If we are serious about loving Hawaii, if we want to
5 make sure that we will stand here and that our generations
6 to come will stand here, we really need to reconsider the
7 human impact on Hawaii, the human impact on the rest of the
8 world.

9 This is an interesting thing. In the past week, DMZ
10 Hawaii Aloha Aina has received several letters, messages of
11 solidarity from people all around the world. Just on my
12 computer I have messages from Italy, Belgium, and Thailand,
13 people expressing solidarity that they know that this is
14 not just not in my backyard. It's not that I don't want
15 you to build, you know -- I don't -- it's not just that I
16 don't want you to take 25,000 of my acres. I don't want
17 you to take this land from anywhere.

18 I want you to reconsider your foreign policy, the
19 foreign policy that rationalizes this militarization, the
20 overdeployment of United States troops in 156 out of 190
21 countries. There's barely two dozen countries that don't
22 have United States military, okay? So that's my message.

23 Thank you very much.

24 (Applause)

25 MS. LEE: Imiola Young.

1 MR. IMIOLA YOUNG: Ho'onau kealoha e na mamō me ka
2 'olu 'ike ola. It's good to see all the aunties and uncles
3 from the community from the Waianae coast, people I haven't
4 seen for a long time, and as I said in my greeting, na mamō
5 me ka 'olu 'ike ola. Although we may take stands -- we may
6 have different stands and different opinions tonight, we're
7 all birds with feathers.

8 And I'm not from Waianae. I've been out here over
9 twenty years. I was actually born and raised in Kapahulu,
10 but I grew up at the edge of the huge lo'i in Waikiki, and
11 those of you who have known me for twenty years out here in
12 the coast, so you know I'm a very niele person, and so I
13 wanted to find out about taro, so I came out here to
14 Waianae to plant taro. I used to go boogie -- piper board
15 surfing down Queen Surf, and I said, this is the ocean?

16 So being a niele person, I came out to Waianae and
17 did some opelu fishing. So, in a sense, I've been like an
18 ahupua'a apprentice for over 20 years trying to learn what
19 the real Hawaii was, and unfortunately, in the school
20 system we did not learn a real Hawaii. I was really denied
21 the -- and I want to thank -- take this occasion to thank a
22 lot of the Kapuna from this community for being my teachers
23 and teaching me a lot of the real Hawaii.

24 I have a question, and I'd like to ask this question
25 of all of you. It's why? That nasty question we always

1 hear all the time, why? Why? Why? Why? If the Hawaiian
2 people were the most literate nation in the world back in
3 the 1840s, 1860s, what happened?

4 I've been working in the school system for the last
5 twenty years in Waianae working with the children from
6 Waianae from grades K through 12, and I don't have to
7 remind you, every time we look at the newspaper, it's
8 pretty dismal. You know, they're always putting down the
9 Hawaiian people because of low reading scores, low this,
10 all kind of scores are low or lowest in the world, if not
11 the nation.

12 It's really, really kind of sad, but why? Does
13 anybody have an answer? Marion has. Okay. I'm sure we
14 all have our answers to it, and I'd like to share some of
15 my answers tonight being in the school system for a couple
16 decades.

17 And I would -- I would put the -- one of the biggest
18 problems, the presence of the military in Hawaii and in the
19 next few minutes I'll try to show you why. My conclusion
20 after being in the school system for over 20 years why I
21 think the military is one of the biggest reasons for the
22 low scores of our children in the -- especially on the
23 Waianae coast.

24 I think Americans are beginning to grow up. I think
25 America is beginning to learn things about life, and

1 September 11th, unfortunately, was one of those turning
2 points where Americans learned pain. Some psychologists
3 use the term PTSD, Post Traumatic Stress Syndrome, and if
4 you look at all the magazines from military veterans
5 magazines to business magazines, they talk about this thing
6 called PTSD, where if somebody -- a big trauma, a big
7 tragedy in the family or the nation, in this case, people
8 have developed a tremendous anger because of what was done
9 by outsiders on September 11th.

10 Well, for America, it just happened, but for the
11 Hawaiian people it happened a hundred years ago during the
12 first sneak attack in Hawaii. A lot of us see Pearl Harbor
13 as the first sneak attack in 1941, but 1893, to many
14 Hawaiians, was the first sneak attack, and the trauma, the
15 anger, the school, we have to deal with the anger of the
16 students; anger on a subconscious, unconscious level, and
17 when you're angry, it's a little hard to learn. It's a
18 little hard to read, and it's definitely a factor.

19 We need more discussion in the community. We need
20 more professional people to look at it. We need the
21 intelligent minds of the military to work on that aspect.
22 That has a definite environmental factor.

23 The other thing is that if you study -- because
24 Hawaiians have a different deep culture, and what is the
25 deep culture? Well, if you have a 2000-year-old culture

1 like Hawaii is, maybe that's a conservative estimate, maybe
2 it's a 5,000-, 10,000-year-old culture, but it's an ancient
3 culture. You've got to have many deep aspects to it. One
4 aspect is, as we all know, is the ohana, and when you --
5 when you come into a community and you take Lualualei,
6 which some government documents say is the best soil on the
7 entire island, when you take away the main highway over the
8 mountain range at Kolekole where people daily use to carry
9 the kalo and fish and it was the main part of the ancient
10 economy of Hawaii, you take that away, you take away Makua,
11 you're going to impact the family.

12 In the old days for hundreds of years, there was no
13 such thing as unemployment because ohana functioned as a
14 unit. Now, if ohana, as we all know, those of us from the
15 community, those of us who -- and because we're all birds
16 with feathers, you know, we're all human beings, many of us
17 here -- whether we'll admit it or not, many of us learn
18 about the Hawaiian culture, many of us respect the Hawaiian
19 culture, and I'm sure many of us will admit that the ohana
20 is very important and that the ohana is the basic unit of
21 education. The ohana is -- the family is the basic unit of
22 teaching, and if you're going to take -- if you're going to
23 hurt the bread winners, if you're going to hurt the
24 fishing, the traditional economy, you're definitely going
25 to affect the learning, the education of the children.

1 That's basically what I have to say, and just one
2 more thing, is that the -- I was in Vietnam. I got
3 drafted. I was there in 1968. I was a medical adviser and
4 I was also in the Peace Corps, so I've seen a little bit of
5 both sides, and I actually met some humane people in the
6 U.S. Army, in the U.S. Military. What I'm saying is that
7 I'm not against the military, because when the United
8 States admits it's injustice and leaves Hawaii, which I
9 believe will be very soon, we will need to defend
10 ourselves, and I can see some of you in uniform, some of
11 you without uniform, joining us, sharing your expertise
12 with us because we need a military, but we don't need an
13 offensive military that goes all over the world and
14 ho'ohemo and, you know, creates hewa overseas. We need a
15 defensive military that will defend our land, and I think
16 if you look at Hawaiian history, Hawaiians know how to
17 defend their land and the woman -- the women in particular
18 are very powerful in Hawaiian society, very powerful
19 warriors.

20 And -- so the military -- use of military enforcement
21 is not defending us. Hawaiians had the freedom -- before
22 the U.S. Military came, Hawaiians had freedom to fish the
23 ocean, to speak their language, to -- because of the kapu
24 system, there was full freedom of a full stomach, full
25 freedom to catch the opelu, to plant, to have the water

1 because of the very intricate kapu system.

2 So, I'm saying that the U.S. Military is defending a
3 certain deep culture. It's not defending the aloha aina
4 deep culture. The aloha aina deep culture -- actually, the
5 entire world lived in aloha aina once upon a time.
6 Everybody farmed. Everybody fished. But, of course,
7 something happened 4 or 500 years ago. The bankers, the
8 money people started getting very, very powerful, and you
9 saw that part of the -- William Aila and Kyle were holding
10 up, that poster, that's what the U.S. Military is
11 defending, that certain bunch of people who need that
12 freedom. That's the freedom the military is defending, the
13 freedom to make as much bucks as you can, but somebody
14 suffers, and Hawaiians have suffered for too long.

15 So you're defending that culture of domination.
16 You're defending that culture of individualism, which is
17 not the Hawaiian culture as I know it. Hawaiian culture is
18 more 'olu'olu aloha, you know, it's the direct opposite,
19 and this culture because it's an older culture and a more
20 spiritual culture, is going to survive, and I know many of
21 you support that culture, although unfortunately, in a free
22 country, you have to support it secretly, but thank you.

23 MS. LEE: I'm going to suggest that we take a
24 ten-minute stretch. It's going on three hours. Ten
25 minutes and we'll call you back and resume with Mr. Kit or

1 Ms. Kit Glover.

2 (A break was taken at 9:50 p.m. to 10:05 p.m.)

3 MS. AMARAL: It's about five after ten now. I had
4 the opportunity to be a part of the scoping hearings that
5 took place last year that were held at public schools, and
6 right around this time, ten o'clock, no matter how many
7 people were in line to speak, by the way, the janitors
8 would start closing the windows and shutting the benches on
9 the tables, and whether we were ready or not, the janitors
10 made it clear, we were leaving and that was the end. And
11 we got good scoldings for that. We got good scoldings for
12 that.

13 So, some people have asked the question, why are we
14 in these private facilities? In part, it was to try to
15 accommodate as many speakers as we could, not have windows
16 closed and benches closed on us, to stay as long as we
17 needed to stay. I hear, however, those of you who have
18 come up to us in the breaks saying can we get back to
19 talking about the rules and remind people that we've asked
20 that you try to limit your speaking to five minutes. I
21 remind you all, of course, there's nothing I can do to
22 force a speaker to stay in five minutes. We ask your
23 cooperation. We ask you to help us out and stick to five
24 minutes.

25 I've counted and we've got 12 people left. If

1 everyone speaks just ten minutes, then we're here for at
2 least two more hours. If they speak for five minutes, then
3 that makes life a little easier for us.

4 Okay. The next three speakers, we've got Kit Glover,
5 Doreen, I think it's Doreen Redford, and Lisa Richardson.
6 Kit. Aloha.

7 MS. KIT GLOVER: An EIS, the way I look at it, stands
8 for excuses for intentional sabotage. Already the military
9 has control of approximately 24 percent of the land area of
10 this small island. Already it has polluted the land.
11 Those of you who have been over in Kaho'olawe probably had
12 the same experience that I did. It brought tears and I may
13 cry when I'm telling you about it. You're restricted only
14 to the strict path, 10 feet off the path, there's a --
15 there's little wires going up in the air with a little red
16 square on it. That means buried right here is some
17 dangerous stuff. Hasn't been cleaned up. And the military
18 wants more land?

19 Where is our budget? If you look at the United
20 States budget and you compare the military portion with
21 that of other nations, you have to add up the next 25
22 nations, including, you know, Germany and Russia and all of
23 them, before you get the same equivalent money that the
24 United States already is spending on military.

25 Previous speakers have already pointed out that that

1 money could be used for much more worthwhile things. I
2 think in your hearts, even those of you who are in the
3 military, must realize that killing other people is not
4 right. And to -- whether we do it with Strykers or whether
5 we do it with a rifle, it's not right.

6 If we have more land given toward the military on
7 this island, won't it make just a larger target? Why did
8 Pearl Harbor get attacked? If there hadn't been a military
9 installation there, there would have been no point. The
10 expansion of the land, in other words, I think will make it
11 a more provocative target.

12 Someone has said that wherever there is a war, if you
13 look, there is injustice. Why aren't we spending our
14 budget on correcting the injustice that's in society? A
15 previous speaker has quoted the Dalai Lama, and I will,
16 too. "Peace is not just a dream, it is a necessity."

17 Thank you.

18 (Applause)

19 MS. AMARAL: Well done. Thank you. Doreen Redford,
20 Lisa Richardson, followed by Kathleen Kelly.

21 MS. DOREEN REDFORD: Aloha. My name is Doreen
22 Redford. I love this land. I'm here to say no to the
23 Stryker and no to the military. We, the United States, are
24 the biggest power in the world and all we do is take more,
25 especially from folks with brown skin, women, and the

1 children. You wonder why people bomb us? We need to
2 awaken to our only hope, and that is love for one another.
3 Because war for peace is an illusion. You say the best
4 defense is a good offense, and you people are offensive,
5 and that's why we want you to leave.

6 I have read so many spiritual books about how love
7 conquers all, you know. You guys want to conquer, why
8 don't you use love? I've read that the biggest religion in
9 the military is Christianity. Well, Christ didn't go
10 around saying, you know, take your brother's land and kill
11 him. He talked about love. How come people can't figure
12 it -- how come people cannot get it? When are we going to
13 get it?

14 Well, of course, this is only about power and money.
15 It always is. Always has been. Like the guy said
16 before -- sorry I forgot your name -- you know, we live off
17 the land. You know, that's the way it is intended, you
18 know. And then some guys decided to exploit, and that's --
19 you know, the power and money equals exploitation. Over
20 everything and everyone, but you.

21 I believe that is what breeds terrorism and anger and
22 hate, and you don't really want to get rid of terrorists
23 either because without them, you wouldn't be able to make
24 your money and you wouldn't be able to have the power to
25 take more in the name of defense. If you're to be truly

1 courageous and good in your hearts, expand yourselves to be
2 able to love, with a capital L, those around you, and only
3 then will things turn around and get better. Only then.
4 Otherwise, we will just keep on building our hell and
5 passing it on to our children. Please, let's not do that.
6 No more military.

7 Thank you for listening to me.

8 (Applause)

9 MS. AMARAL: Lisa Richardson followed by Kathleen
10 Kelly, followed by Albert Silva.

11 MS. LISA RICHARDSON: Hi. I want to talk a little
12 bit about systems theory, which basically tries to point
13 out connections that people may not see.

14 I work with native Hawaiian women, military wives,
15 people from the Mainland. I'm a domestic violence social
16 worker, and I also have worked with the perpetrators of
17 domestic violence, and one of the things that we try to
18 focus on when we're working with perpetrators is the
19 importance of empathy and accountability. And sometimes
20 when I would do the men's groups, which I no longer do, I
21 would feel like a big hypocrite. Because while we're
22 teaching people who are perpetrating and abusing their
23 partners to be accountable and to have empathy, I am part
24 of and I represent a larger system that benefits incredibly
25 from exploiting others, and I think there is not a mistake

1 that the -- I think it's connected out here, but it's also

2 very close.

3 The special forces soldiers who returned from

4 Afghanistan to the North Carolina, Fort Brag area, within a

5 few weeks or a few months of each other killed their

6 partners. I think two of them also killed themselves.

7 I'm concerned about you, your families, your

8 children. I read a statement from a bunch of Vietnam

9 Veterans that says that more veterans have killed

10 themselves than were killed in Vietnam, not to mention the

11 civilians that were killed in Vietnam.

12 Do you know how many civilians who were killed in

13 Afghanistan? Do you know? Do you know how many were

14 killed in Iraq? Do you know how many? I mean, why don't

15 you know that? Isn't that important? Shouldn't we know?

16 We want to bring equipment over here, and we're

17 killing innocent civilians, and why do we want like --

18 there's a connection. And I do, I care about them and I

19 care about you, and I care about this land, but if -- if

20 people don't see the connection -- I mean, your leader is

21 dishonest. He should -- I believe he's a war criminal, and

22 I just don't -- I don't know how you rationalize this. I

23 would like to understand better how you do.

24 (Applause)

25 MS. AMARAL: Thank you. Kathleen Kelly followed by

PACIFIC REPORTING SERVICES UNLIMITED, INC.
(808) 524-PRSU

1 Albert Silva followed by William Aila.

2 MS. KATHLEEN KELLY: Aloha. My name is Kathleen
3 Kelly, and I want to go on the record as opposing the
4 Stryker Brigade. I think the connection that the last
5 speaker was talking about is the -- these huge corporations
6 that are going to make and already make billions and
7 billions and billions of dollars off of the military, off
8 of our foreign policy stance, and everything connected to
9 having a military that backs it up.

10 Just imagine how much it costs to make these weapons,
11 these weapon systems, the computers, how much it costs to
12 feed an Army overseas for one day. The U.S. Military has
13 an abysmal record in causing destruction and not cleaning
14 up after itself. Take the testing of atomic weapons as an
15 example in the 1950s; Majuro, Bikini, the Marshalls,
16 Johnston Island, and Guam where the workers cleaned these
17 ships and are now sick. The U.S. Military refuses to
18 accept responsibility. The medical care is virtually
19 nonexistent for some of these people in those parts of the
20 world.

21 I see patients from these parts of the world with
22 tumors on their body, on their necks, that are huge.
23 They're advanced tumors, so you know they're only getting
24 to Hawaii when they're half dead. The military only cleans
25 up when it is forced to. Will the trashing of our land be

1 any different from Stryker?

2 And I would like to talk about these hearings. I
3 believe that this is an experiment by the U.S. Military to
4 keep the public out. How do you keep the public out? You
5 don't give them enough time to study the draft EIS, you
6 have these meetings in private places and dream up some
7 hair-brained idea about people leaving their signs outside
8 or face arrest. The comment period must be 120 days.
9 There must be meetings on Kauai and Maui.

10 I only believe that you're here because it's a legal
11 requirement. I don't think you care what we say. If you
12 can't figure out where to have a public meeting besides at
13 private hotels and country clubs that can stay open all
14 night, then you don't deserve the responsibility of having
15 the Stryker Brigade here.

16 Colonel Johnson, what are going to do about those
17 arrests? I'm sorry, Colonel Anderson. And please don't
18 say that it's not your responsibility. What are you going
19 to do about the arrests of the public on Monday night and
20 last night?

21 MS. AMARAL: I think, in part, the purpose is to take
22 public comment, and so your question will go down as
23 comment rather than to get into a debate or a conversation.

24 MS. KATHLEEN KELLY: I think that the charges can be
25 dropped.

1 (Applause)

2 MS. AMARAL: Albert Silva followed by William Aila
3 followed by Leandra.

4 MR. ALBERT SILVA: Mahalo. Aloha, everyone. I have
5 this opportunity, like everybody else had, to speak your
6 peace or quiet up. In other words, shut your mouth. But I
7 want to introduce myself as a lineal descendent of a
8 Hawaiian lineage that goes back maybe, at least, 200 years.
9 I am a first kane from these wahines that were from
10 Waianae.

11 The history of Waianae, especially for its use as a
12 military training place, goes back to the Hawaiian Kingdom.
13 Waianae was considered an ideal place to train soldiers.
14 These soldiers had that opportunity from the time of the
15 Kingdom to sharpen up and be ready to face the enemy. My
16 purpose here tonight is to afford you some of that history.

17 After December 7, 1941, as an example, the military
18 started to develop training facilities here on the Waianae
19 coast. I was just a youngster then. Now, I got a little
20 gray on the head. Makua was selected because of its
21 seclusion and a place where they could train combat type
22 with -- especially soldiers. A lot of these soldiers went
23 to them front lines and never made it back.

24 There at Pokai Bay, they built a pier to simulate
25 landing ships, landing craft, especially. Us kids made

1 friends with the Navy guys and the Army guys. They let us
2 aboard those landing craft boats. We went as far as Makua.
3 We went as far as Maile and made landings. The simulation
4 of a boat with those nets that they could repel from was a
5 preparation for the soldiers, especially, and the Navy crew
6 on those landing ships to prepare them for invasions of
7 these far-off places like Okinawa and other places in the
8 Pacific.

9 Them guys, they were all good guys. They carried out
10 their duties to the best. I am so grateful that we had
11 people then that were willing to stand up and be counted.

12 Waianae was just a small town. Right there at the
13 boat harbor was a very extensive anti-aircraft training
14 facility. They fired at sleeves. They fired at targets of
15 all kinds, both aerial sleeves and by drone planes. And
16 them GIs, the Navy guys especially, they handled that
17 anti-aircraft guns to the best of their ability. I know,
18 because they knocked down a lot of them drone planes. They
19 shot holes in the sleeves that was towed by an aircraft, by
20 a plane, and so many times -- thank you. And then whenever
21 they would shoot the cable and the sleeve would fall,
22 especially on the land, us kids would just scramble to try
23 to get the sleeve.

24 So, Waianae has always been a place where soldiers
25 and sailors could train and be prepared for harm's way.

1 Mahalo and aloha.

2 (Applause)

3 MS. AMARAL: William Aila followed by Leandra

4 followed by Maile Hallums.

5 MR. WILLIAM AILA: Aloha mai kakou, everybody. Let's

6 all wake up and get ready. It's kind of late. My name is

7 William Aila, and I, too, live on the Waianae coast, and I,

8 too, come from a lineage of people that have been born here

9 for many, many generations. And I'd just like to say,

10 tonight was a good example of how signs are not that scary

11 after all, so maybe in the future, for the next couple of

12 meetings, this can become a policy and we can have our

13 signs and you can have your signs and we can have good

14 discussion.

15 Right off the bat, 45 days is not enough to review

16 your EIS. I don't think there's anybody in here today that

17 can say 45 days is enough. It just is not enough. I still

18 haven't read it, and I've gone through it, and I've got to

19 go through it some more and more and more. Just getting

20 through the acronyms, three pages, that in and of itself

21 was a lot of work.

22 Also, the EIS -- the draft EIS is so complex and it's

23 too long and it's too complicated to be reviewed in that

24 short period of time, so I would recommend 90 -- I'm glad

25 OHA was here and they requested 120. In retrospect, maybe

1 120 is better.

2 My biggest beef is what's not in the EIS. In the
3 many scoping sessions that occurred about a month -- excuse
4 me, a year and a half ago to two years ago, I myself asked
5 several questions. The biggest question and the simplest
6 question I thought to answer was why not just -- the 25th
7 Infantry has its 1st Brigade up at Fort Lewis, Washington,
8 undergoing transformation right now, so poor little me with
9 my common sense, trying to think about ways of saving
10 money, because that's what government should do, my first
11 request was why not do a survey or a study of what it would
12 cost to move the 2nd Brigade there? Real simple. But you
13 failed, not you personally, but this process failed to
14 answer that question and I think I know why.

15 It's not because you didn't want to answer the
16 question, it's probably because somebody up above you told
17 you not to answer the question, and that in and of itself
18 shows how this process is not an open process. For if it
19 were an open process, we would be discussing or a part of
20 the draft EIS would include that option or that
21 alternative.

22 So I'll ask again -- for the record, I'll ask again,
23 please include as an alternative the option of taking the
24 2nd Brigade, not just for training purposes, but take it
25 forever to Fort Lewis, Washington, because it's probably

1 cheaper to do it there. I don't think anybody can argue

2 with that, except maybe Senator Inouye.

3 The EIS does not include -- and I asked for this many

4 times -- an investigation of either constructing a pack

5 range over at Schofield or the ability to have within your

6 new multi -- your proposed new multipurpose ranges, the

7 ability to do an infantry pack, thus relieving the need for

8 the Army to have Makua.

9 Another real simple request. Save you money. You

10 can do it all over there. You don't have to move your guys

11 all the way out here. You don't have to pack them, you

12 don't have to pay for the fuel, you don't have to pay for

13 the helicopters. Real simple, just train them right there.

14 Come out of the yard, go to the motor pool, pick up the

15 stuff, right there.

16 Again, that was not addressed and I know it's not you

17 guys. I know it's somebody above you, but once again, it

18 proves that this process is not an open process. It's not

19 a real process, because if it were real, you would be

20 asking and answering my first two fundamental questions.

21 So you asked us to trust you. You asked us to

22 believe you, but you lie because you choose not to answer

23 those questions. You failed the NEPA process. You failed

24 the NEPA process in not answering those two questions. You

25 have an opportunity to gain my trust and respect back again

1 by answering those two questions in a legitimate, well
2 thought out way and including that in the final EIS, which
3 would then become the number one alternative, I bet,
4 because it's cheaper and better.

5 The draft EIS also fails in its painting a rosy
6 economic picture of how much money it's going to bring to
7 Hawaii. It fails to address the true cost. The cost of
8 the poisons that's going to be added to the land. The cost
9 of the health problems that are going to occur from us
10 down-winders, us guys who live in Lualualei who see the
11 smoke come over, not only from the military, but from Del
12 Monte, from Dole, from the Kahi Power Plant when the winds
13 blow southwest, like they did for the last six days, and
14 behind the smoke from the Kahi Power Plant is the smoke
15 from Campbell Industrial Park, and the EIS doesn't include
16 a cumulative impact of all of these things, because you
17 know why? You control the question. He who controls the
18 question, controls the answer. Once again, pointing out
19 that this is not a fair and open process. If it were, you
20 would be answering those questions.

21 The very first question that I asked at each one of
22 the scoping sessions was show me the treaty of annexation
23 that exists between the United States and the Kingdom of
24 Hawaii which allows you to claim the land. And I asked
25 that question knowing the answer. There is no treaty of

1 annexation. It never occurred. The United States
2 passed -- United States House passed -- and I want to give
3 some of the guys in the audience a history lesson. They
4 passed what is called the Newlands Resolution, and the
5 Newlands Resolution was a domestic act. It only had
6 jurisdiction within the boundaries of the United States at
7 the time, which did not include the Kingdom of Hawaii.

8 So by your claiming jurisdiction of the land, you
9 violate the United States Constitution, and until such time
10 that any of you guys, Tetra Tech involved, included,
11 anybody in this audience, anybody in the State of Hawaii,
12 which is not the State of Hawaii, because if you follow
13 everything that occurs from the failure of annexation,
14 anything that falls from the poisoned tree is poisoned
15 fruit, and therefore, doesn't exist.

16 Anybody out there, please show me this treaty of
17 annexation. I've asked for it for many, many years. It
18 doesn't exist, and I'll tell you why it doesn't exist
19 because 30,000 plus Hawaiians signed two petitions that
20 went to the United States; 30,000 Hawaiians and
21 non-Hawaiians. There were non-Hawaiian names on that
22 petition that said, no. No thank you, Mr. President
23 McKinley. No thank you, members of the United States
24 Senate. No thank you. We don't want to be a part of you.
25 And that's the 'eha that you feel today.

1 And you guys in the uniform didn't do it, but the
2 guys that preceded you, your genealogy, the military
3 genealogy that precedes you, participated actively and one
4 of these days, I tell you, the people that we send to the
5 museums and the people that we send to the United States
6 archives are going to find the secret document that an
7 Admiral named Brown gave to Captain Wiltsey, who was the
8 guy who ordered the marines ashore that day, because this
9 document exists. It's referred to in other documents.
10 It's a secret coded document, which we know will prove that
11 the United States not only had complacency, the United
12 States intended for the evil of annexation to occur and the
13 revolution to occur.

14 Now, you want to fix things, bring that stuff out,
15 let's recognize it, and let's recognize that a big
16 injustice was done and then let's work to heal because I
17 heard a lot of talk about, let's heal. Let's stop the
18 lies. Let's stop the lies about annexation. Show us the
19 document, admit that the people that went before you
20 weren't as honest as maybe some of you are, and then we can
21 move on. Until we get to that point, it's going to be very
22 hard to move on. You can continue to claim jurisdiction,
23 but you know what, my mana'o, you no more jurisdiction,
24 'kay? Only because you got the bigger guns.

25 I tell you right now, if Hawaiians had the bigger

1 guns, we would probably be at war right now. I want you to
2 understand that, because that's the hurt that the wahine
3 that put the stuff on your desk felt. She may not have
4 presented it in the most optimum way, but what she
5 presented -- and I hope you can look past how it was
6 presented, what she presented was the cumulative impacts of
7 several decades of military use of Hawaiian lands. Those
8 shells, those pieces of metal that have escaped the
9 military installation and is now on the beach is proof of
10 the cumulative impacts that the U.S. Army, the U.S.
11 Marines, and whoever else trained at Makua had.

12 We're not talking theoretical like now in the EIS.
13 That was proof. That was solid proof. I apologize for how
14 she presented it to you. That was inappropriate. A better
15 way to do it would have been to just leave the whole bag
16 right there and you would have had it in your hand, you
17 would have seen it, you would have touched it, you would
18 have smelt it, you would have felt it, but you know what,
19 that's what all of our parents and some of our grandparents
20 have had to live with.

21 So, please, take that message, not the fact that she
22 presented it to you in an inappropriate way, but take the
23 message that this is proof of the cumulative impacts and
24 that we are impacted by those things. My grandson, when he
25 goes to the beach, her son, when he goes to the beach, he's

1 impacted. He can step on it. He can get cut. He's

2 impacted.

3 The DEIS fails to address adequately pollution in the

4 social justice issues. We talk real dryly about 25 percent

5 more ammunitions being exploded in the additional training

6 that's going to occur. What does that mean? What does it

7 really mean? It doesn't tell us how much is going into the

8 soil to add to whatever is already there, to interact with

9 what's already there. It doesn't say anything about that.

10 It doesn't say -- in the analysis, it doesn't say that

11 Hawaiians spend more time in the dirt, more time planting,

12 more time eating fish, and that those levels of exposure

13 for somebody maybe in Kansas are not the appropriate levels

14 of exposure to be basing your projections on because we do

15 things differently in Hawaii. Those of you in the military

16 who have been here for more than about six months begin to

17 understand that. We do things differently in Hawaii.

18 We don't have winters where we hide in our houses.

19 We're outside all year long. Outside breathing. Outside

20 touching, and that adds impact to your analysis if you

21 don't take that into consideration. In fact, that is part

22 of the social justice analysis that has to occur, but from

23 what I saw, has never been taken into account, okay? So we

24 need to go back and take a look at those numbers as far as

25 concentrations -- acceptable concentrations.

1 The draft EIS does not include that cumulative impact
2 that I talked about from all the pollution that comes over
3 the mountain that's not solely yours. That comes from Dole
4 and Del Monte and Kahi and the Campbell Industrial Park,
5 and the industrial landfill that we have in Nanakuli and
6 the other industrial landfill that's being proposed for
7 Maile. It doesn't take into account all of that stuff that
8 is airborne that we get to breathe, all for the economic
9 benefit of everybody that lives on the other side of that
10 mountain. It's a very important point.

11 The draft EIS tries in a very dry and a very
12 scientific way of looking at the cultural impacts by
13 looking at the impacts on cultural sites, but fails to
14 recognize the cultural sites are not just piles of rocks.
15 The cultural sites are the springs and the wells because
16 all wells started off as springs. The water had to be
17 there first before somebody could dig it up and make it a
18 well. And if anybody in here wants to know how sacred
19 water is, try going a week without drinking it and then
20 you'll understand how sacred water is.

21 I see nothing in the draft EIS that talks about
22 protecting the soil, the springs, and the wells from the
23 contamination of those constituents, of those explosions
24 that is sure to enter those water tables. I'll give you an
25 example. You wouldn't have a treatment center up in

1 Schofield and Wheeler treating your water if somebody
2 didn't spill a whole bunch of solvent type of material
3 during World War II. It went down into the water table,
4 and now in order to drink it and make it safe for Schofield
5 and Wheeler residents, you've got to treat it. That shows
6 cumulative impacts. That's an example.

7 There's nothing in here that talks about the
8 potential destruction of mana by a Stryker vehicle
9 inadvertently or advertently running over a cultural site.
10 You guys cannot address that because I don't think there's
11 anybody on your staff that can understand how to do
12 something like that, how to put mana back in the ground
13 after something is destroyed either by running it over,
14 disassembling it, or burning, so how can you say that the
15 cultural impacts -- that the impacts on cultural sites
16 known in the EIS can be mitigated? It can't be mitigated
17 unless you know how to restore mana, and I don't think
18 anybody on your staff is qualified to restore mana. And I
19 don't think you folks at Tetra Tech have been trained on
20 how to restore mana.

21 So there's a failure of understanding Hawaiian
22 cultural practices, for lack of a better word. We don't
23 practice it, we do it. That's the difference.

24 And finally, the most glaring thing that's missing
25 from this draft EIS is it does not discuss how you're going

1 to clean up the existing stuff or how you're going to clean
2 up the additional 25 percent that you plan to add to the
3 various ranges, to the various pieces of property that you
4 currently control, and you notice how I use the word
5 "control," not own. You don't own it. Okay. I'm telling
6 you right now, you don't own it. You can't show me that
7 treaty of annexation, so you don't own it. You're
8 borrowing it. Some of my friends say you're occupying it.
9 Well, however you want to call it, you don't have clear
10 title to that land. Okay.

11 The fire plan, I thought I found parts of a fire plan
12 in there, but I went back to look and I'm not sure if it's
13 in there or not, but I guarantee you that it's inadequate,
14 given the fact you couldn't control a controlled burn at
15 Makua, not just this time, but the previous two times, so
16 the fire plan needs to be better explained given the fact
17 that I'm -- I hope you're learning new stuff from that
18 Makua fire.

19 And finally, the draft EIS does not -- nowhere in the
20 draft EIS is there a discussion on the impact on Hawaiian
21 Electric, the Board of Water Supply, the refineries. What
22 is the additional impact of the demands that are going to
23 be created by the additional people? And it's not just the
24 Stryker Brigade, because now if we get that carrier group,
25 that's going to bring a whole lot more people into the

1 State of Hawaii with all of their additional demands. So
 2 you can see already the draft EIS, when it talks about
 3 cumulative impacts, really isn't talking about cumulative
 4 impacts because we haven't considered all of those other
 5 things.

6 You know what -- and finally, I appreciate the
 7 stories, the war stories and all that, but you know what,
 8 every time I jump in the water off the landing boat
 9 harbor -- I'm looking at you, brah.

10 UNIDENTIFIED SPEAKER: I'm looking at you, too.
 11 Thank you.

12 MR. WILLIAM AILA: I see the shells that never hit.
 13 I see the ones laying all on the ground over there, and
 14 that just tells me that they never clean up. So, it's your
 15 right to be proud. That's your generation that went
 16 through all of that, and all you guys that are veterans in
 17 here i mua to you guys. You have life experiences. I
 18 don't share those life experiences. I was never in the
 19 military. Never went to war, but I tell you what, I'm
 20 stuck cleaning that up. I'm the guy that got to call EOD
 21 for the Navy every time somebody find something, because
 22 it's dangerous to divers.

23 UNIDENTIFIED SPEAKER: Are you addressing the panel
 24 or are you addressing me? Can I ask you that question?

25 MR. WILLIAM AILA: I pau. I pau. I think I

1 addressed you and the panel.

2 (Applause)

1 MS. AMARAL: It's getting very late.
2 Sometimes when we get tired we get a little impatient with
3 one another. Ho'o manawa nui. Let's just take it a
4 little easy here.

5 The process is people are making comments
6 for the record. As much as possible we would ask you to
7 please address your comments for the record and not to
8 engage one another.

9 Again, also, as we pointed out from the
10 beginning we would ask that you try to limit your comments
11 to five minutes. I will remind you. You will ignore me,
12 some of you will. And I want to acknowledge those that
13 certainly stayed within the five minute limit. We now
14 call upon Leandra followed by Maile Hallums followed by
15 Colleen Tinoga. (Applause)

16 LEANDRA: Because of what just happened I'm
17 not going to look at any of you, but I want to just say
18 aloha na kupuna mai kakou. Aloha, people of Waianae.

19 AUDIENCE: Aloha.

20 LEANDRA: And hello, Colonel Anderson. My
21 name is Leandra. Ai nou an 'ahupua'a of kahana haile ke
22 Makua. She's my kuleana and all that is connected to her
23 spiritually which is all of kapa'a aina. I presume this
24 meeting is about expansion. While I want to get right to
25 the point, I don't agree with your expansion in any part

1 of kapa'a 'aina. First and most importantly, we all share
2 this 'aina, her highways and byways and the subculture
3 which is economics.

4 I wish to relay one of the many incidences
5 with our military that happened in Makua. A few days ago
6 our Army, about 15 infantrymen, came to Makua for "Make a
7 Difference Day."

8 I wish to speak of the comments they made
9 as they passed by my home and me and my neighbor and their
10 10 year-old son, which were very humiliating. He said,
11 "We should have napalmed them." I suppose they meant
12 Hawaiians because we were on her ancient lands.

13 If that's not enough, their vehicle got
14 stuck in the sand. Being stuck in the sand is not
15 illegal. But driving on the sand was a violation of state
16 law.

17 I want to ask what is our military saying
18 to our locals. When I approached their captain about
19 talking to his men, the captain replied, "Excuse them. At
20 least they were picking up the trash."

21 The reason I shared this is because
22 expansion means more military. More military means more
23 harassing incidents. I think they do it to me in Makua
24 and the people around me because they think nobody's
25 listening. You know it's way out in the middle of nowhere

1 and nobody sees anything. But I see and I've seen a lot.
2 Like that woman before me who left all that opala on your
3 table.

4 Forgive me, Uncle, but what I was impressed
5 about how quickly you cleaned it all up when it was on
6 your 'aina. (Applause) And I would just like to ask you
7 to maybe find ways when you put things on the land, you
8 know, go after your military exercises and you could clean
9 it up just that fast. I'll even go out and help you.

10 But I'm being terrorized by those who are
11 supposed to be protecting me from terrorism. So I have a
12 question. Are you going to -- this is for your cultural
13 impact part because I believe it's in the -- required by
14 the EIS to have a cultural impact.

15 So the statement is: Are you going to
16 brief your men on cultural values before they re-enter
17 communities? Because I think this will cut down on some
18 of the violence and -- on your people and our people
19 because I believe a lot of our people are just up to their
20 heads with everything that's happening.

21 We really want to be civil because we need
22 to all take care of each other. So I think if you put in
23 your cultural -- in your EIS that you should have cultural
24 values briefing before they enter society I think it will
25 work. Thank you. (Applause)

1 MR. CHANG: Thank you, Leandra. Maile
2 Hallums followed by Colleen Tinoga and Marion Kelly. Four
3 more please. Thank you for your patience and
4 perseverance.

5 MS. MAILE K. HALLUMS: I feel a little
6 intimidated by the eloquence of the speakers that went
7 before me. I wish I was first. But, my name is Maile.
8 I'm a Vietnam era vet. My sister is a vet. I lost a
9 brother in Korea and I lost a brother in Vietnam. My
10 mother had three sons.

11 When I was in the service my job was to
12 deploy manpower to Vietnam. In my ignorance I thought,
13 wow, I sure got an important job. I was locked behind a
14 door and I had guys standing out there protecting me
15 throughout my watch so I could send other brothers off to
16 war.

17 So actually all I'm saying is no, no, no.
18 Go do it somewhere else. For whatever reason, go do it
19 someplace but not in my backyard.

20 Right now I would ask you to relay to your
21 committee to sit down, start all over again. Except this
22 time take out the Apology Bill, Public Law 103-150. Read
23 it. Eat it. Follow it up with a St. Thomas Law Review.
24 Then do that EIS over again.

25 No. There are other solutions. But I got

1 a real question for you. I don't expect an answer. It's
2 a redundant question. Why would you want to do all that
3 training on a pin head? Hawaii is only this tiny. Why
4 us? Go do it somewhere else. And you probably would get
5 better results too. Nobody is going to spit at you, call
6 you names or whatever.

7 After you read the Apology Bill, then you
8 can understand I am now exercising my inherent sovereign
9 rights and responsibility to preserve my homeland. That
10 does not make me unpatriotic. That makes me a caring
11 parent. That makes me a responsible sovereign on this
12 land.

13 After all, what is our motto? "Ua mau ke
14 ia oka 'aina ika pono. The life of the land is preserved
15 in righteousness." So I'm not going to go over what
16 everybody else so eloquently has said to you tonight.
17 It's all encompassed in that.

18 My grandchildren, I don't want them to pay
19 the price and later say, "Well, how come nobody did
20 anything when it's too late to get these things out? When
21 it's too late?" Yeah. All of us here, all of us here,
22 Hawaiian, non-Hawaiian doesn't matter, this is our home.
23 And tonight all I've heard is "No". So I hope you take it
24 seriously. Now, just for the record I want to answer a
25 brother's question. One of the gentleman up here -- are

1 you still here? Anyway he asked why, why native Hawaiians
2 or the kids in the schools down here have the lowest test
3 scores.

4 Native Hawaiian. Whenever new things are
5 done or tests are done, scientists use white rats or white
6 mice or whatever it is. They use these animals to test
7 us. I would suggest to the brother, you take that white
8 mice and try to make him believe he's a horse and see what
9 happens. That's what's happening with us.

10 No. No. We have so many things we need to
11 take care of internally, making America work for all of
12 us. Making our nation. We are the nation. You are the
13 nation within it work. And it can be. I believe Pearl
14 Campbell mentioned earlier love is what it takes. Love is
15 what it takes. Go back to the drawing board. Do it
16 again.

17 I appreciate that you think we're so great.
18 I really like that, that you can give us a report that
19 took a year, two years to do and expect us to get it in
20 how many hours? Three? You raised our status. I thank
21 you for that. Thank you. (Applause)

22 MR. CHANG: Thank you. Colleen Tinoga
23 followed by Marion Kelly, followed by David Henkin.

24 MS. COLLEEN TINOGA: Hi. My name is
25 Colleen. And I just want to just say -- I just want to

1 say that I don't believe you should be running this
2 training in Hawai'i. And I believe that you should go
3 back to your committee and tell them Hawai'i is too small.
4 Hawai'i doesn't have any room. Hawai'i has too many
5 people.

6 I think you should tell them all, just not
7 pick Hawai'i. I think you should take all of those other
8 states that will have more land than we will ever have and
9 just go ahead and do it that way. That's all I have to
10 say. Thank you. (Applause)

11 MR. CHANG: Thank you. Marion Kelly.

12 DR. MARION KELLY: Very good. If I may I
13 would like to present just one point of Hawai'i's history
14 to give my position that the United States military must..
15 not...bring...their... Stryker Brigade to Hawai'i. The
16 track record that the United States military made in Makua
17 Valley just a few miles from here -- have you been here?

18 COLONEL ANDERSON: Yes, ma'am.

19 DR. MARION KELLY: You can see how clear it
20 is. There are no more houses. They've all been burned
21 down. The school has been burned down. The church was
22 burned down. Everything was burned down. The trees.

23 Makua Valley, people lived there. You
24 folks took it over 62 years ago, approximately, promising
25 to return it, which you never did.

1 Have they taken care of the valley? No.

2 They blow it up, Leave the residue, rubbish, unexploded
3 bombs. They're still sitting out there. Don't we know
4 it?

5 Another point I want to make is the
6 burnings, fires destroyed all the homes. Well, I've said
7 that. It's time that the military cleaned up Makua Valley
8 and returned it to the people. It is time, in deed, for
9 the U.S. military to clean up the mess and leave the
10 islands.

11 I've two more points that I want to make.
12 After arresting seven people because they had signs, at
13 last the struggle over the signs is over. The people with
14 signs won. Congratulations to all of you with signs.
15 (Applause)

16 Secondly, I think that the comment period
17 should be longer. Three volumes, three huge volumes,
18 people need time to figure out what these volumes are
19 trying to say and not saying it very well. And we have to
20 figure out how to address the problems that these volumes
21 raise.

22 Give us at least 120 days for responses.
23 I'd prefer 190 days. I'm not too smart about military
24 writings. Thank you very much. (Applause).

25 MR. CHANG: Thank you. David Henkin.

1 MR. DAVID HENKIN: Aloha kakou.

2 AUDIENCE: Aloha.

3 MR. DAVID HENKIN: My name is David Henkin.

4 I'm an attorney with Earthjustice. And I appreciate so
5 many people sticking around so long. I figured I'd go
6 towards the back because unlike the other speakers
7 tonight, I'm not from this part of the island, therefore
8 I do not have any -- I can't speak as somebody from
9 this part of island.

10 But I can speak as a resident of Hawai'i
11 and someone who is very concerned with the proposals that
12 the military is currently putting out.

13 Because of my legal background I'd
14 primarily like to focus on some of the legal deficiencies
15 of the draft EIS because sometimes through public comment
16 there is a lack of -- or at least agencies sometimes say
17 they don't really know what you're referring to. They
18 don't quite get the point.

19 I'll be primarily referring to the
20 Department of Defense Department of Army's Enviromental
21 Analysis of Army Actions Regulations at 32 CFR part 651.

22 But first I'd like to do something just to
23 give you a flavor of this EIS. I picked a random page of
24 acronyms just to give a flavor of what going through this
25 volume is like. I'll just read one of the pages:

1 "I3A, IAF, IA RII, IAV, IBCT, ICM,
2 ICRMP, IDG, IDP, IFR, Initial BCT, INRAMP, IOC, anyway,
3 you get the idea. It's extremely dense reading. I'd like
4 to refer to appendix E to part 150 - or 651 of the Army's NEPA Regulations.

5 And it says that the "likely environmental
6 impacts need to be written in simple, non-technical
7 language for the lay reader." This document fails
8 miserably on that account, which is why we would support
9 the requests that have been made for additional time for
10 people to go through this document.

11 Those of us who were around in April of
12 last year when the scoping process was happening, this is
13 like deja vu all over again. That was another instance in
14 which the Army took a look at its regulations and saw it
15 had a minimum period of time that must be provided for
16 scoping and that it what was initially offered to the public.

17 It took a lot of community sticking
18 together to insist on more time. And more time was
19 eventually given. That same type of penny wise, pound
20 foolish approach has been taken here. You have a mission
21 document.

22 I do think it has to be more than the 300
23 pages that the regulations provide for complex projects
24 because never before in this state have we seen a
25 proposal, such a large proposal for an increased military

1 presence presented to the public for consideration.

2 So I don't think it can be made any
3 shorter. In fact, in many respects, I think in order to
4 respond to the concerns and some of the issues raised it
5 needs to be longer.

6 But given the impossibility of making it
7 shorter, given the impossibility of making it more
8 comprehensible (because maybe I've been doing this too
9 long working with the military, but after a while other than
10 the acronyms, if they actually spelled out, everything out
11 in full this thing would be six times as long). So maybe
12 there do need to be all these acronyms. Maybe it does
13 need to be this long.

14 Being five times longer than what a complex
15 EIS is supposed to be, written in military acronym speak,
16 it's absolutely impossible to expect anyone to provide
17 rational commentary on this in the time provided.

18 I think the 120 days that OHA has
19 requested is generous to the military. A much longer
20 period of time would be appropriate.

21 In fact, switching to another point here,
22 this document is a good starting place for the discussion
23 but it is not adequate as a draft Environmental Impact
24 Statement.

25 The most telling problem with the document

1 is the complete lack of adequate alternatives analysis.

2 I'd like to turn back the clock because some of the people
3 here -- in fact most of the community here was with us
4 back in April 2002 at the scoping session.

5 We all sat through, I believe, about a four
6 hour scoping session to try and educate the Army regarding
7 the concerns the community has that this proposal raised
8 up.

9 And quoting again from your regulations
10 having to do with scoping -- this is Section 651.50D. I'm
11 sorry. That was not the section I wanted to refer to.
12 651.48(b)(2): "Proper scoping identifies reasonable
13 alternatives and the information needed for their
14 evaluation." I'll emphasize this last point. "Thereby
15 increasing public confidence in the Army decision-making
16 process."

17 In other words, the reason why we sat
18 through four hours of discussion during the scoping
19 sessions, was, among other things, to identify a range of
20 alternatives, reasonable range of alternative that the
21 Army should consider.

22 William Aila and others have emphasized --
23 I would just refer the Army back -- there was a court
24 reporter present -- there was a transcript. And speaker
25 after speaker emphasized the need to think a little bit

1 outside the box.

2 If we're going to be completely retooling
3 one of three brigades of this division -- if we are going
4 to be spending -- and the numbers I've heard range from
5 half a billion to 1 and a half billion dollars -- but in
6 any event, a substantial amount of money to create a new
7 fighting force, then you have to think about whether
8 forward deployment of this brigade in Hawai'i makes any
9 sense in an era where we no longer send our troops to the
10 battlefield by ship.

11 Yes, maybe it made sense at one point that
12 this really was a forward deployment. But we have one of
13 brigades on the mainland in Washington, Washington State
14 that is.

15 Presumably they're going to be able to get
16 to the battlefield the way that these troops will get to
17 the battlefield which is by airplane.

18 The testimony that was offered at the
19 scoping session last April was, if you want to move troops
20 safely to the battlefield, do you want to fly them in an
21 airplane over open ocean until they hit Asia?

22 Or do you want them to fly from Washington
23 State over our allies in Canada, to Alaska, over to our
24 Asian allies in Northwestern Asia -- Northeastern Asia,
25 excuse me.

1 It's that type of analysis that's
2 completely lacking from this document. If you take a look
3 at the executive summary -- and many people, frankly,
4 aren't going to make it out of the executive summary -- it
5 talks about alternatives analyzed and it gives a statement
6 that's fairly accurate.

7 It says, "The alternatives analyzed must
8 reasonably meet the purpose of the need for the action.
9 Alternatives must also be practical and feasible. That is
10 they must be capable of being implemented by the Army or
11 another agency, be technically feasible and not require a
12 commitment of resources they cannot practically be
13 obtained." All of that is accurate and fair.

14 What do we get in terms of a document? We
15 get "doing nothing" which I think all of us can agree the
16 Army is unlikely to conclude that's what it should do.

17 "Doing the preferred alternative" which is
18 the full-blown transformation with all the land
19 acquisition.

20 And "doing that, minus a little bit."
21 Those are the alternatives that are given. This is a
22 fatally flawed document because it does not -- it does not
23 analyze a reasonable range of alternatives.

24 One of the major purposes of an
25 Environmental Impact Statement -- and I'm referring again

1 to appendix E of your regulations, (a)(4). It says "EIS's
2 will serve as a means to assess environmental impacts of
3 proposed military actions rather than justifying
4 decisions."

5 Unfortunately, what we seem to have here is
6 the cart before the horse, a decision to do the
7 transformation in Hawai'i and then a document generated to
8 justify that decision. And that is simply not the way
9 that it's supposed to be done.

10 What you need to do is look at all
11 reasonable alternatives for accomplishing your goal. And
12 if you've determined that transformation through Stryker
13 Brigades is the goal and what you want to do, you actually
14 do need to do the hard work of considering your
15 alternatives. Different brigades in different locations
16 and what the relative advantages and disadvantages are.

17 If it's not in your programmatic EIS and if
18 it's not in this EIS, the question, quite simply, is where
19 is it?

20 NEPA requires nothing less than that
21 analysis so that you can make a decision based on all the
22 information rather than merely ratify a preordained
23 conclusion.

24 Now, this morning I read in the paper
25 something really disturbing. It had to do with the

1 arrests. And an Army spokesperson -- I forget who it
2 was -- responded to a media inquiry about the arrests and
3 they said, "Well, these troublemakers basically represent
4 a vocal minority. The silent majority of people in
5 Hawai'i support the transformation."

6 Now, this was a shocking statement to me
7 because I thought the purpose of the public comment period
8 of the draft EIS was to solicit public input so that you
9 would know what we all thought about it and what our
10 concerns were with it, about it.

11 Apparently you've already come to the
12 conclusion this is what we all want. And, again, one is
13 left asking the question, is this all a show? Is this all
14 a sham?

15 I hope it's not. You've had a lot of
16 people taking time out of their lives, staying late in the
17 evening on a worknight when they have families at home
18 waiting for them to return.

19 You owe us nothing less than a full
20 alternatives analysis. You owe us nothing less than an
21 adequate opportunity to provide feedback on the draft EIS.

22 Now, given the total lack of alternatives
23 analysis in this document, it would do a disservice to the
24 process and it would undermine the basic values of the
25 National Environmental Policy Act to go from this document

1 to a final. But, fortunately, we have right here in this
2 community examples of situations where the Army, I think
3 quite appropriately, has recognized the deficiency of its
4 NEPA documents and has gone back, taken another crack at
5 it. That's with the Makua documents which ended up in
6 court.

7 What you really need to do is take
8 public comment on this and use this as an expanded scoping
9 period.

10 Because, again, if you'll go back to the
11 critique that I offered back in April 2002, during the
12 scoping process, we didn't have adequate information to
13 provide feedback on what you were proposing because it was
14 one huge black box.

15 At the time that we held those meetings we
16 had no idea precisely what you were proposing to do at
17 all. You failed completely to fulfill the minimum
18 requirements of your regulations Section 651.50 where you
19 had to tell us really what you were thinking about doing.

20 Well, finally, in this document I feel that
21 we have a better sense of what you'd like to do. This now
22 provides a spring board for people to be able to provide
23 informed comments on what those concerns they have about
24 what really you propose to do.

25 It may have taken 18 months to actually

1 come up with that information which we were entitled to
2 back in 2002. But we're talking about a total overhaul, a
3 total transformation of the military as a fighting
4 machine. Perhaps that will take a little extra time.

5 But I would respectfully submit the Army need
6 not go completely back to the drawing board. But to truly
7 look back at the scoping comments that were given to you a
8 year and a half ago, analyze those alternatives, use this
9 time as an opportunity for people to point out some of the
10 gaps in analysis in this draft and come back with
11 something that really tells us what the alternatives are,
12 really tells us what the impacts are so that, hopefully,
13 you can make an informed decision based on public input,
14 and feedback rather than simply ratifying a decision that
15 you've made and expect us to just sort of play along with
16 the game.

17 I thank you for your time. And I hope to
18 have an opportunity to talk on a true draft EIS.
19 (Applause).

20 MR. CHANG: Thank you, Mr. Henkin. You
21 guys were counting. I did not miscount. But since I
22 mentioned that, there were a few -- there are a couple
23 more people who would like to provide testimony. So next
24 we have Vince Dodge followed by Andrew Cabebe.

25 MR. VINCE DODGE: Aloha kakou.

1 AUDIENCE: Aloha.

2 MR. VINCE DODGE: You know, it's always
3 good to be here. It's funny, because thinking about
4 getting here is like, oh, another meeting, another long,
5 long meeting. But it's always really good to be here.

6 I want to thank our Army for creating the
7 opportunity for us to come together again and really dig
8 deep, and share deep.

9 I haven't looked at the document yet. I've
10 been busy. It's going to take me at least 120 days to
11 begin to chew on that. But my primary -- I'd like to
12 share a couple of my primary concerns.

13 So the first is that my understanding is
14 that that type of document, the purpose of it is to give
15 us good information. From what I've heard here tonight --
16 and I really appreciate David Henkin taking time out of
17 his family's life to come down and share, is that this
18 document doesn't get anywhere near giving us good
19 information.

20 So I'd like to agree with David that it's a
21 step in the right direction but it falls far short. And
22 in order to make a good decision we need good information.
23 That's what we're being asked to do. That's part of this
24 scenario of the NEPA process.

25 You know, we're being -- we're being good

1 citizens. It's only fair to expect and demand of our Army
2 that they be the good neighbor, that they take the
3 responsibility of providing us information that is not
4 1500 pages and not full of language that a regular person
5 can't understand. Because we need to have the thoughts
6 and the mana'o of everybody to make a good decision.

7 Earlier -- or later this summer I got to
8 work at Makua Valley on the unexploded ordnance cleanup.
9 Seeing the Stryker force means 25 percent more munitions
10 used on the 'aina of Hawai'i, on our homeland and seeing
11 the tremendous amount of exploded and unexploded ordnance
12 that is contaminating just the little area that I got to
13 walk in in Makua Valley, greatly concerns me.

14 Because the military, unfortunately, has a
15 terrible record of desecrating and then putting up fences
16 and leaving lands that they had promised that they would
17 use and return.

18 Ed Decker, who ran the job at Makua, told
19 me, "I'm sorry, there's no way that this 'aina is ever
20 going to be cleaned. You're living a pipe dream if you
21 think that families are going to come in here and live
22 again."

23 I disagree with him. And I disagree with
24 the methodology that's used to clean that valley. There's
25 lots of proof in other places around the world that people

1 have figured out how to slowly clean their 'aina and live
2 with it, even though they continue to dig up bombs to this
3 very day, countries in Europe in particular that I'm a
4 little bit knowledgeable about.

5 But this is a military man. This is a man
6 with decades of experience as an explosive ordnance
7 expert. And so I can't brush off what he says. That the
8 that the valley is so contaminated.

9 They talk of Waikane Valley on the windward
10 side. We've been told that that 'aina can be cleaned but
11 it's expensive. The marines, they put up a fence and they
12 bought off as many people as they could until it was
13 convenient for them to again decide to go back in there
14 and train. Now it's not so dangerous. They can go in.
15 They want to do their jungle paintball training in there.

16 Just my short time span being aware of what
17 has gone on in this 'aina, what has been created by our
18 Army, our military, the record is terrible.

19 The burden of proof is on our Army to
20 demonstrate that they are trustworthy, that they will keep
21 their word, that their information is good, that this is
22 not a sham, that this is not an already done deal. That's
23 a pretty heavy burden of responsibility, you know.

24 So we're doing our best to be good
25 citizens, good stewards of the 'aina by holding our Army

1 accountable for that.

2 I'm helping to pay for this meeting tonight
3 because I know it's my tax dollars that are at work here
4 tonight. So I greatly appreciate this opportunity to
5 share and to come together.

6 And I know that, you know, you guys are
7 good people. We're all good people. The responsibility
8 is heavy. This is a serious, serious, serious issue.
9 It's not just about the Stryker Brigade in Hawai'i.

10 It has other ramifications which I think
11 have been well spoken to this evening.

12 So, again, I request very strongly that our
13 Army really take these comments seriously tonight and, you
14 know, come back with a way of again making this an
15 inclusive, reasonable process so that the feedback and the
16 working together can happen to a greater, greater degree.
17 Mahalo. (Applause).

18 MR. CHANG: That you, Mr. Dodge. Can I
19 suggest we take a moment to give the videographer a chance
20 to change tape. Two minutes. Mr. Cabebe followed by Mr.
21 Keliikoa-Kamai.

22 (Recess held in place)

23 MR. ANDREW CABEBE: Aloha, everybody.

24 AUDIENCE: Aloha.

25 MR. ANDREW CABEBE: First of all, I'd like

1 to thank Akua for bringing me here. I just pray that your
2 hearts are open, your minds are open and the truth comes
3 out tonight.

4 What I seen the last two nights not too
5 pono, not too good. You know, I came here with the
6 intensions of just watching. But I got involved with the
7 heckling earlier tonight. And I'm sorry for that. But
8 our Hawaiian culture tells us that ho'oponopono is the
9 way. Ho'oponopono is talking everything out.

10 So, you know, let's get up here, be honest
11 and true to each other. You know. We need -- we are in a
12 bad situation. You look at what's going on today in this
13 world.

14 How can we let it go at that? You know,
15 you come to Hawai'i and you take our aloha spirit, you
16 turn it upside down and we don't know what is what, what
17 is wrong, what is good, what is bad. We all grabbing to
18 find out.

19 I just pray that your heart tells you what
20 is right, what is wrong. And when the answer comes to
21 you, act on it, you know. Your own people, your religious
22 people are telling you something. Listen.

23 Your own people, I watch people who are not
24 Hawaiians come up here and they sound more Hawaiians than
25 any of the locals that live in Hawai'i.

1 I want to live with those people. I want
2 to live with people like that. We have a chance to do
3 that in Hawai'i.
4 We have this thing that we call aloha.
5 It's not just for us. We need to share it with everybody.
6 But something keeps holding us back.
7 What would have been if our queen, if our
8 government lived today? What kind of spirit would we live
9 in today? Would it be aloha or would it be war? We'll
10 never know. But I know one thing, I believe in the aloha
11 spirit.
12 And my family lives the aloha spirit. You
13 can take it or leave it. And I truly feel sorry for you.
14 I pray that you somehow get back to that, get back to it
15 and share it. Don't hold it all in. Share it.
16 I don't know about you guys but I've had
17 enough of all this lead and bullets. Let's start planting
18 flowers, food so we can live and be happy instead of
19 trying to shoot each other.
20 Fill your guns with seeds that can flourish
21 the land. But it's just how I feel. And me and my
22 family, we going live that way.
23 I seen it all. I had a chance to walk away
24 from this aloha spirit. And all of you, you guys that
25 talked me into walking away from the aloha spirit, you

1 know aloha is the way. That's the way I went.
2 I know just by listening tonight I just
3 know that some of you got it. And no matter where we go
4 in this world there always going to be a division.
5 How we handle that division the only way we
6 know, aloha. We get up, we fight. We yell at each other.
7 But when we walk out of this place we all friends.
8 Too bad we cannot just do that the whole
9 time no matter where we go. And I pray that we going that
10 way, you know.
11 Like I said, we have, as Hawaiians we need
12 to stand up and go to where our hearts tells us.
13 Independence, sovereignty, We have a chance for it.
14 Out of all the people in this world this
15 Hawaiian nation has a chance. Let it go. Let it
16 flourish. Let it come out. If we can all feel for one
17 another what more could we ask for?
18 You know, I heard of all the wrongs that
19 going on. You know? We could probably fill this whole
20 parking lot with all that stuff that was on the table,
21 many stories high, all in the ocean, on the land. And
22 going bring some more in here? You think about it.
23 We have a very unique chance to just be a
24 part of something that is way greater than what we going
25 through right now. I came here tonight because I seen my

1 kupunas. I'd rather just stay home watch all you guys.

2 But what you do to my kupunas, if you believe that's

3 right, man, I don't want to be a part of this. I don't.

4 Again, I sorry for my appearance. Sorry

5 for the heckling. I wanted to just leave but I heard too

6 much, you know. We worry about little things and there's

7 other things that are far greater that we need to do.

8 How do we turn it? Can we walk out of our

9 houses and shake one another's hands and say, "Well, I

10 love you, aloha"?

11 Every day, aloha. Walk out of your houses,

12 "aloha". Everybody you see "aloha." Don't be afraid to

13 say "I love you brah. you're my brother. You're my

14 sister." That's how I would start.

15 Pilikia is, you know -- why would we even

16 go that way? I'd rather be happy, you know, looking at

17 one another with a smile, not with an upside down smile, a

18 frown.

19 If you believe in the aloha spirit get out

20 there, get out of your house "aloha, aloha, aloha." And I

21 hope you never stop. Again, sorry for heckling that

22 gentleman by calling him -- you know, you know who you

23 are.

24 And when you can apologize to the kupunas

25 that you arrested, when you can apologize to them and --

1 do the right thing. What happened the last two nights,
2 don't let it happen again. It's not the way. How can you
3 guys do that? That should already tell you.

4 I'm glad to be a part of this. I hope to
5 be more vocal. And I thank you for all your mana'o, all
6 your understanding, all your -- all those, you brought me
7 out here. You made me come out here. I seen stuff that,
8 you know -- you should know that I shouldn't even be
9 telling you this. What you did is not right.

10 Right the wrong. Start tonight and you
11 will feel my heart. You guys know what happened the last
12 two nights. It's not aloha.

13 I love aloha and I say no guns, no war, no
14 more Stryker. Let's fill those guns up with good seeds.
15 Let's plant some edible stuff. Let's live. I'd rather
16 live. How about you? We have a chance. Don't waste it.

17 For me Hawai'i will always be, no matter
18 what, you cannot take it out of me. You're not going to
19 take that aloha spirit out of me tonight. It's even
20 stronger.

21 I pray that God blesses you, keep you and
22 take you home safely. I thank you for this night. I
23 thank God for all that He gives us. It's all by Him that
24 we get, whoever your God is. If you don't have one, find
25 a way. Read your books. No go pick up one gun. Get rid

1 of the guns. We don't need the guns in Hawai'i in our

2 streets, on our land. Start here. Start here in Hawai'i.

3 Let us share that aloha. Start here.

4 We all here because we love this place. We

5 all come, every one of you because you feel the -- this

6 undescrivable homey feeling that you cannot even explain.

7 Don't figure it out. Don't fry to figure

8 it out. Just accept it and try to bring it to your

9 neighborhood. You come here, and you filled with aloha

10 when you go back home you get all the aloha, a couple days

11 later. But, you know, this is ours. All of this

12 everything is ours. And it's up to us. Thank you.

13 (Applause).

14 MR. CHANG: Thank you. Kapua

15 Keliikoa-Kamai.

16 MS. KAPUA KELIIKOA-KAMAI: Aloha.

17 AUDIENCE: Aloha.

18 MS. KAPUA KELIIKOA-KAMAI: I'm so glad that

19 each and every one of you are still here. I'm so glad

20 that there were so many people that were here today. But

21 this is basically my statement. 'A'ole military

22 expansion.

23 I am so happy when I come to these

24 community meetings because I learn so much more from being

25 here than before I walked in the door. The newspaper can

1 only give us so much information. Because newspapers,

2 they have a tendency to give their piece of information.

3 These open forums allow community members
4 which is not "a minority few" allow each and every one of
5 us community members to speak what our mana'o is. And our
6 mana'o is that Hawai'i has been a place of destruction and
7 desecration that has been inflicted upon this 'aina by the
8 United States Government of America.

9 So not only have we been inflicted upon now
10 were being asked -- not even asked -- we're being informed
11 through this democratic process that now our 'aina is
12 going to be used to desecrate other 'aina. That's against
13 us.

14 That's not the Hawaiian way. That is not
15 the aloha that I was raised with. That's not the aloha
16 that my ancestors were raised with. We had so much aloha
17 that we invited you folks, all nationalities, not just na
18 poe Haole, all nationalities, because we are all here in
19 Hawai'i.

20 We Hawaiians, we still have aloha. If you
21 love us, we love you. If you don't love us we still love
22 you besides the way you that you are, besides who you are.
23 Because that's our nature to accept you as you are and try
24 to be as loving as we can so that we can impose our values
25 which is all from God, ke Akua, the one and only God, that

1 we can share Him with you, share the aloha that we have.

2 I come and I think, okay, we have a
3 democratic process. But my knowledge, my western training
4 tells me that it's a show from what I've heard this
5 evening from those experienced people who know how to read
6 these documents. They lead me -- they confirm my own
7 thoughts.

8 Now, so I ask you -- and I'm just going to
9 make it short and simple -- to go ahead, let your upper
10 echelons know that the people of Hawai'i do not support
11 the Stryker Brigade.

12 We do not support using our 'aina for
13 America's purposes because we are still a sovereign
14 people.

15 So one day we will become our own sovereign
16 people. And we hope, as previous speakers have said, that
17 you folks will join us because you have -- you have
18 acclimated yourselves to the people of this 'aina to the
19 way that our hearts are.

20 Sometimes we don't express it properly.
21 But because our hearts are bleeding and because we feel
22 that we have been so infringed upon, so violated that
23 sometimes we'll do something that is not pono. And we all
24 have to admit it.

25 Sometimes we do that. We behave that way.

1 So we have to think about what caused it, how can we
2 rectify it and let's move on. The way that we the people
3 of Hawai'i want to move on is by not using us as an
4 instrument of war, by not using our land for war.

5 We are a loving people. We support
6 America. We don't want our American troops to be hurt.
7 We do support their need for training, their need for
8 technological upgrades. We support that. But we don't
9 support being used by America in that way. Mahalo.
10 (Applause.)

11 MR. CHANG: Thank you, all. It's been a
12 very long night. We could not have had it without your
13 cooperation, your aloha. May I ask the Colonel if he has
14 any words.

15 COLONEL ANDERSON: I want to personally
16 thank everybody, not only those that are still here
17 tonight but those who have been here throughout the
18 evening.

19 All of your comments, written and oral,
20 will be used as we continue on with this process of
21 developing and striving towards our Final Environmental
22 Impact Statement.

23 For those of you who were not able to give
24 oral testimony this evening, we will continue to accept
25 written comments throughout the comment period.

1 Your comments this evening are important to
2 us. Your comments this evening will be incorporated, in
3 particular the message this evening about extending and
4 considering extension of the comment period. That's
5 important to us and we will work at it very, very hard.

6 But I do genuinely want to thank you all
7 personally for being here tonight, and for the way in
8 which we all conducted this very, very good meeting
9 tonight.

10 I want to thank you personally for the way
11 this was all done, from the bottom of my heart. Thank you
12 very much. (Applause)

13 MR. CHANG: All right. Many strong voices
14 have been heard tonight. We thank you for your exercising
15 your citizenship in doing so, extending the courtesy to
16 give these voices.

17 We hope that you are safe and careful on
18 your way home. May I ask if Uncle Walter Kamana would
19 give the closing pule.

20 MR. WALTER KAMANA: We came through a long
21 night, right? So now we give Akua a thank you. So we
22 will say the grace. For the Hawaiian people, please hold
23 the hands together and accept these prayers.

24 So with the other side, respect the prayers
25 the same And make the circle. The circle means a lot to

1 us. So I ask you to hold hands and think about your next

2 meal. Are you all holding hands?

3 Father in heaven, I come before You. I

4 call You the greatest power You can share. Please grant

5 us this power. Please grant peace among each other around

6 the nations that fight to hold peace to one unity, to one

7 accord.

8 Father, I ask You, kokua. Kokua in any way

9 you can. Kokua the spirits of the land. Kokua the

10 spirits of protecting us. Kokua the 'aina. Please kokua

11 for peace. Let us share our problems.

12 Let's bring them into one. Let us bring

13 them inherent to us. Let us have peace among each other.

14 As we always say, yes, we want the peace. Can we share

15 with each other.

16 Father, I ask You, bless us. Bless the

17 people going home tonight. Bless the people on the

18 byways. Bless them that came here to speak. Bless those

19 with a little bit huhu to cover them also. As I ask You,

20 please remember them, the Hawaiian people.

21 Remember them and help them. Help them

22 with their rights. For we cannot be shared one without

23 the other. So we share the spirits of both sides. Let

24 compromise be in Your name and Your way. Let these things

25 happen in Your hand. This 'aina is Yours. You created

1 it. You made it. Protect it. In the name of the Son of
2 God, Amen.

3 MR. CHANG: Thank you, everyone.

1 PROCEEDINGS

2 MS. AMARAL: My name is Annelle Amaral.

3 I'm going to be one of the facilitators this evening.

4 I'll introduce the rest of the people gathered. Before we

5 begin, we have asked Kunani Nihipali if he would open this

6 gathering with a pule and has kindly consented to do so.

7 Aloha, Kunani.

8 MR. KUNANI NIHIPALI: Aloha.

9 AUDIENCE: Aloha.

10 MR. KUNANI NIHIPALI: I'd like those that

11 know this pule e ho'omai, join me, welcome our kupuna, our

12 ancestors this evening to give us the strength, the

13 knowledge to be able to carry on our mana'o that we have

14 to exchange and share. Pule lokahi.

15 (Chanting phonetic) E ho'omaikai ke mai ona

16 mai e. O na'amea u na no iao on na mele. E ho'omai. E

17 ho'omai. E ho'omai i e. E ho'omai ka ike mai ona mai e.

18 O na'amea u na no iao o na mele. E ho'omai. E ho'omai.

19 E ho'omai I e.

20 (Pule in Hawaiian)

21 MS. AMARAL: I'd like to call upon Colonel

22 David Anderson, the Garrison Commander of the U.S. Army,

23 to make some welcoming and opening remarks. Colonel

24 Anderson.

25 COLONEL ANDERSON: Thank you, Annelle.

1 Aloha and good evening. As Annelle said, I'm Colonel
2 David Anderson, Garrison Commander for U.S. Army Hawai'i.

3 On behalf of Major General Eric Olsen,
4 Commanding General of the 25th Infantry Division, and U.S.
5 Army Hawai'i, I would like to welcome you to tonight's
6 community meeting on the Draft Environmental Impact
7 Statement transformation from the 2nd Brigade, 25th
8 Infantry Division to the Stryker Brigade Combat Team.

9 Tonight we're here to listen to your
10 concerns and gather your comments on our Draft
11 Environmental Impact Statement. The facilitators, Annelle
12 and her team, will help us with this process this evening.

13 But I want to tell you that the comments
14 that you make tonight that we caption, that we address in
15 the Final Environmental Impact Statement are what's
16 important tonight.

17 It's encouraging that we have this large
18 crowd because those comments are important to make the
19 document that much better and take everything into
20 consideration. That's why we're here tonight, to solicit
21 those comments so we can answer those and address those in
22 our Final Environmental Impact Statement.

23 Again, your role is to provide additional
24 input on the environmental, cultural or any other concerns
25 you believe should be addressed, analyzed in our Final

1 Environmental Impact Statement. The EIS is the most
2 comprehensive document that can be prepared under the
3 National Environmental Policy Act.

4 And I know everyone is anxious for this
5 meeting to begin. So without further delay, I'll turn the
6 time back to Annelle. Thank you very much.

7 MS. AMARAL: Seated at the table here in
8 the front are some people that I need to introduce.
9 Farthest away from me but closest to you is Mr. Ron Borne,
10 the Army transformation manager. Next to Colonel Anderson
11 is Mark Katkow who is with the Office of the Judge
12 Advocate.

13 Also seated in the audience off to my right
14 are members of the resource team that had helped to put
15 together the Environmental Impact Statement.

16 We hope that you took advantage of their
17 presence and had a chance to talk to them during the open
18 house period to ask some specific questions.

19 The second half of this meeting, then, is
20 the public comment period. That's the period that we're
21 in right now. The purpose of this is for the public to be
22 able to respond or provide comments on the Draft
23 Environmental Impact Statement for the record.

24 If you wish to use your comment period to
25 ask questions, that may be somewhat problematic because

1 during this period we are taking your comments and
2 entering them into the record.

3 What we can do, as I understand it, is if
4 your questions are within the context of the EIS it could
5 perhaps be answered in the Final EIS. If it is outside of
6 the purview of the EIS, then you may not see an answer
7 coming up at all about it. If it's something that can be
8 answered very quickly, then I suppose we can try to deal
9 with that.

10 But for the most part what we're doing now
11 is taking comment from the public. There are different
12 ways to take comment. This will be the predominant way.
13 That is for you to come to the microphone when you're
14 called. I have cards that have been handed to me based
15 upon the order in which you registered to speak at the
16 table outside.

17 What we'll do is we will call you in the
18 order in which you registered. I'll call three names so
19 you know that your name is coming up and you can be
20 prepared to come up.

21 While you are giving comment the court
22 stenographs are here and they are taking a verbatim
23 transcript to what is being said. Because the system
24 here, the sound system, does not link directly to their
25 tape recorders, they're picking up the same sound that we

1 all hear. It's not linked. So extraneous noise is going
2 to get in the way of them hearing. What you will see the
3 facilitators do is ask us to keep the noise level down.

4 If you've got some conversations you want
5 to carry on, we would encourage you take it into the
6 hallway so that the court reporter can hear clearly and to
7 make note of what is being said.

8 For those of you that either want to leave
9 early and cannot wait until you are called or simply do
10 not feel comfortable about giving comment here at this
11 podium, a court reporter is located behind that white
12 screen and she is available to take your comment all
13 evening long. That comment will also go into the record.

14 If you have written statements that can be
15 entered directly in the record, you do not need to stand
16 here and read it off. We'd suggest to you try to
17 summarize your comment rather than read 10 pages.

18 We ask your kokua to please try to use only
19 five minutes when you are making comment this evening. We
20 will remind you when your time is running out.

21 With us this evening is Puakea Nogelmeier
22 who is here to assist those people who wish to give their
23 testimony in Hawaiian. So Puakea is going to come up and
24 explain this. Aloha.

25 MR. PUAKEA NOGELMEIER: Aloha kakou.

1 (Speaking in Hawaiian)

2 This evening anyone is encouraged and
3 supported in speaking Hawaiian as part of their testimony.
4 You can do that either to speak and translate for
5 yourself. You can choose to speak in Hawaiian and not
6 have it translated at this meeting, although it will be
7 translated in the record.

8 Or, if you would like assistance with
9 translation you can do the speaking and arrange with us to
10 do the translation here in the meeting. That can be done
11 here at the podium. It can also be done privately with
12 the stenographer at the side. Feel free to make use of
13 that service. Oe hola.

14 MS. AMARAL: Mahalo. This evening we have
15 three facilitators and you'll see us spelling one another.
16 With us this evening is Karen Aka and also Louis Chang.
17 The three of us will take turns as we go through the
18 evening.

19 What the facilitators do is we monitor for
20 decorum or timing and just for the process. We try to ask
21 you to keep your testimony to five minutes. We remind you
22 as you near the end of five minutes.

23 Just some basic ground rules. I think most
24 of us know these rules. We live them anyway. First, that
25 we ask that we treat one another with respect. When

1 someone is up here speaking, then we give that person all
2 of our attention. We do not interrupt them. We don't
3 expect that everyone in this room agrees with one
4 another's points of view. But what we do expect is that
5 we treat everyone here with aloha. That's what we're
6 going to be doing.

7 We ask also that you monitor yourself.
8 There is no need for vulgar language or gestures. So we
9 ask that you restrain yourself. We will remind you of
10 that.

11 For those of you that have cell phones, we
12 ask that you put it on silence because it is often
13 difficult to discern words of speakers when we hear phones
14 ringing.

15 If there is any disturbance this evening,
16 the facilitators reserve the right to call for a break or
17 a time out in order to settle matters and calm things down
18 before we begin the meeting again.

19 The purpose of facilitated discussions is
20 to allow for a neutral, safe environment where all voices
21 can be heard, where all people are treated equally and
22 fairly.

23 The facilitators work very hard to maintain
24 that neutrality and assure all speakers the abilities to
25 share what is in their heart and what is in their mind

1 regardless of their position. We ask that you assist us
2 in that way.

3 We will begin now. I'll call the first
4 three names of the people who have signed up to speak.
5 The first is Mr. Bud Ebel, the second Mr. Ed Treschuk and
6 the third is Karla Kral. I apologize in advance for
7 mangling your names. Mr. Ebel.

8 MR. BUD EBEL: Thank you for the
9 opportunity to address this meeting and the board in
10 particular. Appreciate your help.

11 The issue, in my opinion, is to make it as
12 safe as possible for the soldiers when they're doing a
13 horrendous job. I feel the Stryker Brigade will be a
14 major improvement. It is a big step between body armor
15 and a tank. It will protect our soldiers. It will make
16 them more efficient. And I am very concerned about that.

17 I haven't got a lot to say. Most
18 everything I've had to say I've already registered with --
19 in documentation.

20 But I do feel the need to thank our
21 servicemen and women. Heck, I got a niece in the Marines.
22 I can't believe that little kid. She ain't a little kid
23 anymore. She's in the Marines. She can't wait to get to
24 Iraq.

25 The point is these people are doing a

1 marvelous job and they need support. They definitely are
2 due our utmost respect and thanks. I do sincerely thank
3 you personally and figuratively. What I say to you
4 applies to every soldier under your command and every
5 person in the United States military. I thank you for
6 your time. I'm not going to delay you here.

7 I did have one thing. I heard certain
8 propellants in the rocket propelled grenades, whatever,
9 benzene, might be cancer causing. Apparently that's in
10 the thing. I hope you don't ban that because my car won't
11 run on air. I got to have gas. It's in gas.

12 If somehow or another they get benzene out
13 of this world, I guess I'll be going back to a Stanley
14 Steamer. I don't really want to but that is the world we
15 live in.

16 But I do thank you. I appreciate your time
17 and I appreciate everyone coming. It's a wonderful group.
18 And I thank you for your decorum.

19 MS. AMARAL: Thank you. Mr. Ed Treschuk
20 followed by Karla Kral, followed by Dennis Kanahele.

21 MR. ED TRUSCHUK: Hello and aloha.

22 AUDIENCE: Aloha.

23 MR. ED TRUSCHUK: My name is Ed Treschuk.

24 I'm here tonight with my wife. I'm here tonight to speak
25 in favor in with respect for the warriors that fight for

1 our country. I've lived in Hawai'i for 33 years. My wife
2 and I have raised three children, now one grandson. We
3 have tried very hard to raise them to be warriors.

4 I'm a Marine Corps veteran, served in the
5 Marine Corps Air Wing. We were in a VMCJ squadron which
6 is a reconnaissance squadron. Basically we flew high
7 speed, low altitude F-4's and we plotted the bombing runs
8 for the following day.

9 As I said, I'm here to support the warriors
10 among us, warriors who are willing to stand and fight what
11 they believe to be right, stand up, take the risk against
12 threats to their family, our land, and our way of life,
13 those willing to fight for democracy, freedom and the
14 right for our people to be heard by our government.

15 I was shocked to watch the TV news last
16 week when we learned that the invited guests at these
17 hearings were arrested for the crime of bringing posters.

18 I was shocked as the illusion of democracy
19 was stripped naked, that bare naked truth was military and
20 police power being ordered against people demanding their
21 basic rights simply to be heard to speak out for our
22 children's future.

23 It was a shameful display of
24 anti-democracy. One poster I saw seemed to sum up the
25 whole event. That poster was hastily penned in blue

1 marker and read, "You have the guns and tanks. We have
2 only signs. Who is the real threat?"

3 To those warriors, those everyday people
4 who have come to these hearings to speak out to stop this
5 Stryker Brigade, I applaud your efforts and I salute you.
6 (Applause)

7 We're here tonight to give testimony on the
8 wisdom of bringing bigger and better guns to Hawai'i.
9 Many of you have spoken on the impact of the land,
10 potential health hazards and the offensive nature of the
11 Stryker weapon.

12 I want to speak to points being made by
13 other veterans, those who have spoken in favor of
14 supporting the government and the military as a sensitive,
15 compassionate and an organization that will take care of
16 their own.

17 In doing so I want to take a look at how
18 the government is taking care of veterans, and how we
19 might expect further government promises to end up.
20 Bottom line is can we trust them?

21 As I said I was in the Marine Corps Air
22 Wing but many of my boot camp buddies were O300 grunts.
23 Many of them went direct to advance infantry training, two
24 weeks home on leave and straight to combat in Vietnam.
25 The average age of the Vietnam war combatant was 19, young

1 and inexperienced.

2 One such young man was my friend Leland.

3 Leland had the misfortune to step on a land mine that blew
4 up both his legs up to his groin.

5 He was Medevac'd, rehabbed and discharged.

6 Leland joined thousands of others in his struggle for
7 decent medical care. And as he watched the country around
8 him become stronger and stronger in the anti-war efforts
9 he decided that he had something to say.

10 Leland had one of those wheel-arounds which
11 is basically a block of wood with four little wheels on
12 the bottom. He could sit on that and wheel himself
13 around. He decided he would dress up, dress in his Marine
14 Corps blues, dress blues, complete with medals.

15 He'd go down to the Anaheim recruiting
16 station and sit in front of the station. Didn't hold a
17 poster, didn't shout, didn't chant, didn't do a thing,
18 just sat there. For this he was arrested day after day
19 after day for trespassing. Does that sound familiar?

20 The rule is that we all have freedom to
21 speak as long as we don't reveal any of the broken
22 promises.

23 Tonight is about broken promises. Leland's
24 story is only the beginning. Thousands of returning vets
25 were denied VA benefits and services because the U.S.

1 refused to acknowledge medical problems as service-related
2 disabilities. Troops were repeatedly subjected to sprays
3 of poisonous herbicides such as Agent Orange and later
4 developed horrible disease, including Non-Hodgkin's
5 Lymphoma, soft tissue sarcoma, Hodgkin's disease,
6 myelomas, cancer, prostate cancer, neuropathy, and spinal
7 bifida in children born to exposed vets.

8 For more than 15 years these vets were
9 denied treatment. They eventually had to sue the
10 government to get the Agent Orange illnesses recognized
11 and are still struggling today as they die to get
12 benefits.

13 Thousands upon thousands of young men, boys
14 sent off to war, returned battle scarred and shell shocked
15 haunted by the nightmares of what they saw, what they did
16 in Vietnam, only to be told there was no such illness as
17 Post-Vietnam Stress Syndrome.

18 Sadly, many of these veterans could never
19 find their way home. As many as 20,000 Vietnam veterans
20 took their own lives after returning home, tragically
21 another broken promise.

22 The U.S. Government has been a vocal
23 advocate of international arms controls and treaties. The
24 nations of the world have worked hard to outlaw any
25 weapons of mass destruction.

1 The nations of the world have agreed that
2 biological and chemical weapons are illegal, forbidden
3 weapons.

4 The U.S. Government has violated this
5 agreement at least three times in the last 12 years. 1991
6 in the Gulf War, '99 in Kosovo and recent months in Iraq.

7 Depleted uranium is used in these because
8 of its ability to get through the armor. It aerosols upon
9 explosion, creates radioactive blasts. Depleted uranium
10 is a weapon that kills and keeps on killing and killing.

11 The cancer rate in Iraq following the 1991
12 war has increased 700 percent. Our servicemen and women
13 were exposed to this as well. The official government
14 response has been: There is no service-related disability
15 for this exposure.

16 Sixty-seven percent of Gulf War vets have
17 some sort of illness related to this.

18 Gulf War female veterans have a 300 percent
19 higher incidence of having birth defects with their
20 children.

21 President Bush just asked for 87 billion
22 for more weapons. At this time disabled vets have been
23 told they may no longer be eligible for service-extended
24 health care, huge cutbacks to veterans health benefits,
25 slash in medical benefits, closing hospitals.

1 I'll read you a quick quote from a very
2 radical left wing newspaper. It reads, "The knives are
3 out for Secretary Donald Rumsfeld. With the steady drip
4 of American blood in Iraq generating a hemorrhage of
5 public confidence, and President Bush at home, it isn't
6 surprising that the man who confidently predicted victory
7 in Iraq should find himself under assault."

8 This is an editorial piece this week about
9 Donald Rumsfeld from "The Army Times". (Applause)

10 The front page article this week in all
11 four of the newspapers reads, "An act of betrayal," very
12 small, "Act of betrayal. War on benefits. the DOD wants
13 to cut -- wants to slash your pay, close your schools and
14 close the commissaries."

15 For every Jessica Lynch, the wounded
16 soldier who returned to a hero's welcome and the book and
17 movie deal, there's a Shoshana Johnson. Johnson was shot
18 in both legs, held prisoner in Iraq for 22 days, received
19 30 percent disability or about 700 a month less than
20 Jessica. Johnson is black. Lynch is white. The Johnson
21 family thinks that's the reason why.

22 Again we are asking if we can believe the
23 U.S. Government will keep its promise to respect the land.
24 Given the history, we simply do not believe this to be
25 true.

1 We ask you tonight to reject the Stryker
2 project, to say no to more military expansion, and to
3 bring our sons and daughters home now. Thank you.

4 (Applause)

5 MS. AMARAL: Karla Kral followed by Dennis
6 Kanahele followed by Kyle Kajihiro. (Applause)

7 MS. KARLA KRAL: Thank you. Good evening.
8 I'm here as a member of the Hawai'i community, as a member
9 of the community at large of humanity. My credential is
10 since 1968 I have been an advocate for humanity versus the
11 military industrial complex.

12 Starting in regard to the Stryker situation
13 I was able to only briefly review the EIS. I notice that
14 in Section 4.2 regarding the land use recreation on page
15 4-5 there were mentions made to the amount of dust which
16 has been noted here on the posters that was being
17 generated as a result of this -- will be generated as a
18 result of the Stryker activity and then the restricted
19 access during fires.

20 I think we know that restricted access
21 during fires can be pretty lethal in the light of Makua
22 and the way things have gone there lately.

23 Also there was reference made to the
24 Honouliuli preserve and the various encroachments that
25 would be taking place there. Basically there would be a

1 citizens advisory board, which I think many of us know in
2 regard to those situations are too little too late when
3 they once come together.

4 There is a reference to the loss of
5 agricultural land. At this time when Hawai'i is trying to
6 develop itself to regain its sustainability, to removing
7 land from agriculture use, it's bad enough it's gone into
8 all sorts of housing developments we have seen everywhere,
9 but to have it go into military use from agriculture use
10 is like a knife to the heart of people who love the land
11 no matter what persuasion they might be, haole, Hawaiian
12 or whatever.

13 I also appreciate the work, the hard and
14 long work of the Tetra Tech, Inc. folks for putting the EIS
15 together. It was obvious from my review, my brief review
16 of the EIS that it pretty much -- I think there could be
17 summarized in one part where it said, "No action
18 alternative" which meant to me, as I spoke with some of
19 the folks from Tetra, is that they started with a mission
20 from the military to come up with a certain answer
21 regarding this EIS. And that answer was predetermined.
22 It was to put the Stryker Brigade in Hawai'i.

23 My questions in regard to this are: Why
24 not locate and train in a larger uninhabited area such as
25 Utah, New Mexico, Nevada where the climate and the terrain

1 and conditions are more comparable to potential locations

2 to where this Stryker Brigade is to be deployed?

3 Then there is the fact that this does

4 happen to be the smallest state in the whole of the United

5 States of America. Yet we seem to have the greatest of

6 military investments all over the land, all over the

7 islands.

8 In regard to the fact that now in just a

9 couple of days Kaho'olawe will be being returned to the

10 state, the military is more than happy to grab some land

11 with the other hand that it gives from giving and taking.

12 So my question's about relocation. I

13 didn't see it addressed anywhere in the EIS. Please

14 forgive my ignorance if they have already been addressed

15 in terms of other actual geographic location and why

16 Hawai'i would be such a preferable location considering

17 all the other possibilities.

18 And my last closing comment is the fact

19 that this land does not belong to the military. It does

20 not belong to the United States of America. It belongs to

21 the kanaka ma'oli. (Loud applause).

22 MS. AMARAL: Mahalo. Dennis Kanahele

23 followed by Kyle Kajihiro followed by Kunani Nihipali.

24 MR. DENNIS KANAHELE: Aloha. Good evening.

25 AUDIENCE: Aloha.

1 MR. DENNIS KANAHELE: You know for the last
2 week I was watching the news and hearing from people that
3 was involved in the protest as well as these hearings. I
4 think the most important thing for me that nobody got hurt
5 except for in the parking.

6 I was really, really concerned about how
7 our people were being treated for holding signs and
8 protesting.

9 At the same time we have to be aware of the
10 situation we live in for what's going on with Hawaiian
11 rights and entitlements and all that.

12 I'm totally against the Stryker Brigade
13 being here. I'm totally against the United States of
14 America being here. And before I go on I want to take
15 this time to at least go about 30 seconds in silence
16 because today is the 15th anniversary of the genocide
17 convention, Genocide Act.

18 November 4, 1998 United States of America
19 finally signed the Genocide Act, better known as the
20 Proxmire Act. It's important because -- I'm going to be
21 real brief on this -- it's not about the land and the
22 water and destruction to me that you're doing to it now.
23 It's about the belligerent occupation that you folks are
24 in right now.

25 You cannot forget that you're only guests

1 over here. You don't live here. You guy's only guests.

2 A grave injustice happened to our people. It's bigger
3 than all this that's going on for tonight. You guys got
4 to make right with us, with the Hawaiian people.

5 We might not have 'em all together. We
6 might not be together as one. But we like our own
7 government. We want our own government. We want the same
8 treatment as you gave Afghanistan, as you gave Iraq.

9 You guys blind to that. And you always
10 escape by saying, "Well, Washington D.C. going take care.
11 It's up to the politicians." No, it's not. All military
12 and civilian commanders and personnel, you guys all
13 involved. (Applause)

14 Because tonight I want to officially put
15 all of you on notice pursuant to U.S. Public Law 103-150
16 the Apology Law, the Universal Declaration on Human Rights
17 December 10, 1948 field manual -- field manual 27.10 July
18 1956, the law of land warfare.

19 You are obligated through the Nuremberg
20 Tribunals as an individual, as a civilian, and also as a
21 military personnel. So you're liable for things that
22 you're doing to other people and calling them people that
23 commit genocide against others.

24 So really take a look at it. For some
25 reason you got away with it for all these years. It may

1 not be your generation that had done it, but you guys got
2 to clean up that mess.

3 Because until Hawaiian issues, especially
4 our political status is settled, you're always going to
5 have turmoil over here in Hawai'i, believe me. It's not
6 going away.

7 So to me Stryker Brigade, bringing them
8 over here, I think you guys should just stop doing that
9 and wait 'til we, the Hawaiian people, decide the type of
10 government we want.

11 I'm not talking about Akaka Bill or
12 anything like that. I'm talking about an independent
13 country on its own, so that we can go into treaties and
14 agreements that we used to have with you folks which, of
15 course, you folks broke.

16 This first gentleman was talking about
17 treaties and agreements. Before you honor all those out
18 there, honor ours. Honor our treaties and agreements.

19 We have the right now, since President
20 Clinton had signed that law into effect, to restore our
21 government. You know that. We know that. It's just most
22 of our people don't know that yet. We still have to
23 educate ourselves and learn.

24 But I want to reiterate again. You're
25 officially on notice now, that you are belligerent

1 occupier of our country, kawai a no Hawai'i.

2 "Date: November 4, 2003. Time: 7:00 p.m.

3 or more like 7:35 p.m. Place Turtle Bay Hilton. The

4 official notice of human rights violations. Name: The

5 United States Army, Navy, Air Force and Marines, military

6 and civilian commanders and personnel.

7 "Pursuant to U.S. Public Law 103-150, the

8 Apology Law, Universal Declaration of Human Rights, Field

9 Manual 27.10 law of land warfare, U.S. public law 100-606

10 Genocide Act and the Hawai'i Constitution January 16,

11 1995. You are hereby ordered to cease and desist the

12 illegal preemptive expansion and belligerent occupation

13 and activities of Kawai a no Hawai'i. (Applause)

14 "You're further notified that any and all

15 interference with political, economic, social and cultural

16 rights of na kanaka ma'oli is in direct violation of the

17 United Nations convention on the prevention and punishment

18 of the crimes of genocide as codified in U.S. Public Law

19 9-606 the Proxmire Act.

20 "November 4, 1998, 18 U.S.C. Chapter 50(a)

21 1091(a) 3 and 4, 1091(c) incitement offense. Violations

22 of these laws carry strict and severe penalties including

23 a maximum of life imprisonment and up to a million dollars

24 fine. Notification of any and all violation by officials,

25 agents and officers engaged in actions that threaten our

PACIFIC REPORTING SERVICES UNLIMITED, INC.
(808) 524-PRSU

1 livelihood, subsistence lifestyle and well being of kanaka
2 ma'oli, native Hawaiians, would be conveyed to the
3 Commander in Chief, the President of the United States.

4 "This notice shall serve as prima fascia
5 evidence for all intents and purposes be it national or
6 international."

7 So you take that back to your superiors
8 because I putting you guys on the spot right now. You got
9 to deal with this issue. It can be good.

10 President Bush, your boss, he talks about
11 peace and trying to bring peace to the world. Hawai'i is
12 the global country of world peace. Hawai'i is where
13 you're going to find 'em. Free us up and you're going to
14 see that happen.

15 It's not the death and destruction of the
16 world. "Signed by me, head of State of Hawai'i, Po'o
17 Dennis K. Kanahale." Aloha. (Applause).

18 MS. AMARAL: Mahalo. Kyle Kajihiro
19 followed by Kunani Nihipali followed by Hooipo Pa.

20 MR. KYLE KAJIHIRO: Aloha kakou.

21 AUDIENCE: Aloha.

22 MR. KYLE KAJIHIRO: Aloha, Ko'olauloa and
23 salute to the workers of this hotel because they're in a
24 struggle themselves. (Applause) Aloha to all the folks
25 who came because we're here with our signs today.

1 (Applause) We stood up for our rights. That's the only
2 way you folks can get your rights.

3 The first thing I want to say is that you
4 guys really screwed up. You got to invalidate this
5 process. You really did. I want to read you something.
6 You guys, Title 32 the Code of Federal Regulations,
7 Appendix E part 651, quote "EISs will serve as a means to
8 assess environmental impacts of proposed military actions
9 rather than justifying decisions," end quotes.

10 I want to read you another quote. Senator
11 Inouye's press release June 26, 2003 quote, "Senator
12 Inouye has been assured that one of the six Stryker
13 Brigades will be based in Hawai'i and Schofield Barracks
14 will be building new facilities, adding personnel and
15 increasing its land area to accommodate this unit."

16 That sounds like a done deal to me. I
17 don't know how you can justify this process with this kind
18 of thing on the record. So put that in your comments to
19 take it back. This process is invalid.

20 What happened to seven of us last week, the
21 arrest to suppress our voice of opposition to the Stryker
22 Brigade, that just proves that this was a ramrod job. You
23 guys trying to force it through with as little opposition
24 as possible.

25 We're still here. We're going to keep

1 coming back. (Applause) Just as Bumpy said, you guys is
2 the malihinis here. You always forget that. One thing I
3 want to add to Bumpy's description, you guys get guns.
4 Like somebody come into your house with one gun and
5 ordering you around. How would that feel?

6 Can you right the cumulative impacts of a
7 hundred years of that kind of violence? Please put that
8 in your EIS. That's what we're dealing with here. We're
9 dealing with cumulative violence.

10 You always take, take, take and you never
11 ask permission. This whole process is about taking more.
12 You impose your will and then you come say, "What you guys
13 think," as an afterthought, you know.

14 You should be sitting down saying, "Please
15 can we do something?" If people say "no" that means no.
16 Right? If you did that to a woman that would be rape.
17 (Applause, whistles)

18 The pattern has been every time the U.S.
19 goes to war the military takes more land and destroys it.
20 You take land, you destroy it, you contaminate it, you
21 don't clean up.

22 The list goes on and on. I will start with
23 Kaho'olawe. Hewa. \$400 million, 1/10 of the island is
24 safe. We're returning it to the people. What can we do
25 with this? Now you're talking an equivalent area of land,

1 Pohakuloa and Honouliuli. It's unconscionable.

2 Makua Valley, another broken promise.

3 Families evicted. The land was supposed to be returned 6

4 months after the war but they're still waiting. And the

5 bombs are still going in that valley. Which means

6 parents, by the way. Which means parents. Think about

7 it.

8 How would you treat your parents? Waikane,

9 the waters of Kane. Sacred places. It's in the kumu

10 lipo. Yeah. The Kamaka family leased you the land

11 because they thought they were helping, only to have it be

12 condemned from them because it has unexploded ordnance

13 that the military was not willing to clean up.

14 Instead, they used their might to take it

15 away from this family. Uncle Raymond went to jail for two

16 years trying to fight for his land. Hewa. He'eia still

17 contaminated. Waikoloa still contaminated. Kala'e,

18 Waimomi, otherwise known as Pearl Harbor, 750 contaminated

19 sites. One of the worst contaminated places in the world.

20 Used to be the food basket for Oahu.

21 Lualualei, Nohile. I read in the e-mail

22 that there's going to be another taking of land over

23 there, 6,000 acres. That should be in the cumulative

24 impacts. That should be in there, Kalama Island, nuclear

25 dump site. Plutonium, one of the most dangerous chemicals

1 in the world is buried in an unlined landfill that's going
2 to wash away in about 50 years into moananui, Pacific
3 Ocean.

4 These are all cumulative impacts that you
5 ignore in these 1400 pages. I don't know that you can even
6 have the language to describe what's going on. But if you
7 want to do a really correct EIS, Environmental Impact, you
8 need to look at all of that.

9 You need to assess the violence of
10 generations who have lost not only the land but their
11 identities, the language. How do you measure genocide?
12 How do you put that into an EIS? How do you measure the
13 violence that's done from our shores employed to other
14 parts of the world?

15 These Strykers are meant to attack.
16 They're not defensive things. They're about invasion.
17 They're going to be used as -- they should mention that
18 impact in the EIS. (Applause)

19 You ask the wrong questions every time.
20 Security is not served by having more guns. Security is
21 having basic needs met. That's the difference between the
22 military mindset and what we're trying to tell you here.
23 Aloha 'aina.

24 That should be the driving concern in your
25 EIS. That should be the principle that you put forward.

1 That should be a question that you ask: How do we aloha

2 'aina this place? And everything flows from that.

3 Instead you ask, "What can we do?" You use

4 risk assessment which is basically how much damage can we

5 get away with?

6 The question is, "How safe can we make it?

7 Now clean can we get it? How much life can we put into

8 this place?" That a questions you ought to be asking.

9 I just want to go to and challenge your

10 issue of the purpose and need that's listed in this EIS.

11 Because you put it down as you need to have a place in

12 Hawai'i. So therefore you write your EIS all around it.

13 It's all about justifying the decision.

14 Uncle, can you bring this sign over, the

15 "follow the money" one. You mind coming up here and

16 helping me out?

17 I think this needs to be understood by more

18 people and also documented in the EIS. When you really

19 ask what's going on with this process and why it's moving

20 forward even though military people are calling it a death

21 trap, they're calling it a lemon -- I can give you some

22 websites as to where you can find that information.

23 You're gonna ask what is driving this?

24 What's the real purpose in need? It starts here in the

25 Senates Defense Appropriation Subcommittee where Senator

1 Inouye and Hawai'i and Senator Stevens and Alaska are the
2 two ranking members. Right. So they make the
3 appropriations for this thing.

4 General Shinseki is Kauai home boy for
5 Senator Inouye, he was also the former Army Chief of
6 Staff. This was his baby, his pet project.

7 His underling, General Hibner, right,
8 helped to engineer this deal, retired from the Army and
9 now took a lucrative position with General Dynamics. Who
10 is General Dynamics? General Dynamics makes the Strykers.

11 Okay. So a nicely oiled wheel here that
12 moves along. So we got to understand that, the people of
13 Hawai'i, and really start to interrogate. That's the
14 thing that's got us on the leash. Yeah? They're going to
15 keep making us beg, sit, stand, roll over until we can get
16 it. Thank you, Uncle.

17 So in closing I just gonna say invalidate
18 this process. And you know what? Save yourself the
19 trouble and just cancel this thing. Please take that
20 message to the White House, all the way to the top. Tell
21 them this is just a bad idea.

22 You can get more trouble from this. Cancel
23 this. Start cleaning up the land. Start cleaning it up.
24 Thank you. (Applause)

25 These are over 400 signatures demanding to

1 end the military expansion in Hawai'i. The military must
2 clean up and restore, return lands. That the economic
3 dependency must end by having real alternatives and that
4 the military must pay just compensation for use and damage
5 to Hawaiian lands. Over 400 signatures. (Applause
6 /whistles)

7 MR. CHANG: I'll ask the court reporter to
8 make a notation about the submission of this as an
9 exhibit.

10 The next speaker will be Kunani Nihipali.
11 Ho'oipo Pa has also asked him to speak on her behalf.
12 Following will be Carol Philips.

13 MR. KUNANI NIHIPALI: Aloha kakou, aloha na
14 kupuna. (Chanting in Hawaiian) This is my walking sign.
15 (Little girl with sign). Aloha. My name is Kunani
16 Nihipali. I'm a po'o with Hui Malama I Na Ka Iwi Hawai'i
17 Nei.

18 That's a group that's being caring for all
19 of the iwi that's been coming out from the infrastructure
20 that the military has built in Mokapu, Schofield, every
21 island that you can think of, Pohakuloa.

22 Anyway, America continues to abuse the
23 rights of their host culture, the native Hawaiian, our
24 guest the malihini, the kama'aina. Even after apologizing
25 for these abuses we knew all along that it was an empty

1 apology. Is this your way of reconciliation? I watched
2 the news last week. The first thing that came to my mind
3 is, hey, that's Kyle. Hey, that's Quinn. That's Steve.
4 That's our kupuna. Mikala Kekuni.
5 Then I saw them being arrested, taken away.
6 I said, "Ah, that's Rags. That's Bobby," referring to the
7 security guards. I saw all the blue lights passing
8 Helemanô as I headed home the other night. I wondered
9 what was going on? I turned the news on, was dismayed to
10 see more arrests.

11 I know all these people on both sides. To
12 me the first thing that came to mind is oh, again the
13 military enlisting the aid of the Honolulu Police
14 Department security guards to carry out their cowardly
15 work. (Applause)

16 We continue to witness how our people are
17 being manipulated by the so-called United States of
18 America and its agents, the state of Hawai'i, pitting
19 friends against friends, Hawaiians against Hawaiians,
20 family against family.

21 My thoughts were: How clever. How clever
22 of you to hold public meetings on private property. By
23 holding public meetings on private property one cannot
24 fully and adequately exercise their rights to be heard.
25 Shame on you, America. (Applause) Trespassing.

1 Trespassing? Who's trespassing on whose 'aina? (Loud
2 applause).

3 Is that best you can do? You steal our
4 nation in the guise of your democracy. You steal and
5 abuse our `aina. You steal and desecrate our iwi kupuna
6 from their burial grounds. You, America, commit crimes
7 against all U.S. domestic and international known laws of
8 nations. And you accuse us of trespassing at a public
9 meeting? (Applause)

10 Auwe. I guess when you have all money and
11 resources, taxpayers' money, public money it's because you
12 can. If you're using taxpayers' money, public monies for
13 public meetings, shouldn't the public have the right to
14 bear signs? Aren't you glad it's signs and not arms?

15 Aren't you lucky we're not replicating the
16 violent acts being taken against you people on the other
17 side of the world? What are you afraid of, America? Are
18 you afraid of people voicing themselves to protect their
19 'aina, their mo'olelo, their kupuna?

20 How long can the United States military
21 continue this abuse of a peaceful, feeble country by your
22 military occupation of our nation state, the Kingdom of
23 Hawai'i? You made Hawai'i your playground and your
24 dumping grounds for your lifestyles.

25 What will guaranty you -- what will

1 guaranty that you malama oka 'aina with the introduction
2 of the Strykers when you've not cleaned up your past opala
3 on the 'aina.

4 As witnessed by Pearl Harbor in World War
5 II America has, once again, placed Hawai'i in the path of
6 harm's way.

7 Hawai'i is an occupied nation by the United
8 States military since before 1893. Thirty-four percent
9 plus of our islands are already occupied by every military
10 branch of your armed services, 34 percent. On the best
11 lands too.

12 First you, America, participate in the
13 facade of the overthrow of our nation kingdom which had,
14 by the way, a constitutional monarchy based on democracy.
15 Then you fake the annexation of Hawai'i by the so-called
16 New Lands Joint Resolution by your Congress who did not
17 have the power to annex another country.

18 You gave us no choices in your fraudulent
19 process of statehood. And now this illusion of reality
20 continues. Here we are in the middle of the Pacific. We
21 need to maopopo, understand Pacific means peace. Hawai'i
22 is the piko, the lifeline, the center of the Pacific, the
23 global example, as Bumpy said, the country of world peace.
24 Hawai'i is known for aloha. (Applause)

25 Aloha 'aina, love of the land. Malama

1 `aina, take care of the land. Another important factor to
2 remember is Hawai'i consists of islands not continent
3 lands. There's a finite amount of space and we don't have
4 the lands to waste on your war games. (Applause)

5 We don't have the luxury of the vast lands
6 that a continent has. There are strong ties of us native
7 Hawaiians to our older sibling the 'aina, according to our
8 genesis.

9 So kala mai if we're passionate with our
10 passive protests and have to resort to our violent signs
11 (Laughter) which is supposed to be protected by your
12 constitution which guarantees free speech.

13 We are islands. Kapa'a 'aina Hawai'i, 2500
14 plus miles of islands. Every inch of an island is
15 important to all its living entities. And we need to
16 continue to practice peace, not war. You continue to
17 disrupt this practice of peace.

18 We kanaka continue to take the brunt of
19 your arrogant military occupation of our island kingdom of
20 Hawai'i. In your quest for more land to train, you
21 continue to desecrate our iwi kupuna, the bones of our
22 ancestors with your evictions, their evictions and
23 expansion of your military infrastructure over their
24 graves.

25 You refuse to negotiate in good faith. You

1 have taken the choicest real estate, 34 percent of our
2 'aina, wai, kai, mauna under your control. You managed to
3 place our flora and fauna under the worst indices of
4 endangered and extinct species without owning up to your
5 responsibility. Your controlled wild fires have been
6 responsible for much of the status.

7 I've witnessed this time and again, the
8 military disregard for our 'aina at Makua, Waikane,
9 Schofield, Pohakuloa, Kaho'olawe, Ni'ihau. The list goes
10 on.

11 Everywhere you've gone you've got the
12 reverse Midas touch, turning fruitful and pristine lands
13 and seas into barren lifestyles, lifeless training
14 recreation grounds for your military.

15 You request more land and seas and promise
16 us more pollution and desecration with these Stryker
17 units. We also face the possibility of facing a nuclear
18 powered aircraft carrier with its support vessels.

19 You bring in more military and their
20 families, spent billions in infrastructure and ignore our
21 people's plights of houselessness and evictions from our
22 land.

23 The U.S. military and the state of Hawai'i
24 has occupied and controlled these islands without just
25 compensation to the native Hawaiian people for over 110

1 years. America, show your good faith. Clean up your mess
2 first. Then maybe, as Kyle said, maybe if you ask nicely
3 we'll allow you to stay here on our terms.

4 Contrary to the Apology of 1993 you have
5 done nothing to reconcile this illegalality of your
6 actions. Your plans are to manage activism. You do this
7 by keep us talking. But that, too, is being usurped by
8 these arrests. Keep 'em litigating in the courts you
9 control the outcome of, divide and conquer by the arrests
10 you've conducted, buy off the leadership. That is
11 obvious.

12 In conclusion, as the po'o of Hui Malama
13 Kupuna Hawai'i Nei, the group caring for our ancestral
14 remains, I protest. I protest on behalf of our kupuna
15 past, present and those yet to be born against any and all
16 further, future military occupation of our peaceful nation
17 state, kingdom of Hawai'i.

18 Like our beloved Queen Lili'uokalani stated
19 and backed by the 40,000 kupuna who protested the
20 annexation of our nation kingdom in 1897 and sued the ku'e
21 monster petition, we say "As Americans, hear me for my
22 downtrodden people. Their form of government is as dear
23 to them as yours is precious to you quite as how you love
24 your country, so we love ours.

25 "With all your goodly possessions covering

1 a territory so immense that there yet remain parts
2 unexplored, possess islands although you at hand had to be
3 neutral grounds in time of war. Do not covet the little
4 vineyard of navits so far from your shore, least the
5 punishment of Ahab fall upon you, if not in your day, then
6 that of your children.

7 "For be not deceived. God is not lost.
8 The people to whom your fathers told a living God, taught
9 to call Father and whom the sons now seek to despoil and
10 destroy are crying aloud to him in their time of trouble.
11 He who will keep this promise and listen to the voices of
12 his Hawai'i children lament for their homes.

13 "It is for them that I will give the last
14 drop of my blood. It is for them that I would spend --
15 nay, am spending everything belonging to me. Will it be
16 in vane?

17 "It is for the American people, their
18 representatives in Congress to answer these questions as
19 they deal with me and my people kindly, generously and
20 justly so may the great ruler of all nations deal with the
21 grand and glorious nation of the United States of America.

22 Since that time we have managed to survive
23 the facade of an overthrow, a fake revolution followed
24 five years later by fake annexation and finding ourselves
25 living an illusion of reality called the 50th state, the

1 Aloha State, the United States of America. We will survive

2 the Stryker. Ku'e, ku'e, ku'e.

3 AUDIENCE: Ku'e. (Applause)

4 MR. CHANG: Carol Philips will be next

5 followed by Blake McElheny and Cathleen Mattoon. Just one

6 reminder, we are going to late tonight. Those of you who

7 cannot stay, wish to give testimony, please know that you

8 have a chance to.

9 There's a second court reporter that's

10 available in this side of the room in the corner for

11 anyone who wishes to offer testimony and can't wait to do

12 it at the podium.

13 MS. CAROL PHILIPS: Thank you and aloha

14 everybody. I just have to say that there is a lot of

15 Hawaiian activists here and we do need to make it pono.

16 It's got to happen. So I hope we can do that.

17 I'm American. I was born in the United

18 States. Lived in Hawai'i since I was three. And that's

19 got to happen. So hopefully the military can help us do

20 that. It is necessary.

21 And like Uncle Bumpy said, the aloha spirit

22 needs to be spread around the world more now than ever.

23 It really does. With that said I don't know what's going

24 to happen.

25 I don't know what kind of influence I can

1 have on the Stryker Brigade. But if it does go in, if it
2 does happen, there are some things that I would hope you
3 keep in mind.

4 One is that you set new standards of
5 environmental sensitivity and responsibility. And I'm not
6 talking about the standards that exist already, but higher
7 standards. That's been done. Because Hawai'i is the most
8 precious place in the world.

9 It's not called paradise because it's a
10 catchy name. It is called paradise because this is
11 paradise on Earth. Probably a lot of us are here because
12 we know that and we love that. It's pretty important.

13 The other thing is that a lot of the land
14 is a watershed. That's important too because that's our
15 life, the water. We know that the lens on our aquifers
16 are getting thinner, and thinner. We're under, you know,
17 rationing right now basically.

18 It just is important. Somebody once told
19 me the best place to operate, the most successful place to
20 operate is from reality. So let's operate from reality
21 and look at our water tables. Look at the state of our
22 world. We need to look in the direction we're going in
23 because the reality is pretty scary. (Applause)

24 There's a lot of realities. The population
25 on the North Shore, population of Hawai'i is not what it

1 is last time. So you're going to be impacting a lot more
2 people's lives in this and in whatever activities that you
3 do. So I would ask you to take that into consideration.

4 The North Shore, for example, is the second
5 most popular visitor destination on the island. These
6 things affect us. I don't know the answers.

7 I would hope that if your Environmental
8 Impact Statement passes that scrutiny of the Hawaiians and
9 passes the scrutiny of the Sierra Club and others, that
10 you do set the new standards and start making promises and
11 keeping them and moving us to the next level because the
12 world is in a scary place right now.

13 Hawai'i is -- has a special role in
14 teaching people what aloha means. I would just hope we
15 could do that. Thank you very much. (Applause)

16 MR. CHANG: Thank you. Blake McElheny,
17 then Cathleen Mattoon, Creighton Mattoon.

18 MR. BLAKE McELHENY: Thank you. Good
19 evening. My name's Blake McElheny. I was raised in
20 Pupukea. I guess I should real quick apologize. What I'm
21 going to speaking about is not nearly as significant as
22 some of the other issues that have been raised tonight.

23 But along the lines of some of the things
24 that were said, I want to thank the people of Ko'olauloa
25 for allowing my family to raise me here in Pupukea.

1 Real quickly, I think that I just wanted to
2 go over the fact that the Kahuku training area is a
3 reality right now. And even under the no action
4 alternative I would imagine would remain in place for at
5 least some period of time.

6 As I read the Environmental Impact
7 Statement there are several existing impacts that the
8 community experiences as a result of the military
9 presence. That would likely increase under -- with the
10 presence of the Stryker Brigade.

11 I think maybe those who have had a chance
12 to look through it or look through some of the materials
13 are familiar with those restrictions on recreational land
14 use, soil loss, erosion, the threat of wild fires, effects
15 on plant and wildlife species, effects on surface water
16 quality and runoff into the ocean as well as noise and
17 other potentially adverse effects on public health.

18 So we know that these effects are present
19 and the idea is how do we protect ourselves. How do we
20 protect human life? How do we protect the land with these
21 effects present?

22 One alternative would be the complete
23 removal of the military presence. Other alternatives are
24 trying to figure out ways to, I guess you could use the
25 word in the Environmental Impact Statement which is

1 mitigation.

2 I just wanted to highlight that one of the
3 potential mitigations that's mentioned is buffer zones.
4 It's a mechanism that non-profit local community
5 organizations can utilize to purchase lands that are for
6 sale.

7 I just was highlighting there's a vacant
8 property adjacent to the Kahuku Training Area that many
9 people in the Ko'olaupia area and other areas around the
10 island of O'ahu have been interested in protecting for a
11 very long time.

12 It seems, although, there's a bunch of the
13 other visions. Clearly perhaps through these we can move
14 forward respecting at least that one small piece of
15 Ka'aawa and other areas. I just wanted to put that out
16 there.

17 There's a community group that are trying
18 to work together to protect special resources not only for
19 the health of the land but for the health of the community
20 who lives out there.

21 Also for those who come out, visit,
22 hopefully something good will happen. Thanks for the
23 opportunity to testify.

24 MR. CHANG: Thank you, Mr. McElheny.
25 Cathleen Mattoon, Creighton Mattoon.

1 MS. CATHLEEN MATTOON: Aloha kakou. My
2 name is Cathleen Mattoon. And my roots are in the
3 ahupua'a of Punalu'u. My genealogy also includes the
4 ahupua`a of He'eia and Hau'ula.

5 I worked for the betterment of my family,
6 my community and my government through memberships in
7 various organizations like Punalu'u Community Association
8 for 30 years, the Ko'olaupia Hawaiian Civic Club for 32
9 years, the Local 5 H.E.R.E for 21 years and also the
10 Neighborhood Board for 18 years, and Ka Lahui Hawai'i for
11 10 years. (Applause).

12 I've appeared before community, city, state
13 and federal government agencies no matter how controlled,
14 misdirected or flat out phony they happen to be. It is
15 my hope that I can contribute honest mana'o that will
16 protect and enrich the lives of my family and my
17 community.

18 The subject of most hearings in Hawai'i is
19 land use. As a small island state we're always concerned
20 that every square inch of land be used wisely.
21 Historically the people of this land, kanaka ma'oli,
22 malama `aina. The land belongs to ke akua and we are the
23 keepers and stewards and receivers of its bounty.

24 If you malama the 'aina, the 'aina will
25 take care of you. Such a simple concept, but one that the

1 U.S. Army has not accepted and will probably ignore even
2 if we ask you to embrace it.

3 Throughout the EIS document it becomes
4 apparent that without exception every statement of
5 mitigation is prefaced by such words as "wherever, within
6 feasible, reasonable, practical or prudent," which tells
7 me that the U.S. Army will decide without input from state
8 or federal laws what constitutes feasible, reasonable,
9 practically and prudent.

10 The President has already declared that the
11 military will not be affected by environmental laws of the
12 land.

13 And I weep over this. Here, then, is a
14 repeat of what can happen to Hawai'i when it suits the
15 federal government. I say "repeat" because we should
16 never forget the occupation of the Territory of Hawai'i in
17 1941.

18 In the name of security, now referred to as
19 Homeland Security, the government of Hawai'i was replaced
20 by the U.S. Army. There was a military governor that was
21 assigned who explained the necessity that this occupation
22 would last until there was no longer a danger of enemy
23 attacks.

24 The U.S. Army took control of our courts,
25 labor, municipal affairs, press, civil defense, public

1 health, water, hospitals, prisons, jails, price control,
2 liquor, food control and control of production, land
3 transportation, gasoline rationing, materials, supplies,
4 collected fines and receipts, used territorial and county
5 properties and institutions.
6 Curfews, blackouts, controlled use of
7 beaches were imposed on civilians. Price controls placed
8 on anything and everything including liquor, gas, food,
9 rents and even prostitution -- which became legal under
10 the military control.
11 Courts were untrained military officers
12 with no training to hear simple misdemeanor or crimes
13 carrying the death penalty.
14 Provost judges, being inexperienced in
15 administering criminal law, imposed heavy fines and long
16 prison terms for misdemeanors that under civil law would
17 have warranted a fine or a short jail sentence.
18 The money derived from these fines was kept
19 by the military governor. To avoid harsh sentences these
20 prisoners volunteered to donate their blood.
21 We were the patriots of the Territory of
22 Hawai'i and were held under military rule for three years.
23 Japan, the enemy, was not made to function
24 under these stringent and suffocating rules when defeated,
25 or forced to give up their civilian courts.

1 As you must realize I'm a product of a
2 period of time when the military was to be feared and with
3 good reason. The best beaches and parks were off limits
4 to civilians. Jobs were frozen. One could change only
5 with the approval of the U.S. Army.

6 Thousands of men wandered the streets
7 looking for a good time. Punalu'u Valley was a jungle
8 training area to which hundreds of soldiers were
9 processed, utilizing the land without concern for the
10 impacts.

11 The stream was dammed. Roadways cut
12 through watershed lands. Trees were toppled and tons of
13 equipment moved in. The destruction was absolute.

14 How can the U.S. Army expect me to believe
15 you care about the 'aina when your record shows you do
16 not? Past behavior is a predictor of future behavior.

17 It frightens me that the U.S. Army is
18 asking to destroy even more of the 'aina. The land you
19 destroyed in the past could not fully recover over 50
20 years later.

21 There are still concrete bunkers in
22 Punalu'u Valley, unexploded ordnance in Waikane and only a
23 partial clearance of Kaho'olawe.

24 The military has not kept its word to
25 return the lands that they used as they found them. Must

1 we allow you to destroy forever more of this very limited
2 resource?

3 I have some questions I hope will be
4 answered later. And one of them is: What percent of the
5 lands in Hawai'i is currently used by military, Army,
6 Navy, Marine, Air Force? And I think someone already said
7 35 percent.

8 What percent if you add more lands, and how
9 does this compare with the rest of the nation? Is this
10 our fair share? I doubt it.

11 Given that Hawai'i has the most endangered
12 species in the nation, why would the U.S. Army demand the
13 use of special lands that they historically destroyed?

14 Is the cost of training somewhere else too
15 great a price to save our natural wonders? Will America
16 be in greater danger if the Stryker Brigade is not trained
17 here?

18 Also, how can you plan to integrate your
19 personnel and families without impacting the many services
20 provided by the state?

21 I'd like you to comment on the effect on
22 water and electrical power because you barely touched it
23 in your EIS. I'd like to have it expanded.

24 I'd like to know how you're going to handle
25 the impact of these families on schools, trash, parks,

1 environment, social services, health, courts, fire,
2 hospitals. Every additional person has an effect on our
3 limited lands.

4 Also, will you ever release Hawai'i from
5 military occupancy? Are we to accept imposition of
6 military influence forever? Whenever you discover a
7 better way to make the war better, will we always be your
8 choice of training and experimentation?

9 Is Hawai'i a dispensable commodity in the
10 eyes of this nation? I would appreciate responses in my
11 questions. I would suggest all public hearings in the
12 future be held in public places. (Applause)

13 I think you were ill advised to plan them
14 as you have. And I believe that some of the hearings
15 you've already had were probably negated because you
16 weren't able to hear all the people who were present.

17 I request a deadline for comments for EIS
18 be extended to allow us further review of the documents
19 that were provided.

20 Now, all of the information I gave you
21 about the occupation of Hawai'i came from this book, a
22 book that I think the military should read thoroughly. It
23 is called "Hawai'i Under Army Rule."

24 "What are the limits of the military power?"
25 A few hours after the attack on Pearl Harbor the Territory

1 of Hawai'i was placed under marshal law. The commanding
2 general proclaimed himself military governor and assumed
3 all executive and legislative powers.

4 "Civil courts were suppressed as Army
5 personnel moved in and took over the courtrooms, meeting
6 out penalties to civilians without regard for the
7 limitations of law and for offenses unrelated to military
8 security.

9 "For the first time in American history a
10 military government was established on loyal American
11 territory. And civil courts were completely superseded by
12 military tribunals. Not until October 1944, long after
13 the passing of any threat of invasion, was marshal law
14 finally terminated."

15 I would say that everyone should read
16 "Hawai'i Under Army Rule" especially the military, because
17 it still contains important lessons for America as it
18 faces the increasing challenge of maintaining the
19 supremacy of civil law and liberty in uncertain times.

20 Mahalo. (Applause)

21 MR. CHANG: Thank you. Before the next
22 speaker, Creighton Mattoon, there's an announcement. The
23 public comment period for this Draft EIS has been extended
24 to January 3, 2004. (Applause) Creighton Mattoon,
25 followed by Ikaika Hussey. And after that, Gwen Kim.

1 MR. CREIGHTON MATTOON: Aloha mai kakou.

2 AUDIENCE: Aloha.

3 MR. CREIGHTON MATTOON: I'd like to express
4 my appreciation to Local 5 for the lei that they presented
5 us outside when we greeted all the people who have been on
6 the front lines in the various public hearings before this
7 one tonight.

8 Once again, I welcome you all to
9 Ko'olauloa. It's good to see you here. Good to hear your
10 mana'o. You people have given some tough acts to follow,
11 including the one right before me. I had to say that.

12 I wear several hats myself. I have
13 testimony as chair of Ko'olauloa Neighborhood Board No.
14 28. Basically in it I also ask for the extension of the
15 deadline. And I know you've extended to January 3.

16 If it's possible, since our board would not
17 be able to take any kind type of action for or against the
18 EIS, we were asking whether it could be extended to
19 January 30.

20 That would give us time to hold our
21 meetings and deliberate and also render an opinion.
22 That's my presentation as the chair of the Ko'olauloa
23 Board No. 28.

24 I also wear other hats, as my wife does.
25 I've been a citizen of Ka Lahui Hawai'i for the last 10

1 years, Ko'olaupia Hawaiian Civic Club and several other
2 organizations. (Applause)

3 Tonight I speak as an individual. I've not
4 been able to review the Draft EIS in its entirety, having
5 focused my attention on the Kahuku Training Area.

6 However I believe my comments will be
7 applicable to other sections of the EIS. I'm concerned
8 that, once again, the military is seeking to acquire more
9 of our limited land area with its limited but precious
10 resources to conduct training for war.

11 It has chosen Hawai'i over much larger
12 areas such as Mississippi and Alaska in spite of certain
13 negative impacts it will have on our people, our culture,
14 our environment and its resources.

15 Apparently some would consider this a
16 reasonable price to pay for speed of mobilization. I'm
17 convinced that the choice to intrude into our 'aina once
18 again was made by employing the old fashioned risk
19 assessment technique instead of the precautionary
20 principle in making environmental decisions.

21 The risk-based approach asks the question
22 how much damage is okay? Then limits are set to allow
23 that much damage to happen. But often these limits are
24 exceeded.

25 Some say this is why so much of our planet

1 is contaminated, chronic disease is increasing. This is
2 why we have so many endangered species and extinct species
3 in Hawai'i. This is why we have dwindling water supplies.

4 On the other hand, in the precaution-based
5 approach, all reasonable alternatives are considered and
6 the question is asked: How little damage is possible? It
7 assumes a better-safe-than-sorry attitude. Or is it
8 better to err on the side of caution when considering
9 impacts on our environment, our resources, our people, our
10 culture?

11 In the Kahuku Training Area the EIS states
12 that when using short-range training ammunition there's a
13 high risk of wild fires.

14 Another section mentions that certain
15 activities will create a high probability of soil erosion.
16 Yet another section it is reported that there can be no
17 assurances on the safety of biological species.

18 In each case the mitigating measures are
19 less than convincing. Although surface water impacts are
20 mentioned, it would seem that groundwater impacts are not
21 addressed at all. At least I couldn't find one.

22 Finally, the EIS does address cultural
23 impacts in the Kahuku area. It does mention 23 sites in
24 the upgrade area of Drum Road alone. It does propose
25 mitigation measures in dealing with recorded sites and how

1 to deal with inadvertent discoveries.

2 But the record, not just with the military,
3 but also with civilian entities, would seem to indicate
4 that these measures are mostly after-the-fact measures,
5 such as unearthing of our iwi kupuna which occurs over and
6 over and over again, more recently in Punalu'u during the
7 Board of Water Supply waterline construction when the iwi
8 were unearthed.

9 This goes on all the time. The measures
10 are after the fact. I would like to end this presentation
11 by saying this EIS in my opinion -- I've seen many
12 EISs -- it does not seem to be a comprehensive,
13 scientific and professional piece of work. Mahalo.

14 (The proceedings are continued on the
15 following page)

25

1 MR. CHANG: Thank you all for your patience. I
2 think we've been going for quite a while, so let's take a
3 break. They brought some coffee and some cookies.
4 Perhaps a ten-minute break, and then we'll resume with
5 Ikaika Hussey. I made a mistake. Following
6 Ikaika Hussey will be Matthew Tarawa, then Gwen Kim.
7 Okay. Ten minutes, please; then we'll see you
8 back here.

9 (Recess from 8:30 P.M. to 8:34 P.M.)

10 MR. CHANG: Mr. Hussey? Is he available?
11 If not, we're going to move to the next speaker.
12 Mr. Hussey?

13 Otherwise, we'll just skip. We'll come back to
14 him, of course. But we better keep moving on.

15 All right. Following Mr. Hussey will be
16 Matthew Tarawa, and then Gwen Kim.

17 Mr. Hussey?

18 MR. IKAIKA HUSSEY: Thanks.

19 Actually, I'm pretty sure that Mr. Hussey is my
20 father, who's standing on the side.

21 Thank you very much.

22 I'm sorry to keep you all waiting.

23 I want to come and speak because I've always
24 believed that speaking is a very important thing to do.
25 It's always important to have ideas raised, ideas heard,

1 and for -- especially that voices should be heard that
2 aren't usually heard. And it's come to my attention from
3 individuals who are -- who are actually on staff with the
4 military as civilians that there are several
5 environmental problems that may not necessarily be
6 covered within the text of the EIS, which should be
7 brought up. And, so, as part of the politics of having
8 voices heard which can't always speak, even though they
9 may be voices which otherwise are very empowering, I'd
10 like to bring out the issues. And one of those is the
11 question of the impact on using a vehicle which -- and
12 I'm not a technician about this stuff, so I apologize.

13 But what is the recovery rate for land that has
14 been traversed by vehicles such as the Stryker, a 20-ton,
15 21-ton vehicle once it's finished and it's completed as a
16 vehicle? What is the recovery rate of land, you know?

17 I understand, also, there's been -- Hawaii is,
18 obviously, not the only land that has been targeted as a
19 site for the siting of a Stryker Brigade. And, so, I
20 think it's important that the military supply citizens
21 here with information garnered in those other sites, in
22 other installations where the Stryker has been deployed
23 for training.

24 You see a lot of people around here with signs.
25 A lot of times the signs are also a vehicle for having

1 voices heard which can't speak. And, so, I'd like to say
2 mahalo to all of you holding signs. I know the arms get
3 tired, and sometimes you need water.

4 And water is another thing that I want to talk
5 about. I'm going to hit several points that may not be
6 connected, but they're connected because I'm the one
7 saying them.

8 Water -- we're talking about bringing another
9 700 more troops, plus their families. Hawaii's
10 population of 1.2 million can barely survive on the land
11 as it is now. We know that the impact of tourists coming
12 to Hawaii puts a significant strain on our natural
13 economy; that is, the circulation of the things that give
14 the island life: Water, air, land itself.

15 How are we going to -- and I want this to be
16 addressed, also, in the final version of the EIS.

17 What is going to be the cost in very human terms
18 of bringing in 2,000 more people, and whatever other
19 people have to come, to an island which can barely
20 sustain its current population?

21 That's another question that I have.

22 Second point, third point, fourth point,
23 whatever, I'd like to -- I'd like to speak to the workers
24 who have taken care of us here tonight. And I want you
25 to know that we stand in solidarity with you, as Hawaii

1 Aloha Aina. Recognize that it's working-class people who
2 are harmed first and harmed to the most degree when
3 environmental impacts are assessed on the land, on the
4 community; that it's working-class people who can't go
5 back to our house in Kahala, turn on the air
6 conditioning, turn on the television, and shut out the
7 world around them. I live on a very crowded and very
8 busy street in the middle of downtown. I know what it's
9 like when your house becomes, you know, the viaduct to
10 the freeway. It's not funny. And I know that people who
11 can't afford to move out of communities are subject to
12 the environmental impacts on those communities, to the
13 traffic impacts.

14 Right now, with the Stryker Brigade, we're
15 talking about -- we're talking about expansion of use of
16 munitions, of land in Wahiawa, at Schofield Barracks; by
17 Schofield Barracks, also Pohakuloa. And the EIS does a
18 fair job of assessing the environmental impact on those
19 specific geographical areas. However, as -- one point
20 that Hawaii Aloha Aina feels very strongly about is
21 looking beyond those boundaries and trying to assess what
22 is the environmental impact on surrounding communities.
23 The water that accrues at the water lens under Wahiawa,
24 that water flows -- flows down to the ocean, both north
25 and south. And, so, any toxins that are released into

1 the water, any -- any of the mutagens or cancer-causing
2 agents which are released into the environment, they
3 float down to Waipahu, which is a working-class
4 community; they flow down to -- they flow down into
5 Wahiawa Proper; they flow down to Ewa. They don't flow
6 to Kahala, obviously. They flow -- they flow north,
7 towards Haleiwa and Waialua. These are communities which
8 are going to be affected by the activities taken by the
9 Army at Schofield. I can't really speak to Pohakuloa and
10 that area because I don't know the aina as well. But I
11 do want to voice some words that say that we should be
12 looking. And I'd like the final version of the EIS to
13 make a sustained and serious effort to address the
14 environmental impact on the surrounding communities
15 around Wahiawa.

16 Again, I'd like to say mahalo to everyone who
17 came out tonight. And I know there's a lot more
18 speakers. And it's really an honor to be a part of the
19 process, which is not the official process, but it's the
20 process of citizen dissent, of dialogue, and democracy.

21 Mahalo.

22 MR. CHANG: Thank you for your consideration, as
23 well.

24 Just a reminder: We have new technology. In
25 addition to the fact that the comment period has been

1 extended to January 3rd of 2004, you also can submit
2 additional testimony or your basic testimony by e-mail
3 and by fax, if you are interested in doing so. There's a
4 little card at the sign-up desk that you can get the
5 e-mail address and fax information.

6 Okay. Can we go to the next speaker, then,
7 Matthew Tarawa, followed by Gwen Kim, please, and
8 DaVianna McGregor after that.

9 MR. MATTHEW TARAWA: (Speaking in Maori.)

10 My full name is Matthew (Maori name), or Matthew
11 (Maori name) Tarawa, and I belong to the Confederation of
12 the United Tribes of Raoteroa, New Zealand. (Inaudible
13 because of applause) and full support to kanaka maoli and
14 all who live on these great islands of Hawaii, the land
15 of our ancestors, we say. We were here something like
16 about the year 200 A.D., when our ancestors lived here,
17 over the Big Island over there, over the other side,
18 (inaudible) from there to Kualoa, from there to Raoteroa,
19 Land of the Long White Cloud. That's many centuries ago.
20 So we know where we came from. (Speaking in Maori.)

21 When I first met in 1991 the United Nations hui
22 to deal with indigenous peoples of the world, we produced
23 there what is now known to the whole world as world
24 patriot rights, and also intellectual property rights,
25 and he was with us there. It was during that time he

1 said to me, "Come over to Hawaii sometimes with me." So
2 I want to say to you, I came; but I missed him by about
3 two or three days. He passed away. But we put together
4 the biggest march in Hawaiian history; and that was on
5 the 17th of January 1993, along with (inaudible) Logan,
6 Kekuni Blaisdell, and others. We put that march
7 together, and it became the biggest march in the Hawaiian
8 history.

9 Do you remember that?

10 So I want you to know that I bring you the love
11 of our Maori people of New Zealand. Maori, Maori,
12 (inaudible) the same. "Ma" means white, pure, clean;
13 "Ori" means original. So we're all original people. We
14 are the people of the land. All of Hawaii belongs to
15 kanaka maoli.

16 I want to say this about this Stryker Brigade.
17 We knew about this some two years ago, that we're going
18 to send one of these machines over there to control
19 Maori. Not a chance. No way would we have any of these
20 machines over there, not one. No. We support you.
21 Bumpy Kanahele, all the rest, and all of those in
22 support.

23 You know, this Stryker Brigade, why -- want to
24 be turning Hawaii into a military state?

25 It cannot be, because (inaudible) people.

1 Isn't that correct?

2 (Speaking in Maori.)

3 So I want to say to you on behalf of the
4 Confederation of the United Tribes of Raoteroa, Secretary

5 to the Chiefs, chiefs and -- not just one; there are

6 several hundred. In fact, we are a land of chiefs.

7 There's very few Indians. We're running short of

8 Indians. I think they're all in Oklahoma someplace.

9 But anyway, anyway, we're here to support you.

10 We're here behind and in front. And with

11 Kekuni Blaisdell, you have great leaders in Hawaii; make

12 no mistake about that. And, you know, it's the leader

13 who says "we". Those who have -- say "I", "I", they have

14 an "I" problem. They need to go and to see an optician

15 and have a good look at themselves. So it's "we", not

16 "I".

17 And, so, I want to say again: We support you

18 totally in your stand against the Stryker Brigade because

19 these are acts of war and aggression, (inaudible),

20 genocide, discreet. Otherwise -- in fact, they are in

21 fact worse than the Holocaust. That's what it is to me.

22 I want to say lastly, colonization, for me, as a

23 leader of my people back in Raoteroa -- and I'm sure I

24 have their permission to say this -- that we have come to

25 the time in the lives of all humanity. I'm not talking

1 just about here in Hawaii, but all throughout the world.

2 We must take control of what is rightfully ours:

3 China/Chinese, Japan/Japanese, like that. You cannot go

4 and take away something that belongs to someone else;

5 that's theft. Thou shalt not steal. That's what it says

6 in the Good Book. Thou shalt not steal. Thou shalt not

7 commit murder. Thou shalt not commit adultery. Well,

8 there are adulterous nations that will do these things to

9 another people. It's wrong; it is wrong.

10 And, you know, America, the greatest power on

11 earth, they weren't able to stay the powers that be. We

12 know what happened right there in New York. So what is

13 needed throughout the world is a greater understanding of

14 free things.

15 (Speaking in Maori.) Faith, hope, charity is

16 the greatest of all of these. All of these laws hang

17 over all the other laws that -- basic laws and

18 understanding for our all humanity, because it comes from

19 that aloha.

20 Hawaii is known as the Land of Aloha by all

21 those who are outside of this country. They look because

22 it is the Land of Aloha. And it will remain the Land of

23 Aloha if we get rid of this Stryker Brigade. We gotta

24 get rid of them in anything. We must not turn Hawaii

25 into a military state.

1 So I say to you again, I want to say to you
2 again, I give you the love of the (Maori word) of
3 Raoterua, the Maori, Land of the Giants. Our people --
4 some of our people stood from seven foot to eight feet.
5 I don't know what happened to me; so I'm not a very good
6 example of that. But I know my own ancestors are all
7 eight feet tall. We have a (inaudible) bird over there,
8 the largest eagle, I believe, in the world. It has a
9 40-foot (inaudible) wing span. So -- and I'll show you a
10 picture after this if anybody wants to see it.

11 But, in closing, I want to thank
12 Kekuni Blaisdell and all the leaders here, kanaka maoli
13 leaders that are fighting, making their stand, making a
14 stand for that which is correct and right.

15 There is only -- there is only one last thing
16 that I would like to say to you. I know you will win the
17 fight against acts of war and aggression. You know what
18 happened to Hitler (inaudible), all of these dictators.
19 This is not a land of dictatorship. It's a land of
20 aloha, and we need to permeate that right throughout the
21 whole of the -- whole of the islands of Hawaii: Maui,
22 Molokai, Maui, and over there, for all of these islands,
23 and right throughout the whole of Hawaii. So I leave
24 that with you.

25 And I'd like to sing you a song in conclusion,

1 because I sing very well: (Singing in Maori.) How great

2 Thou art, how great Thou art.

3 (Speaking in Maori.)

4 (Speaking in Maori) to all our cousins here in

5 Hawaii. And I don't mean kissing cousins, either; I mean

6 the real cousins. As I look around, I see many, many of

7 our people here tonight, and all together, we all become

8 one people. They're not going to, they're not. On

9 behalf of the Confederation of the United Tribes of

10 Raoterua, I give you once more our love and aloha to all

11 of you. (Speaking in Maori.)

12 MS. AKA: Thank you.

13 The next speaker will be Gwen Kim.

14 And, just to let you know, she is Number 21, and

15 we have 57 speakers. So, again, if you are at the end of

16 the list and you can't stay, please remember that there

17 is a transcriber over to the right here.

18 MS. GWEN KIM: Aloha 'ane kupuna and our

19 precious brothers and sisters.

20 I just wanted to say, you know, a mahalo for all

21 the support that has been expressed to myself and I'm

22 sure the others of the Stryker -- A'ole Stryker 7. My

23 name is Gwendolyn Kim, and I am now going to try to

24 present the testimony that I was prevented from

25 attempting to -- oh, I think we get all of my mo'opuna up

1 here; they recognize my voice -- prevented from doing on
2 the initial night of these hearings, these so-called
3 "open, public forums", first at the Honolulu Country
4 Club, and then second evening at the Helemanô Plantation,
5 when our kupuna, Kekuni Blaisdell, and his kako'o were
6 again arrested. And I was told that I needed to leave
7 because higher-ups had made a decision that I could not
8 present my testimony. So through the will of the people
9 and the strength of the people, we all are in here, with
10 our signs and our resolve.

11 So -- you don't have to clap when she claps,
12 because she's going to clap probably at everything I say.

13 Did I mention my name yet?

14 Okay. And that I am testifying on behalf of
15 Ohana Koa, Hawaii chapter of the Nuclear Free and
16 Independent Pacific. An emphatic a'ole to further
17 military expansion. The military already controls
18 one-fourth of Oahu, 8,000 acres in Kahuku alone,
19 beautiful swaths of land, never seen or enjoyed by people
20 in this room. Your names resonate like lost children.
21 Mokapu, Bellows Beach, Kolekole Pass, Schofield,
22 Pearl Harbor, Kahuku, Halekoa, Makua Valley, Waikane,
23 more, one-fourth of Oahu. Here, in our little town,
24 mauka, 8,000 acres, in perpetuity.

25 And what kind of caretakers will they be when

1 their 20-ton wheelies break up the environment mauka? Do
2 we think dune buggies and our little -- what -- that our
3 kids want, dune buggies and their three-wheelers?
4 Hey, we are aghast that they don't -- they're
5 ripping up our beaches; they're ripping up terrain and
6 stuff.
7 What about these 20-ton weapons of destruction,
8 playing their war games up mauka; how is it going to
9 affect our town below in Kahuku, that already experiences
10 extreme flooding problems, which the government has not
11 yet addressed?
12 Your arrogance surpasses all imagining. That
13 you would come before us, greedy for more, is an affront,
14 knowing of the illegal overthrow of this tiny but proud
15 nation over a hundred years ago, that you would think
16 this place is so pacified, people here so ignorant or
17 bought-out that you would dare to put forward this plan
18 for expansion. A'ole. Your (inaudible) are read by way
19 of millions of dollars for construction contracts are
20 seen as temporary illusions of sustenance, as you destroy
21 long-term independence, cultural sites, entire valleys
22 and islands in your rampaging arrogance of empire. A'ole
23 to your (inaudible) tied straight to selling our souls
24 for temporary jobs and illusions of power, with strings
25 straight to the man.

1 Like I said, she's going to keep clapping at
2 every sentence.

3 A historic time faces all who know.

4 Shall we survive by backing down from the might
5 of the U.S. military, with all its weapons of mass
6 destruction, or shall we survive by standing together
7 against this carnivorous Pac-Man that eats independent
8 sovereignty-poor nations to feed its voracious appetite
9 for oil, Lear jets, Armani suits, and butlers?

10 The Stryker Brigade will be used against
11 brothers and sisters of Moana Anu and Asia, as they, too,
12 fight for land, water, and justice.

13 When does compromise make us lose our souls, our
14 very identity? Why is so much money being brought to
15 kapae aina while the most incredible militarization since
16 World War II is occurring?

17 Let the mo'olelo of our children speak of our
18 courage as we stood to resist this thief, destroyer of
19 dreams and the earth. As we stand, so do we create the
20 alternative to this mad military killing machine.

21 Both evenings inside the hearings, when I was
22 prevented from going on by force, I was told it was like
23 a cocktail party of illusionary freedom happening inside.
24 Hate. It is. Lots of illusions here. Lots of
25 illusions.

1 Free speech? Real input?

2 Done deal. Collusion between the military,
3 state HPD, and private security guards equals military
4 state, to me. The emperor has no clothes.

5 MS. AKA: We're going to actually have to change
6 the tape in the camera here, so that's going to take
7 about a minute.

8 So I just want to let DaVianna Pomaika'i
9 McGregor know that she's next, and then Mohala Aiu; and
10 then, after that, is Roxanne Duville (phonetic).

11 (Pause in proceedings.)

12 MS. DaVIANNA McGREGOR: Aloha kakou. My name is
13 DaVianna McGregor, (Hawaiian name) McGregor. I'm a
14 professor of ethnic studies at University of Hawaii,
15 Manoa campus. And I -- my ohana and my grandpa on my
16 grandfather's side, my dad's side, comes from Hau'ula.
17 We have aina in Hau'ula. And my ohana also has land at
18 Waiale'e, which is in the shadow of the training at
19 Kahuku Range. And I can recall as a young girl, when we
20 were sleeping out there, hearing the guns and the weapons
21 and witnessing the tanks on the roads and feeling like we
22 were really in an occupied land, as a third-world
23 country, not in America, which we didn't believe we were
24 part of America at that time, anyway.

25 And I'm also Access Co-Coordinator for the

PACIFIC REPORTING SERVICES UNLIMITED, INC.
(808) 524-PRSU

1 Protect Kaho'olawe Ohana. And, so, my testimony will
2 address some of the work that I've done and the problems
3 with the Environmental Impact Study, from my point of
4 view, as having been an expert witness in the Makua
5 Environmental Impact Study case and contested case
6 hearing, and my work with the Cultural Impact Studies;
7 and then, also, finally, in my experience with
8 Kaho'olawe. And I will rework my testimony; but I
9 haven't had a time -- chance, really, to review it
10 thoroughly.

11 Moreover, the element which I'm most interested
12 in and which is my area of expertise, the Cultural Impact
13 Report, is not in the report; it hasn't been completed.
14 And I request a copy of the Cultural Impact Study when it
15 is completed, because my concern is the living practice
16 of our culture, not the archaeological sites as much as
17 the ongoing living practice of our culture. And the
18 Environmental Impact Study, in the Cultural Section, only
19 looks at archaeological sites and impacts to
20 archaeological sites. And it promises that there will be
21 a survey -- a summary of survey of cultural practitioners
22 and, also, a report on informant interviews, and I'm
23 interested in reading that.

24 Page 3-73 cites a report that I worked on,
25 called "Kanu o Ka 'Aina", as a source for identifying

1 categories of culturally significant natural resources;
2 and it includes areas of naturally occurring or
3 cultivated resources used for food, shelter, or medicine;
4 areas that contain resources used for expression and
5 perpetuation of Hawaiian culture, religion, and language;
6 places where known historical and contemporary religious
7 beliefs or customs are practiced; areas where natural and
8 cultivated endangered terrestrial marine flora and fauna
9 used in Hawaiians' native ceremonies are located or
10 materials for ceremonial arts and crafts are found; and
11 areas that provide natural and cultural community
12 resources for the perpetuation of language and culture,
13 including place names, and natural, cultural, and
14 community resources for arts, crafts, music, and dance.

15 While those -- those categories are listed there
16 on Page 3-73, the Cultural Impact Statement does not
17 address -- or the Environmental Impact Study does not
18 address those cultural resources. There's no evidence
19 that subsistence hunters and gatherers or cultural
20 practitioners have been consulted regarding the uses of
21 cultural and natural resources. And, as I said, the
22 Cultural Impact Study is promised to be produced; and
23 hopefully it can be produced before the deadline, whereby
24 we can comment, so that we'll have adequate time to
25 review it and comment by January 3rd, 2004.

1 The living cultural practices of Native
2 Hawaiians are important to assess and to protect. And in
3 other studies, Cultural Impact and Environmental Impact
4 Studies, such as with the Geothermal Study and the
5 Proposed Space Board Study, where these cultural impacts
6 were vital, we assessed impacts to not just resources but
7 to ohana and impacts to the ability of ohana to gather,
8 and also to continue the relationship to ancestral lands,
9 the ability of the community to gather and to -- and what
10 would be the overall impact on social relations in the
11 community.

12 Will the new forces, for example, stationed here
13 change the delicate ethnic balance in the community?

14 Those issues are also factors to assess.

15 Human well-being and spirituality is another
16 factor, natural resources, customs and practices, Native
17 Hawaiian rights, which have been widely expanded on
18 tonight, and economics.

19 And in regard to the natural cultural resources,
20 the report needs to address what will be the impact in
21 terms of changing conditions; that is, changes in quality
22 and quantity of resources, size of resources, the
23 usability of the resources, the boundaries that define
24 these resource areas, the integrity of the resources, and
25 the quality of the cultural experience.

1 Moreover, there needs to be a cumulative impact
2 study, not in the matter that you have. I know you have
3 a little section on cumulative impacts, and it's looking
4 at related development, like a new bridge on the old road
5 going from Wahiawa to Waialua or improvements that will
6 be made to this hotel as part of the process of
7 cumulative impact. But what it doesn't address is the
8 real cumulative impact that we are concerned with, which
9 is, that overall, once these lands begin to be used as
10 training ground, access will be cut off to them for
11 Native Hawaiian rights and Native Hawaiian practitioners;
12 and the long-term impact is, that once these lands are
13 allowed to be impacted by ordinance, we're never going to
14 have these lands returned to us again.

15 And, so, I come to my experience with
16 Kaho'olawe. And on Kaho'olawe, only 71 -- well, between
17 69 and 71 percent of the land has been cleared. That
18 means between 29 and 31 percent of that island will never
19 be cleared. It means that access to those areas will
20 continue to be restricted. And then 52 percent of the
21 land has been cleared to a surface level, and that means
22 that those lands can only be accessed with UXO-trained
23 escorts. And 9 percent of the land has been cleared,
24 which is available for our cultural practices and which
25 are significant areas that we in the ohana have accessed

1 for 24 years now very safely and have re-opened important
2 cultural sites. But 9 percent means that there's a
3 continuing impact to those few areas that we have access
4 to. And there are many more important areas on the
5 island for cultural use that will never be able to -- be
6 able to be expanded unless it can be cleared of ordnance.
7 And, so, it puts added strain on the areas of
8 significance, great significance: Kealaikahiki, Muaioiki,
9 Hakioawa, all the important areas have been cleared. But
10 it puts a strain on those areas where we couldn't begin
11 to expand out. And we also have to heal all the island
12 and not just 9 percent of the island.

13 But our experience in Kaho'olawe and the lesson
14 of Kaho'olawe is, that once the military takes over the
15 land, you never get it back. You never get it back. And
16 once you begin to allow military impact of ordnance, then
17 these lands will be -- you know, continue to be -- after
18 400 million dollars was spent, only 9 percent has been
19 cleared; and it's important that that come back. But I
20 think that will hold up as a model that -- in Waikane,
21 for example, the Native Hawaiian family was giving the
22 land with the idea that it would come back to them, and
23 then the military said it could never be cleaned up to a
24 level that's safe. And now you're willing to send in
25 troops to be trained there in unsafe areas.

1 The other lesson of Kaho'olawe is, that as
2 Native Hawaiians, in which it's been addressed tonight
3 and spoken to very eloquently, Native Hawaiians came
4 together to demand an end to the bombing because we do
5 not want our islands to be a staging ground for war. We
6 are stewards of the land. And the lesson of Kaho'olawe
7 is, that as Native Hawaiians, we are ancestors -- our
8 ancestors are the resources of the land, the various
9 elements, Kane, water, and Kanua, the ocean, and Lono,
10 who brings the rains that will come visit us in Makahiki.
11 And as descendents of these natural elements, it is our
12 responsibility to serve as stewards of these lands. And
13 as stewards of these lands, we cannot allow the continued
14 abuse of our islands by the military. And, so, the
15 lesson of Kaho'olawe is, we don't want military to take
16 more land. You cannot return land on one hand and take
17 with the other. We want our land back. We want Hawaiian
18 lands in Hawaiian hands.

19 Ms. AKA: We have Mohala Aiu next; Marion Kelly;
20 and then Noenoe Silva.

21 MS. MOHALA AIU: Aloha. I haven't had a chance
22 to go through the whole EIS because it's so huge. But I
23 was concerned about cultural impact to the land. And I
24 believe that it is never adequately covered in any EIS
25 I've seen. So I wanted to just give a few points; and it

1 will be a short testimony. I want to hand in written
2 testimony later, when I have a chance to better review
3 it.

4 In consulting with Native Hawaiian groups, I
5 don't believe that only consultation with Native Hawaiian
6 groups gets the whole picture. They should also consult
7 with ohana and individuals. I want them to look at the
8 current cultural uses of land as well as the historical
9 uses; and I want them to see that how can current use
10 continue if they keep on blocking access to lands.

11 I also am concerned about the use of land and
12 the continued use of new lands and what this will do to
13 the culture, landmarks, things that Hawaiians are -- hold
14 dear and are used to seeing through historical eyes.

15 And if they change, what does that do to our
16 culture? What does it do to our livelihood? And what
17 does it do to us as people who live in a strong relation
18 to the land?

19 I also wanted to make a point of -- as
20 DaVianna McGregor said before, land that is given to the
21 military is never returned in the same shape it was, and
22 it's never -- we'll never see it again in the same and be
23 able to use it again in the same context. And, so, the
24 military asking us for more land is not good. It's --
25 it's very wrong.

1 I want to see what they're doing to safeguard
2 the land for our future generations and how military use
3 could stand side by side with Hawaiian values and say
4 that -- in one sentence say that they -- they want to use
5 the land and use it well and still maintain Hawaiian
6 values. I can't see that -- those two points coming
7 together.

8 Hawaii -- the Hawaiian Islands have already
9 suffered heavily under military use. Oahu and Hawaii
10 Island have had a huge impact. And I don't want to see
11 any more buildup. I don't want to see the Stryker
12 Brigade here.

13 How can this buildup translate to the military
14 being good neighbors?

15 I think the U.S. military sees us, Hawaii and
16 Hawaiians, as expendable and as a strategic location and
17 nothing more.

18 How does this stand in relation, in solidarity
19 to Hawaiian values?

20 Thank you.

21 MS. AKA: Marion Kelly, and then Noenoe Silva.

22 DR. MARION KELLY: Aloha. Thank you for all
23 being here. I think this is a tremendous turnout.

24 I want to thank the people here who gave me this
25 beautiful lei. Mahalo.

1 Secondly, I want to ask you, whatever you can do
2 to get the people who were arrested at the other two
3 released, finished, pau, the end, never again.

4 Because the U.S. military plans to take
5 thousands of acres of land on Hawaii and Oahu and run
6 their Stryker Brigade machines over this land, and
7 because our islands are small, I must speak out against
8 their plan. I will tell you what I know about the
9 60-year track record of the military in just one of the
10 valleys that I studied: The Makua, Makua Valley. This
11 is a report that the military refused to publish.

12 Can that tell you something?

13 They don't want you to know what they have done.
14 The U.S. military intends to continue to train on Oahu,
15 even though the equipment that they propose to use, the
16 Stryker Brigade, was created, surely, for continents, not
17 for small islands. Each one of these monster machines
18 weighs 20 tons; and they tell us this is lightweight.

19 However, my testimony will present facts about
20 the U.S. military's 60-year occupation and control of
21 Makua Valley, which is what I know most. I wrote Makua
22 Valley history back in the 1970s. I researched the
23 history of Makua and talked to many people in the valley
24 and wrote about their years as well as the years of the
25 military occupation. But the U.S. military refused to

1 print it. I feel that the U.S. military was unhappy
2 because they did not want all of that history to be
3 available to the public, especially to be told to clean
4 up and leave Makua Valley, which was my conclusion in
5 this report after researching how the military had
6 treated Makua Valley and the people who had land there
7 and the land itself. At that time, U.S. military had
8 control of over 6,600 acres of land, including Kuaokala,
9 Keaweahilua, as well as Makua, Kahanahaiki, and Koiahi
10 Valleys, all the way down to and including the beach, for
11 33 years. From 1942 to 1976 they controlled it all.

12 Here is something that I learned as I researched
13 the records: They forced the people to leave, paying
14 them a pittance; you know, 200, 300 bucks for their land,
15 a pittance for the land. The Heleniki Family, the
16 Kekuewa Family, the Kamaka Family. You know, all my
17 friends. I interviewed them; I talked to them. I know
18 what happened. The U.S. warplanes practiced their
19 bombing techniques as they flew into the valley and used
20 the houses of these people as targets by bombing them.

21 The military also bombed the school where the
22 children of Makua Valley had once learned to read and to
23 write. They may never read the history of Makua Valley.

24 The U.S. military also targeted the church at
25 Makua Valley and destroyed it, the building where people

1 used to meet on Sundays with their friends from other
2 communities. And the church choir used to practice with
3 John Naiwi, the choir master.

4 The U.S. military also allowed their soldiers to
5 use the gravestones in the churchyard graveyard for the
6 target practice. Go and see for yourselves.

7 Have you ever been there?

8 Go take a look. You can see the pukas in these
9 grave sites. Hewa.

10 And, of course, they bombed the beach home of
11 Mr. McCandless, the rancher who leased the valley from
12 the Territory of Hawaii.

13 And the freshwater wells at Makua have been used
14 by the U.S. military as dump sites. Today there are some
15 people, and I talked to them myself, who are trying to
16 dig the rubbish out. It's an awesome job.

17 Then there are the fires. I know there have
18 been many, many fires. One of the largest burned over a
19 thousand acres of land and even went over the top of the
20 mountain. Apparently, the U.S. military just doesn't
21 care about the environment.

22 And it is because I know the facts of the U.S.
23 military track record at Makua Valley that I now stand
24 here before you and before the United States military to
25 say that they should not bring their Stryker Brigade to

1 Hawaii. The U.S. military has no clue as to how to care
2 for land on small islands. Maybe they'd do better in the
3 continental United States; I don't know. In fact, their
4 purpose is to destroy, not to care for the land. Because
5 we live on small islands, we live in a very delicate
6 island environment. If we are going to continue to live
7 on these islands, we must preserve as much of our natural
8 flora and fauna as possible; and we need to tell the U.S.
9 military not to burn the land.

10 We know from their history that they are unable
11 to preserve our natural environment, so they should at
12 least clean up their rubbish, including their dead and
13 live bullets and bombs that are scattered throughout
14 Makua Valley; and when this is done, they should leave.

15 Unfortunately, the miles of roads that the U.S.
16 military plans to construct for these monster machines to
17 move around in our islands will further destroy much of
18 what little we have left. The Hawaiian pueo, Makua's
19 rare and endangered flora, all of this will be gone if
20 the military continues its destruction.

21 The track record for the U.S. military for over
22 60 years in Makua Valley and its adjacent valleys is
23 extremely discouraging, to say the least. They have not
24 taken care of the land. So I can only assume that its
25 plan to bring the 300 or more of these monster Stryker

1 Brigades will continue their disrespect for protecting
2 our natural environment. I think that DaVianna told you
3 what happened to Kaho'olawe, and it's going to happen to
4 Makua and it's going to happen to every other piece of
5 land that the military takes.

6 The U.S. military knows that we want the lands
7 of our islands returned. In fact, the military had once
8 promised to return Makua Valley to the Territorial
9 government; but they changed their minds and kept bombing
10 the valley. Training troops in Hawaii is part of their
11 intimidation program for the people of Hawaii. The U.S.
12 military refuses to care for the land, so I can only
13 assume that it plans to bring this monstrous Stryker
14 Brigade in to intimidate the people of these islands
15 again and again, until we accept the military as our
16 saviors. What a twist of fate.

17 Thank you very much.

18 MS. AKA: Noenoe Silva.

19 MS. NOENOE SILVA: Aloha. Talk about hard act
20 to follow.

21 Thank you, Marion.

22 I also wanted to start out by saying mahalo to
23 the A'ole Stryker 7. Somebody had to do it.

24 And I'm going to be very brief because all the
25 people before me have made all the points, almost all the

1 points that I was going to make, and much more eloquently
2 than I am able to do. But I did come up here to add one
3 more voice, to register a protest against any further
4 military expansion in Hawaii nei. And I want to
5 reiterate a couple of things very briefly.

6 Many of us are morally opposed to any Hawaiian
7 lands being used to wage war. And that has been going
8 on -- we did have our sovereignty in our own country; we
9 were a neutral country. And we have unfairly borne the
10 burden of the United States' seemingly endless expansion.

11 As you've heard here tonight, as person after
12 person has come up here, Hawaiians dearly love their
13 land. Aloha aina was a movement in the 19th century, and
14 there's a movement now. But not only Hawaiians love our
15 land. Everybody loves our land. Our land is some of the
16 most beautiful land on earth. It's so rich. Our
17 beaches, our streams, our mountains, our winds, and our
18 rains are so lovely that our kupuna named them all
19 individually. But every time the U.S. military takes
20 another acre, brings another gun, brings another tank,
21 brings another bomb here, you are bringing us closer to
22 being a target. And we know that war is real, and we
23 know that it has happened before. Our aina aloha should
24 not become a target. And I'm sure many of us would like
25 to know what the U.S. military thinks the environmental

1 impact is going to be if you draw an attack to our aina.

2 One other thing is, that often we read in the

3 paper about what good neighbors the U.S. military is to

4 us, how they take care of the land, how they protect

5 different sites, and often they tell us this every week

6 in The Advertiser, on the front page. But recently -- I

7 don't know how many people have seen this; you have to

8 turn to certain channels, like MTV and other channels --

9 but there's a commercial on television right now that's

10 part of a U.S. Army recruiting campaign, and in the

11 commercial, it's about Pohakuloa, which is where some of

12 this is planned to -- for the expansion to take place.

13 Also, I'm sure there are long-time activists here to --

14 this is probably the 200th hearing I've been to over the

15 years, and we keep telling the U.S. military that Mauna

16 Kea is a sacred place. You know this. People keep going

17 to hearings over and over again to say that very thing.

18 But in this commercial about Pohakuloa, which is situated

19 on the slopes of Mauna Kea, there's -- they actually brag

20 about taking 5,000 pounds or tons or something of

21 dynamite to blow up the side of Mauna Kea. If you

22 haven't seen it, it's shocking. It's absolutely

23 shocking. And it's lack of respect for what we have told

24 you over and over and over and what you proclaim in the

25 paper, that you're good neighbors, that you understand

1 what we're saying. And then, at the end of the
2 commercial, it says, If you want some more information,
3 you can go to goarmy.com. So I did. And I read this --
4 they have this little story; I'm sure it's a made-up
5 little story; but it goes like this: My name is Sergeant
6 Mike Leper of the United States Army. I'm an engineer
7 assigned to Pakaloha -- that's not my pronunciation. The
8 environment on Pakaloha is very moon-like because of lava
9 rock.

10 And then there's another picture, and it says,
11 We're in a caldron right in between three volcanos: Mona
12 Loa, M-O-N-A, L-O-A -- Juanita -- we don't know where
13 that is -- and Kilowea off in a distance. This is an
14 operation where we will gain all of the work material
15 that we will need for the projects that we have here
16 onsite.

17 Then the last picture, core specialists will
18 drill holes on top of the rock, then they will place
19 charges inside of these holes. They will blow the
20 quarry, and the rock face will fall. And then there's a
21 soldier, and then it says, "Charging", and then it says
22 "Explosion".

23 Thank you.

24 MS. AKA: Thank you, Noenoe.

25 We need to change court reporters, so we're

1 going to take a ten-minute break. And after the break is

2 Pookino. She will be up next.

3 (More proceedings were had on the following page.)

1 MR. CHANG: Okay. Henry Curtis, followed by

2 Kat Brady, and then Kalei Crabbe.

3 MR. HENRY CURTIS: Aloha. I'm Henry Curtis,

4 Executive Director of Life of the Land. We're going to

5 have extensive written comments, but I want to focus my

6 oral comments on one very narrow topic, and that is

7 groundwater contamination at Schofield.

8 I want to concentrate just on Schofield for the

9 moment. And I want to preface my comments by saying that

10 when Schofield Barracks was a Super Fund site, a

11 Technical Review Committee was formed to monitor the

12 military cleanup, and it consisted of the military

13 regulators and Life of the Land. The military has set up

14 Restoration Advisory Boards, which are sort of military/

15 civilian interfaces to monitor military cleanups. We sit

16 on the Central Oahu Air Force Restoration Advisory Board,

17 which monitors the military cleaning up of fuel storage

18 annexes, petroleum oil lubricant pipelines, and Wheeler

19 Army Airfield until the year 2000, when it was turned

20 over to the Army. We sit on the Pearl Harbor Naval

21 Restoration Advisory Board and the Hickam Air Force Base

22 Restoration Advisory Board. So we spend a lot of time

23 poring through military documents, trying to understand

24 their acronyms and the fact that they use the same

25 acronym to mean multiple things.

1 We also sat on the EPA/Department of Health
2 Source Water Assessment Project, which looked at
3 groundwater contamination, how you define boundaries for
4 groundwater aquifers, what types of things might be
5 contaminating it, and what the probability of
6 contamination is. And we look, also, at non-military
7 toxic sites, such as Honolulu Harbor, such as Village
8 Park, and such as Kunia.

9 Now, you may know that the EPA defines the
10 aquifer under Schofield as a sole-source aquifer. That
11 means that it's not replaceable. It provides a lot of
12 water for the island, and it is not replaceable. During
13 this past legislative session, one person in the state
14 government got this brilliant idea, Why don't we stick a
15 landfill on top of it; and that was beaten back on the
16 floor of the Senate.

17 Now there's being proposed a massive amount of
18 military development over this aquifer. And the EIS is
19 very good at looking at past contamination. The EIS
20 points out that trichloroethylene, or TCE, has made it
21 from Schofield to the groundwater and is being pumped out
22 as we speak. Although the source of it was never found,
23 it is still leaking into the aquifer.

24 They did discover the source of the tetra --
25 screw up that name -- CCL₄, carbon tetrachloride, which

1 came from the landfill at Schofield. It seeped down from
2 the landfill, into the aquifer, and it is being dealt
3 with. So the military knows that contamination on the
4 top is reaching the aquifer. That's not a mystery. They
5 have a contaminant on the top; they have a source way
6 down; they found it in the aquifer. So the EIS
7 acknowledges this past contamination but then does almost
8 nothing on describing possible new contamination.
9 They give a few sections, and it's buried in
10 three different sections of the report, which makes it
11 hard to put together; but they say, for example, they
12 analyzed 39 composite samples. Now, "composite" means
13 you take a little dirt from here, a little dirt from
14 here, a little dirt from here, and you mix them together,
15 and you hope that if any one of those samples is
16 contaminated that the blend will pass your approval
17 rating. And then they go on to say that these sites,
18 very limited in number, are representative of the
19 contamination sites and, in fact, are probably higher
20 contaminated than the sites they didn't test; and,
21 therefore, the sites they didn't test are absolutely
22 safe.
23 They say that -- there's two standards of
24 measuring, whether something is safe for an industrial
25 area or whether it's safe for a residential area. And

1 that was part of the problem that was called Barber's
2 Point Naval Air Station, now Kalaeloa, where the military
3 cleaned it up to industrial levels, but the County wanted
4 it at higher levels of cleanliness; and, therefore, the
5 military turned over the land to the State and County,
6 which couldn't use it; and hence, now, it is a largely
7 unused site.

8 The military has found that there's high levels
9 of valium, arsenic, iron, aluminum, magnesium,
10 nitroglycerin, and RDX. RDX has multiple names, like C4,
11 T4; it's a plastic explosive. These granules exist above
12 levels that are safe for residential use. They know that
13 it can get down into the groundwater; and, therefore, the
14 EIS does not evaluate it at all. We find this shocking.

15 I've been given this poster here that says one
16 minute. So I will say in the next one minute that the
17 groundwater contamination, which is pitiful, is better
18 than their section, a lot of their other sections, which
19 are even smaller in size.

20 Thank you.

21 MR. CHANG: Kat Brady, followed by Kalei Crabbe;
22 and then Kaipo Seales.

23 MS. KAT BRADY: Aloha kakou. Thank you all for
24 coming and for staying.

25 I'm Kat Brady, and I'm with Life of the Land, as

1 well.

2 I want to thank you for extending the comment
3 period. This is a very complex document, and people need
4 time to really analyze it and make thoughtful comments.

5 I hope that you ask the prosecutor to withdraw
6 all charges, because people were just expressing their
7 rights. Woodrow Wilson said, The history of liberty is
8 the history of resistance; and I hope you understand
9 that.

10 I hope, also, that you're going to hold real
11 public hearings, in real public places. Many people did
12 not even know where the Honolulu Country Club was. I
13 didn't. I had to look it up. They're not places that
14 the regular folks go. So having meetings in private
15 places and calling them public meetings is disingenuous,
16 and I hope that you rectify that by having real public
17 meetings on all the islands.

18 As Henry mentioned, we sit on many military
19 Restoration Advisory Boards. And to quote (inaudible), a
20 poet, she said, I think my eyes were knocked open, and
21 they don't close. I sometimes wish I could close them
22 and look away. But once you've seen certain things, you
23 can't unsee them. And seeing nothing is as political an
24 act as seeing something.

25 I've seen many things on the Restoration

1 Advisory Boards that have broken my heart. I have seen
2 the land that people have worked for generations, people
3 I know, whose family have worked the land for
4 generations, I've seen that land destroyed and rendered
5 unusable.

6 According to the Hawaiian Military Land Use
7 Master Plan of 1995, we currently have 210,000 acres that
8 are controlled in Hawaii by the Department of Defense.
9 112,000 of those acres are stolen land, which are
10 sometimes called "ceded land". 71,000 of those acres are
11 leased land for secondary use. 27,000 acres are held in
12 fee simple. Now the Army wants another 1400 acres on
13 Oahu and 23,000 more acres on Hawaii Island. We say
14 enough already.

15 You're squeezing out the peaceful people of
16 Hawaii with your warring ways. The impact of military in
17 Hawaii continues to be huge. The Air Force has more than
18 142 sites and 60 areas of concern. The Navy's
19 contamination of Pearl Harbor, which was our breadbasket,
20 has resulted in being designated as Super Fund, with 749
21 sites of significant contamination.

22 NC10s in Whitmore Village is another extremely
23 contaminated place. Kalaeloa has hazardous
24 contamination, many places that will never, ever be used
25 or can never be used, among all those cultural and

1 archaeological treasures in that land.

2 Henry talked about Schofield and TCE. You need
3 to understand that TCE is something that's used to clean
4 engines. And that is what that book of civil action in
5 the movie, Civil Action, was about, when people were
6 dying, kids were getting leukemia. And the way that --
7 the pathway that that got into people's system was not by
8 drinking the water; it was when they showered, because
9 the -- it evaporated, and it went into their pores, and
10 it caused massive illness in Massachusetts. And we are
11 still very concerned about Schofield.

12 Lualualei is another terribly contaminated
13 place. Makua Valley and the controlled burn, after we
14 commented on the EIS, Oh, yes, we are so sure that we've
15 got it down now; We know that we will not have a burn
16 like that again. 2500 acres this summer, gone.

17 And now you want to bring the Stryker Brigade.
18 On top of all the contamination we have now, you want to
19 bulldoze and make roads; you want to build a fake village
20 in Kahuku. We are concerned about our coastal waters; we
21 are concerned about topsoil eroding and getting into the
22 streams and blocking them up. I think Ralph Makaau
23 really said it best when he said Kahuku was waist-deep.
24 On the North Shore, we don't really have a big -- we
25 don't have sewers; so whenever it rains, we are all under

1 water. I've had a backyard under water for months in
2 some really rainy winters. So this is not something to
3 be taken lightly. This has a huge impact on people's
4 life and their health.

5 And while all this is happening, the military is
6 in Congress, asking to be exempted from environmental and
7 health laws. We have to say, as people, We're not taking
8 this anymore. This is immoral, and we are not going to
9 do this.

10 The Stryker has many problems, and I am amazed
11 that the Army would put their own people in such
12 jeopardy. There has been much written about this really
13 dangerous vehicle. The mobile gun system, if it turns,
14 it can tip over. The armor of it was not sufficient to
15 stop the types of grenades, rocket-propelled grenades,
16 that will be shot at it. And the wheels in the front
17 can't have the skirts to protect it because they need it
18 to turn. And one of the big things about the Stryker is
19 that it's fast; and that's great, the Army says. Well,
20 not all soldiers think that. Some of them who train on
21 it said there have been many, many accidents because of
22 its speed. They said that the troop carrier compartment
23 in the Stryker is so small, that when the soldiers are in
24 there, they can't even reach down and get their canteens.
25 We've now deployed the Strykers to Iraq; so in 120

1 degrees, these guys are sitting in this -- and women are
2 sitting in this little compartment, and they can't even
3 access their canteens.

4 All people need to be concerned about this. If
5 you have a son, daughter, loved one in the military, I
6 would be out here screaming. I have a nephew in the
7 military, and that's why I'm screaming. But people have
8 been saying, retired generals have been saying, this is
9 unsafe. There's a report currently circulating in
10 Congress that, basically, concludes it's poorly armored,
11 it's entirely vulnerable to rocket-propelled grenades;
12 the wheels and wells are extremely vulnerable to small
13 arms.

14 And in the EIS you talk about ranges. And one
15 of the -- well, there are so many outrageous things in
16 the EIS; but one of the most outrageous was a piece where
17 they talk about ranges, which are terribly contaminated.
18 And we know that there's depleted uranium there, which
19 has a shelf life of, like, 4 million -- half-life of 4
20 million years. But in the EIS it says, Well, you know,
21 when the ranges get too contaminated, we'll just move the
22 soldiers to another range. I say you've had enough, you
23 need to clean up your mess; you get no more land, because
24 you are taking land that can never be used again; you're
25 done; it's over; clean up your mess.

1 Aloha.

2 MR. CHANG: Kalei Crabbe.

3 Kalei?

4 Followed by Kaipo Seales.

5 MR. KALEI CRABBE: Aloha everyone here.

6 My name is Kalei Russell Crabbe. I am Hawaiian.

7 I came here with my two friends, Kaipo and Kaili, from

8 Molokai. That's where my family lives.

9 I see what's been done to our land on Oahu and

10 all the islands. The military presence has destroyed

11 sacred land. Mo'okapu, where Kaneohe Marine Base is, we

12 can't even go there. It's inaccessible to us. You can't

13 even surf there. I'm a surfer. I can't even go surf a

14 beach that I love to surf.

15 Makua Valley has been disgraced. They burned

16 it. A controlled fire just started burning towards the

17 beach, the wind shifted, it burned up the valley, up and

18 over the valley. And last time I drove there, was all

19 black; it was all burnt up. And that was a very -- very

20 disturbing image to see, knowing that that fire was set

21 intentionally; it was set to burn that valley. And I

22 didn't feel that was right.

23 And these Stryker machines, they're death

24 machines. They bring death. They do not bring life.

25 These Stryker machines should not be here in Hawaii.

1 They should not be here on any of these islands. And I
2 come before you today to tell you that the military
3 presence is not good. No more military. No more
4 Strykers.

5 Aloha.

6 MR. CHANG: Kaipo Seales, followed by
7 Marisa Plemer, then Daniel Bishop.

8 Kaipo Seales?

9 MR. KAIPO SEALES: Aloha, everyone, ladies and
10 gentlemen. I'm from the island of Molokai.

11 It was kind of a last-minute thing tonight. I
12 wasn't expecting to speak in front of you folks.

13 Starting with Kaho'olawe -- I mean, till today,
14 we have -- we have braddahs still cleaning up. They go
15 flying on the Hughies and the choppers till today, still
16 cleaning up after the mess that, you know, the Navy or
17 the -- bombed the island, and risking their lives to do
18 it, too. And that's the same thing that's going to
19 happen if this passes, you know, if this Stryker thing
20 comes. It's the same thing that's going to go on. And
21 it's -- I mean, it's just, like, another continuance of
22 the past.

23 And I have family back at home, of the Helm
24 Family, George Helm, fighting to protect the island of
25 Kaho'olawe, and then he disappeared at sea. It was kind

1 of like a conspiracy, speaking for myself and family back
2 home, Molokai.

3 Tonight we -- I'm gonna speak on how I came
4 here. It's kind of funny, actually. We was surfing down
5 at the North Shore for the surf contest, and then it was
6 like, Oh, let's go to the Jacuzzi at Turtle Bay. And
7 when we coming in through the gate, the lady at the toll
8 gate, she's like, Oh, are you guys here for the meeting?
9 And we're like, "Yeah." And then -- you know, just to
10 get in and go to the Jacuzzi; right? And then, come to
11 find out, we're sitting at the Jacuzzi, and they ask us,
12 Oh -- people come up, Oh, what room number you guys?
13 "Oh, 361." And then, come to find out, we was sitting,
14 me and my brother and my friend Kalei, who just talked,
15 we was like, "You know what? I think we better go in
16 there and say something, show face, you know, speak our
17 heart." And it just -- and then -- it just feels good,
18 just to be here and talk in front of you guys. And I
19 just want to say, you know, just -- I don't know. Just,
20 you know, how you see everyone's feelings and just to,
21 you know, malama the aina, take care of the land, instead
22 of thrashing, destroying, and bombing.

23 My mom's from Molokai and my dad's from Waianae;
24 and I was raised in Molokai. But my dad told us stories
25 about when he used to go hunt up in Makua Valley and how

1 it used to be and then how they shut it off and you
2 cannot go and -- you know, gather food, certain,
3 different, native plants, and, you know, go hunt inside
4 and get meat for the family and bring home for the table.
5 Cannot do it; it was shut off. And just to see -- and
6 especially the fire, as my friend said, that it -- we
7 went up there just to visit family and just, like, wow.
8 So -- I mean, just burnt. And it's kind of -- it's real
9 sad, just like how it is now.

10 I just want to say aloha and glad I came up here
11 before you guys and ladies and gentlemen, and you guys,
12 too. I know you guys feel the mana, feel the aloha that
13 everyone shared tonight. I just want to say aloha from
14 Molokai. Molokai (Hawaiian word).

15 Aloha.

16 MR. CHANG: Thank you all for your attention and
17 your patience. And for those of you who have been so
18 patient to -- and want to testify, we will get to you as
19 soon as we can.

20 Next, Marisa Plemer, followed by Daniel Bishop.

21 MS. MARISA PLEMER: Aloha.

22 I need to say that I did get to speak last week
23 at the first meeting. But when I was there -- when I was
24 there last week Tuesday, I spoke to Mike Egami, one of
25 your specialists, and I asked him, "What has the Army

1 cleaned up?" And I said, "Is there anything in those big
2 books that you sent us in the mail, these three huge
3 volumes, that tells us what the Army has cleaned up?"
4 And the reason I asked him that is because four years
5 ago, when I was doing research at the main library for a
6 botany class I was taking at Windward Community College,
7 I came across this book by accident; and it was in the
8 Pacific Hawaiian section. It's called the Federal
9 Hazardous Waste Sites in the State of Hawaii:
10 Compliance, Cleanup and Waste Management. Hearing Before
11 the Committee on Governmental Affairs, United States
12 Senate, August 20, 1990. And I borrowed the book, took
13 it home, and I read it, and I was never more horrified in
14 my life to read the horrible things that the military has
15 done to Hawaii. It made me really sick to my stomach. I
16 couldn't believe it. It made me go to public hearings
17 like this. It made me meet people like Marion Kelly and
18 Dr. Fred Dodge and many other people in this room, who
19 have the same concerns, Kat Brady, Henry Curtis.
20 And that's what I need to ask you, we need to
21 ask you: What are you doing to clean up these horrible,
22 terrible things that you're doing to our land, our air,
23 and our water?
24 And I see you in your uniforms, bright, shiny
25 faces, young faces, and you would never dare go to your

1 jobs or anywhere with your uniform in tatters or dirty or
2 unshined shoes; but, yet, you come here to ask us, not to
3 give you more land, not to bring the Strykers; you come
4 here to ask us to allow you to further pollute,
5 contaminate, poison our tiny little islands in the middle
6 of the Pacific Ocean.

7 Now, what I would like to ask you is: How would
8 you feel if I go to where you're from --

9 Where are you from, you three?

10 MR. KATKOW: All over the place.

11 MS. MARISA PLEMER: Where were you born?

12 MR. KATKOW: New Jersey.

13 MS. MARISA PLEMER: New Jersey.

14 MR. KATKOW: It's pretty contaminated, too.

15 MS. MARISA PLEMER: How would you feel -- how
16 would you feel if all of us Hawaiians here, all of us
17 concerned people here, all of us residents, go to your
18 homes where you were born and tell you, I'm coming here,
19 I'm bringing these big, huge, horrible machines, I'm
20 bringing TCE, every other chemical that's in this book,
21 I'm going to leave it in your land, in your air, in your
22 water, in your bodies, in your children's bodies, and you
23 should not protest, you should let us come, because we're
24 so powerful, we have so much money, we have all the
25 federal government in back of us?

1 How can you do that? How can you do that?

2 And when I went to the library today, the main
3 library, to borrow this book -- because Mike said he's
4 never seen it, never heard of it -- I was told by the
5 librarian, "This is the only book in the whole state
6 library system." But I also need to let everybody know
7 that you can get this book by calling Senator Akaka's
8 office.

9 I spoke to Kekoa today. He said, "Give me your
10 name, give me your address. We'll mail it to you."

11 This is a top secret book. You must call; you
12 must ask them to mail you this book. I have copies. I
13 made ten copies of the front page so people will know
14 what it's called and what to ask for.

15 And the other book that I came across that day
16 four years ago, doing research for that botany class, was
17 called Recovery Plan for the Koolau Mountain Plant
18 Cluster. And I borrowed this book, and I ended up doing
19 my botany project on this book. Because even though I'm
20 born and raised here, I've gone to school here, I had no
21 idea about these endemic, endangered, Native Hawaiian
22 plants and animals. Beautiful things, many of them
23 already gone, disappeared from the earth forever,
24 forever, for many reasons, not just because of the
25 military. But you're asking us to allow you to kill and

1 destroy more of these rare plants and animals found

2 nowhere else in the world.

3 Do you realize that?

4 Here is a list of some of these names. Long

5 lists; long names.

6 Have you seen this publication? Is it in your

7 EIS?

8 Your EIS is so incomplete. Your public hearings

9 are much too short, much too limited, much too

10 restricted. You have not allowed us, as residents, to

11 learn about these things that are top secret, even in our

12 public libraries, because these books, from what the

13 librarian told me today, on our native plants and

14 animals, they lost the only set they had. People cannot

15 borrow this book or this whole set of books that the

16 Department of Fish and Wildlife has done on all the

17 islands, all the plants, all the animals. I asked the

18 librarian, "How can that be? Can't you get another set?"

19 "Well, nobody's ever asked."

20 But I also found out that people can call the

21 local office of the Department of Fish and Wildlife; you

22 can get this whole set of books for free. You must do

23 this so that you learn about all our rare, endemic,

24 endangered Native Hawaiian plants and animals, so that

25 you know what's in these mountains that the Army wants to

1 go into the heart of and bomb and blast and kill,
2 destroy. The Army's mission is to kill. And I'm here
3 because, as residents, it is our mission to save.

4 Thank you.

5 MR. CHANG: We need to take a technology
6 time-out.

7 Do you guys want to take a five-minute recess?

8 We have to change the video. Five minutes,
9 okay, and then we'll resume.

10 Thank you.

11 (Pause in proceedings.)

12 MS. AKA: If Daniel Bishop comes back into the
13 room, can somebody alert me; and we'll make sure that he
14 has an opportunity to speak.

15 Joey Ibarra?

16 MS. JOEY IBARRA: This sign is part of my
17 testimony. We have signs. You have guns.

18 Who has the weapons of mass destruction?

19 I really wasn't prepared to testify tonight. I
20 would rather very much live my own life and go about my
21 business and take care of my family. I think that events
22 of the world has compelled me to step forward. So I will
23 have statistics.

24 I just want to share a little bit where I'm
25 coming from. I'm Filipina. My parents come from the big

1 island of Luzon in the Philippines. My father was a pig

2 farmer. I was raised in Honouliuli in Ewa.

3 Growing up in Honouliuli, I didn't realize the

4 extent of military debris. I remember being four or five

5 years old, being told not to play around the coconut

6 palms because there were unexploded bombs there. So from

7 very early on, I remember having a fear of wandering into

8 the bushes because there were bombs, and we weren't

9 supposed to go there. And I didn't realize how

10 militarized this whole state is.

11 First of all, I want to make a statement that I

12 am totally against the Stryker Combat Brigade in Hawaii.

13 I also want to support the extension of the

14 public hearings beyond 120 days so as many people in the

15 community can be mobilized to be instructed and informed

16 about the insidious evil of this Brigade and the news

17 that the Brigade (inaudible).

18 I also would like to support opening up public

19 hearings on the Island of Molokai -- and I thank the

20 brothers for coming forward and inspiring me and giving

21 me hope -- and having hearings on Lanai, on Kauai, and

22 Maui. The entire islands must be involved; otherwise,

23 this hearing's invalid.

24 There are three reasons why I'm in opposition to

25 the Stryker Brigade. I don't have the statistics. For a

1 long time I wanted to hide my head in the sand and not
2 get involved, but I think the world is slapping me up and
3 making me step forward; so here I am, doing public
4 testimony.

5 First of all, as a Filipina born and raised in
6 Hawaii, I want to thank the Hawaiian people, the kanaka
7 maoli, for offering me their friendship and support and
8 teaching me the righteousness of the struggle to fight
9 for justice. I am so inspired by the warriors here
10 tonight.

11 And I see -- I see more warriors despite your
12 efforts to call your many inconsequential breaks. People
13 are still here.

14 And if you take each person, each one of you
15 represent ten people who could not be here tonight.
16 Perhaps maybe you represent twenty people who are not
17 here tonight. Perhaps you multiply -- maybe you
18 represent a hundred people that are not here tonight.

19 Do you not think that we can be a powerful force
20 and, in fact, stop the Stryker Brigade from continued
21 military expansion?

22 I believe that. That's why, in my heart, I feel
23 so hopeful and so happy to see people here, people who
24 dared to come from Honolulu and break the barrier between
25 the town and country and come to Kahuku to join hands

1 with the Maori people, the people of Kualoa, Kahuku.

2 It's amazing what we can do. And this is what they want

3 to hide from us, the power of the people.

4 Now, one thing I want to get into, One, to stand

5 with the Hawaiian people, the fight for justice.

6 Federalization of Hawaiians means a militarization, means

7 you no longer have the right to claim your rights to the

8 land and to the water. That means the federal government

9 will then be able to take your land and use it for

10 whatever purposes it needs.

11 Senator Daniel Inouye is evil. His plans are

12 evil, and he must be exposed for the puppet that he is.

13 Number Two, the Stryker Brigade will make Hawaii

14 a target. When the Japanese bombed Pearl Harbor, they

15 did not bomb Honolulu, the cities, the communities; they

16 bombed the military targets. The entire island will be a

17 military target. This will not make Hawaii safe. We

18 must oppose the Stryker Brigade.

19 Number Three, you -- I come to find, very sadly,

20 as I overcame my fear of the Internet -- I was really

21 afraid of it, but I did overcome it; now I'm an addict --

22 but one of the things I did find out in exploring the

23 Internet --

24 Did you know -- first of all, how many of you

25 are Filipinos or know any Filipinos? Como esta cayo?

1 That's all the Philipino I know. But I'm sure,
2 as I link up with other Filipino brothers and sisters, I
3 will learn more.

4 But did you know that among the high echelons of
5 the military, in the high, top-level government, there is
6 an order called The Order of the Carabao?

7 It just blows my mind. Every year they get
8 together; they call -- this last year was the 103rd Wall
9 of the Carabao. The carabao is a water buffalo, and they
10 use it to celebrate the conquering of the Philippine
11 Islands, which is the furthest extent of the U.S. empire,
12 in 19 -- in 1898. They even have a song; they all sing
13 together. Colin Powell was there this year. They all
14 chomp on cigarettes -- on Cuban cigars, and they sing
15 this song.

16 I want you to know that there is a phrase that I
17 learned as I became awakened; there's a phrase about the
18 fighting Filipinos. And it's very relevant to the fact
19 that we're here in a hotel that is attempting to squash
20 the efforts of the laborers, many of them who are
21 Filipino, from unionizing and fighting for their workers'
22 rights. My uncle and auntie were workers of the coco
23 plantation that was closed down, and those workers were
24 offered jobs here on this hotel; and now they face the
25 same fight. And, I tell you, there is a tradition among

1 the Filipinos: We are fighters.

2 Okay. I just want to show you how racist, how
3 racist this military organization is and how racist is
4 their attempt to stop us from speaking to each other and
5 dialoguing and getting information. They have this song
6 they all sing together, a thousand of them in the
7 ritziest hotel in Washington D.C. And it goes like
8 this -- and they all know the song by heart. It goes,
9 When the bull men were busy all night long, when the
10 thieves will steal and lie and Americanos die, then you
11 heard the soldiers sing this evening's song. Damn, damn
12 the Filipinos, cocky-colored thieves, underneath the
13 starry flag. Civilize them with a crag.

14 A crag is a machine gun. This is a song the top
15 leaders of this country sing and how racist they are.
16 This is why I am totally against the Stryker Brigade,
17 because I am fearful.

18 Who are you using these tools against? Against
19 my Filipino brothers and sisters who are fighting for
20 justice and liberation in the Philippines? Against
21 people in Korea, who want to re-unite their country?
22 Where the heck are you planning to use this? People in
23 Los Angeles who are fighting for justice against
24 discrimination and racism?

25 I oppose the Stryker Brigade. And, I tell you,

1 I am not the only one who will rally behind this to stop

2 this coming to Hawaii.

3 (More proceedings were had on the following page.)

1 MS. AKA: Next we have Lono Correa and then
2 Kathleen Kelly.

3 MR. LONO CORREA: Following on what the
4 previous speaker said. Filipinos organized their country
5 when they overthrew -- when the Spanish were kicked out,
6 they formed a government. They had a congress. In fact
7 their constitution was modeled after the United States
8 Constitution. As a result they got the U.S. Army in there
9 and they killed 200,000 of them. So we have an identity
10 with the suffering of people like that.

11 By way of introduction my name is Lono
12 Correa. I'm a veteran. I served in the Army. I still
13 have my medal and my discharge. I'm also a descendant of
14 the chief who killed Captain Cook. (Applause)

15 Anyway, aloha kakou.

16 AUDIENCE: Aloha.

17 MR. LONO CORREA: Visitors to our islands
18 often say that Hawai'i is a special place. It is special,
19 they say, because not only because of its incomparable
20 natural beauty but because of the people who call these
21 small precious islands their home.

22 Hawai'i's people, so varied in backgrounds,
23 cultures, economic circumstances and ethnicities somehow
24 manage to live together in an amazing example of human
25 brotherhood and sisterhood.

1 What is the reason, the cause for this
2 unparalleled harmony of people's very different from each
3 other? I believe that the essential element, the crucial
4 factor which is responsible for this rare display of human
5 peace and harmony is us, the kanaka ma'oli, the indigenous
6 peoples of these small bits of land in the middle of the
7 vast Pacific Ocean.

8 It is our aloha, a very misused word, that
9 is the glue that holds together such diverse peoples in
10 peaceful productivity. Because human harmony on this
11 scale is so rare in the world and kanaka ma'oli are the
12 peoples whose attitudes, beliefs and practices have
13 produced this feat, it is sensible to ask why it is that
14 kanaka ma'oli possess the qualities that engender peaceful
15 human relations.

16 I suggest that these qualities arise from
17 the unique, incredibly deep and abiding love that kanaka
18 have for this special place. From a connection to our
19 `aumakua ancestors, to the god's themselves and from the
20 respect and love that connect kupuna to makua to opio.

21 This connection of generations spanning
22 thousands of years has, I submit, been the wellspring of
23 aloha that issue from kanaka to serve as an example to all
24 the peoples of all the world.

25 From the birth of us as a distinct people

1 descendants from the kalo, our beings permeate this realm,
2 this a'o. Our ancestors' bones lie everywhere on and in
3 this 'aina. Our `aumakua inhabit every nuke, every cranny
4 of Hawai'i nei.

5 Because we are possessed, we do not possess
6 the land. The land possesses us. We are offended,
7 injured and angered by strangers who come here and through
8 force of arms destroy our land, destroy our history,
9 destroy our essence. That is why we are protesting this
10 latest insult, this latest injury as proposed by those who
11 have the guns.

12 I believe in a karmic universe. I believe
13 that actions have consequences and that evil actions have
14 certain and cosmic reactions.

15 By incrementally destroying us, the
16 children of this land, you invite your own destruction.
17 9/11 did not occur in a vacuum. (Applause)

18 Yes, Hawai'i is a special place, but more
19 than that, much, much more than that, Hawai'i is a
20 spiritual place. Your past actions and your planned
21 actions are nothing less than sacrilegious committed on,
22 in and to this altar that is O'ahu, and is all the islands
23 of our homeland. (Applause)

24 MS. AKA: Kathleen Kelly, Danny Li and
25 then Sebastian Blanco.

1 MS. KATHLEEN KELLY: Aloha.

2 AUDIENCE: Aloha.

3 MS. KATHLEEN KELLY: My name is Kathleen

4 Kelly. I'm a registered nurse at a local hospital here

5 for 20 years on the same floor.

6 I want to talk about why, why I believe the

7 Stryker Brigade is -- and the retooling of the U.S.

8 military is not helpful and is not going to be effective.

9 I believe that the United States government

10 takes honest sentiments of patriotism. People want to be

11 proud of the country they live in. People want to love it

12 and contribute to it.

13 And it takes these motivations and uses

14 them via the military to defend the interests of big

15 corporations, the interests they have in natural resources

16 often in other countries, raw materials for making steel,

17 rubber, copper, tin, gold, uranium, silver, oil, water.

18 They need to control the land upon which these resources

19 sit.

20 In our case we are a colony. We are a

21 military outpost. Then there's the question of the huge

22 profit-making golden egg that the U.S. Army, the Air

23 Force, the Navy and the Marines itself is. It's just a

24 sick merry-go-round. The U.S. Government in its

25 aggressions feeds this huge appetite for profits that the

1 munitions corporations, Boeing, General Dynamics, U.S.

2 Steel have.

3 Then there are all the industries that
4 provide the infrastructure for this goose: The uniforms,
5 the food, the computers, the communication system. It's a
6 bigger list than I could have ever imagined.

7 The solution you offer, a playground for
8 your rampaging arrogance of power, is old fashioned, male
9 dominated. It's destructive, it's wasteful and it doesn't
10 work. Why not try to unravel the knot? Try to unravel
11 the knot. Why not try what could be the most significant
12 experiment of the 21st Century: Israel gives back the Arab
13 land that it occupies.

14 The alternative is to go on, try to blast
15 your way into people's minds. What is the relevance of
16 mentioning the Israeli problem? It is part of the problem
17 of terrorism, a poor man's rebellion and it's a
18 justification for your Stryker Brigade and for all these
19 sorts of useless schemes.

20 Our foreign policy endangers Americans and
21 isolates us in the world. (Applause) It's crooked and I
22 don't want any part of it. And I implore you to call the
23 prosecutor's office and advise them to drop the charges
24 against the Stryker 7. Thank you. (Applause).

25 MS. AKA: Danny Li, Sebastian Blanco.

1 MR. DANNY LI: Aloha.

2 AUDIENCE: Aloha.

3 MR. DANNY LI: Good evening. My name is
4 Danny Li. Before I give my two cents worth of testimony
5 I'd like to give one of somebody who couldn't be here
6 tonight. His name was Brigadier General Smedly Butler.

7 Even though the words he composed were
8 about 60, 70 years ago, if I can just read it you can
9 substitute your contemporary equivalent. You can see how
10 relevant they are today to the very purpose of why these
11 Stryker Brigades and the whole role of the U.S. Army and
12 the military. This is that he said.

13 "I helped make Mexico, especially Tampico,
14 safe for American oil interests in 1914. I helped make
15 Haiti and Cuba a decent place for the National City Bank
16 boys to collect revenues. I helped in the raping of half
17 a dozen Central America republics for the benefits of Wall
18 Street.

19 "The record of racketeering is long. I
20 helped purify Nicaragua for the international banking
21 house of Brown Brothers in 1909, 1912.

22 "I brought light to the Dominican Republic
23 for American sugar interests in 1916. In China I helped
24 to see that Standard Oil went its way unmolested."

25 All we have to do is to substitute

1 Halliburton, Bechtel, General Dynamics. Is there anything
2 new? This is what he said in conclusion.

3 "I spent 33 years in the Marines, most of
4 my time being a high class muscle man for big business,
5 for Wall Street and for the bankers. In short, I was a
6 racketeer for capitalism."

7 AUDIENCE: Yeah.

8 MR. DANNY LI: That's what the ultimate
9 purpose of these Stryker Brigades are. Make no mistake
10 about it. (Loud whistles) Make absolutely no mistake
11 about it.) (Whistles)

12 Without Macdonald Douglas there wouldn't be
13 McDonald's. That's what it boils down to.

14 Okay. Now to the question of environmental
15 impact. What I'd like to say just a few words, actually
16 two words I think. But going back, I think a few of the
17 previous speakers already speak to. The most important
18 predictor of future behavior is past and present behavior
19 and practice. That is absolutely true.

20 Today all we have to do is look as far as
21 possible environmental impact and the stewardship of the
22 land, look at what's happening. I have two words for that
23 depleted uranium. Okay. (Applause).

24 It may be far away, it seems, like, Iraq,
25 but it's not. It has direct impact of the whole record of

1 what this Army, the whole military does. And it's not
2 true that they haven't found weapons of mass destruction
3 in Iraq. It's just that those weren't Iraqi ones that
4 they couldn't find. There are tons and tons of depleted
5 uranium weapons found, if they care to look. And they're
6 made in the USA.

7 If this is the record of what they do, you
8 can predict what the future might be. (Applause).

9 MS. AMARAL: Mahalo. Sebastian Blanco
10 followed by Marie Keawemauihili followed by Lisa Mitchell.

11 MR. SEBASTIAN BLANCO: Good evening or good
12 morning. I don't know anymore. My name is Sebastian
13 Blanco. I wasn't born here. I'm not from Hawai'i. I
14 moved here a little over a year ago.

15 I don't know a lot of the personal
16 experiences that people have shared tonight of the
17 destruction of these lands. But I -- and I have seen --
18 I do know and I have seen the destruction of the military
19 around the world. I went to Berlin many years when I was
20 younger and I saw the way that the military super powers
21 divided that land and divided those people.

22 I've traveled in third world countries. I
23 see the Army active there in Japan. So speaking from a
24 global perspective I'd like to share a few questions for
25 the people here tonight. First, somewhat facetiously, but

1 does the EIS -- I did not see it addressed in there -- the
2 environmental impact of holding no meeting in Honolulu, no
3 public meeting. I have to come all the way up here to
4 speak to you.

5 It's very good that you go to the
6 communities and try to listen to everyone or at least make
7 that attempt. But many of us had to drive for hours to
8 come here. Where is that noted in your report? That's
9 only somewhat facetiously.

10 Secondly, and this has been addressed a
11 little bit, but what is the environmental impact of when
12 the Strykers will actually be used? Had there been a
13 Draft EIS of the CIA training Osama Bin Laden, would it
14 have included the 3,000 dead in New York City? No,
15 because you don't know what will happen when you bring
16 military into the land.

17 You don't know. You cannot contain what
18 happens when military is brought to a place and when it's
19 used to attack people. So you bring the militaries here.
20 I'm sure all the military people here know that Al Qaeda
21 has already said they wanted to attack Hawai'i because it
22 has symbolic value. A strike here is very symbolic to
23 them. And bringing more weapons it here makes that more
24 possible that it will happen because this will be more of
25 a target. This has already been mentioned but I wanted to

1 bring it up.

2 The final thing I wanted to do tonight is,
3 we've heard a lot about the signholders and the signs
4 tonight, but there's no record of them in the official
5 record. There's been no noting of them. So I would like
6 people, if you're close to a sign or if you see signs
7 around you, to hold them up. And I'd like to read them so
8 they get in the record. We see them. The video cameras
9 see them but we want them to be noted so they're in the
10 report.

11 I'll just go around the room. We have
12 "Stryker Fires. Endangered species killed."

13 This "Follow the money" sign was talked
14 about earlier.

15 "Stryker: 19 million rounds, 20 percent
16 more bombs and bullets."

17 "Stop the U.S. warmongers."

18 "Don't bring Stryker here."

19 "Stryker equals not safe for children."

20 "No Strykers."

21 "No war for empire"

22 "'A'ole no military expansion."

23 "Stop the military land grab."

24 There are many of the yellow signs that say

25 "No Strykers. Clean up your mess."

1 And "'A'ole no military expansion."
 2 "Just say no to Bushido which is U.S.
 3 Empire."
 4 "Say no to the 20-ton axis of evil."
 5 "Resist."
 6 "Say no to endless war."
 7 "Strykers toxic." Something on the bottom
 8 of it.
 9 "Education not militarization."
 10 Oh, "Toxic threat."
 11 "U.S. military out of Hawai'i."
 12 "U.S. military policy in Hawai'i shame
 13 shame."
 14 "Pilau."
 15 "Enough before Stryker. No more mess. No
 16 more bombs."
 17 "EIS invalid."
 18 "We have signs, you have guns. Who has the
 19 weapons of mass destruction?"
 20 "We are the world," showing raised fists.
 21 More of the yellow signs.
 22 "No Strykers. No military land grab."
 23 "Aloha 'aina. Human survival."
 24 "No land theft. No killing machines."
 25 And "Stop the war machine."

1 I know there are others around the room.

2 But I just wanted that the noted this many signs such a
3 wide variety in the record. (Applause)

4 And I think it's important to note that so
5 many different people are here speaking out against the
6 military and against the Strykers coming here.

7 This is the long haul. You will try to put
8 it -- Inouye has already said this is a done deal. So you
9 may think you're having this little sham hearing and it's
10 all very good. We will resist this. Many people will
11 resist this. You don't know what you bring upon
12 yourselves when you bring the Strykers here. But you will
13 see. Thank you. (Applause, whistles)

14 MS. AMARAL: Marie Keawemauhili followed by
15 Lisa Mitchell followed by Carolyn Hadfield. Marie, if
16 you're here wave. Okay, not here. Is Lisa Mitchell? You
17 here? There you are. Followed by Carolyn Hadfield
18 followed by Pete Doktor.

19 MS. LISA MITCHELL: I don't really have
20 anything prepared even if I've been here all night long.
21 Mostly I just wanted to say like the young gentleman,
22 Hawaiian gentleman said earlier, you've heard so much
23 mana'o from this room. I'm shocked and extremely
24 impressed by the comments that have been made tonight.

25 And I feel very, very strongly like you

1 have to be listening and really hear the -- what the
2 people are saying. And I just thank you folks for the
3 opportunity, though, to, finally for us to be able to say
4 something, you know.

5 We love our land. I know you folks must
6 love yours. We're all in the same place really, you know,
7 one little planet Earth. Again, Hawai'i is such a tiny
8 little speck of this planet. We need every, you know, bit
9 of it to bring life not death.

10 I hate to be critical but as far as the
11 military thing goes I just wanted to share this little
12 story. I was doing a teaching little stint at one of the
13 little elementary schools here in Kalihi. We have a huge
14 influx of Marshallese people.

15 A little boy, beautiful little kid, you,
16 know, not doing good in school. That's what I was his,
17 like, little teacher, a group of kids not doing so great.
18 They're trying to learn English. My job was, is to teach
19 them the English language, which I speak really well.
20 Actually I was raised in a military area. I had a lot of
21 military friends so had no complaints that way.

22 But this kid from Micronesia Marshall
23 Islands, and all he wanted to know why does he live in
24 Hawai'i. Why was he taken away from his home, you know?
25 I didn't really have an answer. So I went and looked up

1 Marshall Islands, stuff like that on the Internet. Come
2 to find out the history of that place was shocking to me.

3 You know?

4 The bombing that took place after the war
5 was over, after World War II was over. Okay? They said
6 100 times worse than the A Bomb dropped in Japan they were
7 doing these tests. Okay. The military -- the United
8 States won that -- those group of islands. Those group of
9 islands were entrusted by the United States, okay, to take
10 care of.

11 What did they do? They bombed atomically,
12 hugely, worse than Japan. Okay. That's what I read on
13 the Internet. I was shocked. For 12 years after the war.
14 Okay? Entrusted by the United States of America to take
15 care of this place.

16 So, okay, here we are 2003, 2002 at that
17 time, okay? We got this huge influx of Marshallese people
18 now on our tiny little rock of O'ahu. Okay.

19 We're forced, you know -- we're going to
20 teach these kids English up to these standards that the
21 president has set, you know?

22 I didn't feel like teaching him English.
23 Okay? I just didn't. That was my job, yeah, so what's up
24 with that, you know? (Applause).

25 This is a very recent article: "Homeless

1 tent city idea raises outcry." Okay? This is out in
2 Waianae. They want to put up a tent city out there
3 because there are so many homeless people. Where the hell
4 is everybody living? Okay? Where is everybody living?

5 You guys got Hickam Air Force base. I was
6 out a couple, few years ago, four or five years ago the
7 Lions Club invited some Air Force person to speak. She
8 talked about how they're leaving the military, the Air
9 Force was leaving Hawai'i.

10 I did census a couple years ago, believe it
11 or not, on Hickam. All this incredible land, beautiful,
12 beautiful land that we don't have access to. Okay?

13 But we got homeless, homeless all over the
14 damn place, not just out in Waianae. Okay? And it's
15 getting worse. Am I -- it's getting worse.

16 That's what's scaring the s-h-i-t out of
17 me. Okay? What the hell are we going to do? That's what
18 I want to know. Okay? This land grab has got to stop.
19 And you guys -- I heard this thing called turning the
20 swords into plow shares. Okay? Did I say that right, you
21 know?

22 This cannot happen. And we have to find
23 peaceful solutions to making our 'aina better for all of
24 us. Okay? Including you folks. There's just got to be a
25 way to do better than we're doing.

1 I tell you I have a sister-in-law who used
2 to work for the federal government in peace. So I just
3 wonder, you know, let's use our resources better. We just
4 got to do it. Okay?

5 I think you guys -- I've been watching you
6 guys all night long. I feel like you guys are really
7 sincere. I feel like you guys care. I feel like I want
8 you guys to care about what everybody is saying. It's so
9 important, you know?

10 No, they care. They got to care, right?
11 Well, again, I go back let's make good changes. Let's
12 make the changes that are needed for real. We talked
13 about the reality and stuff, you know. We need to speak
14 to that. So thank you very much.

15 (The proceedings are continued on the
16 following page)

17

18

19

20

21

22

23

24

25

1 MS. AMARAL: Carolyn Hadfield, followed by

2 Peter Doktor, followed by Bokdong Yoon.

3 Carolyn?

4 MS. CAROLYN HADFIELD: Hello.

5 A short time ago, a person came over here to

6 talk about globalization and what the U.S. had done in

7 his country. He was from Cambodia. He spoke about the

8 hatred of the people of the U.S. in Cambodia because of

9 the effects of globalization in that country. He was a

10 human rights worker. He was from a village. And when he

11 stood up, he was missing one leg; and he said that he

12 was -- had his leg blown off by a U.S. land mine in

13 Cambodia. He said that when he came to Hawaii, it was

14 the most frightening thing that he had ever done beyond

15 living through everything that happened in Cambodia; but

16 coming to Hawaii meant coming to the places where the

17 bombs came from. It meant coming to the place that, to

18 him, meant death and destruction. And someone in the

19 group, we were talking about him, said, "Well, don't you

20 think about it with tourism and things like that, palm

21 trees?"

22 He said, "I didn't even know they had palm

23 trees. I just knew they had bombers."

24 You know, it really struck me, that people hate

25 the U.S. and the legacy of what it has meant in countries

1 around the world. Sometimes we feel very alone when we
2 oppose the military. Sometimes we think it's so huge,
3 that we can't do anything about it. The people of the
4 world are against the U.S. military; they're against the
5 domination; they're against the occupation. And that's
6 what these Strykers are about. The Strykers are not to
7 fight conventional warfare. The Strykers are to fight
8 urban warfare. They're tracked vehicles that are going
9 to be used in the cities, in Manila, in Indonesia, in
10 South Asia, where my friend in Cambodia was. They're
11 going to be used against people who are fighting, who are
12 rebelling against everything the U.S. is doing to occupy
13 and destroy their countries, just as inside the
14 United States. We have a long ways to go, in talking
15 with people, in meeting with people, and getting down
16 with people about what's really happening in these
17 islands. But this island is, like a Hawaiian activist
18 said, the head of an octopus, that is spreading, is
19 spreading across the Pacific Rim, and this head, that
20 head is where we're living, and we have to take
21 responsibility for that. If we do not, we are complicit.
22 These Stryker vehicles are going to be traveling
23 across the streets of these cities, and we are going to
24 have to speak up and say, "What did we say? What did we
25 do when those people came to train with their Strykers on

1 this land?" Enough. We have to kick them out. We have
2 to stand with the people of the world. We have a lot of
3 people with us. We cannot give up.

4 Thank you.

5 MS. AMARAL: Pete Doktor, followed by
6 Bokdong Yoon, followed by Kalei Crabbe.

7 MR. PETE DOKTOR: Aloha kakou.

8 You guys see this sign?

9 You guys see the message, but the message isn't
10 really the message here of me holding the sign.

11 If you look really closely, see how the sign is
12 all bent up and rumpled?

13 Okay. That's rumpled like that because while I
14 was trying to help support, protect kupuna, Kekuni,
15 70-year-old -- 79-year-old man, from getting crushed by
16 the security guards, this is what they did to our signs.

17 My point of this is, just as your EIS is talking
18 about impacts that can be seen, some of the bigger, more
19 important impacts cannot be seen with our eyes. Toxic
20 chemicals, whether RDX, TNT, HMX, nitroglycerin, arsenic,
21 PCBs, etc., etc. Sure we have these physical
22 contaminations; but there's also others, the impacts,
23 culturally, psychologically, sociologically, and
24 spiritually. And there's also the impact on what's
25 unseen. I heard another speaker mention about we don't

1 know what's going to happen in the future. And part of
2 that unseen is future generations and the youth of today.

3 I testified before, and I mentioned working with
4 high school youths; and they're easy 90 percent across
5 the board opposed to increased militarization. I don't
6 want to repeat anything from the last testimony. I
7 just -- they know I'm here, and they asked me to, you
8 know, mention that a lot of the youth here are opposed to
9 this. Of course, their voices are not being heard.

10 So why is it that the youth would be opposed to
11 the Stryker?

12 And there's probably a lot of different reasons.
13 But one of them, I would say, is that in their youth they
14 still have some common sense left, right or wrong.
15 Adults are like, Oh, no, that's the way it's been, and
16 that's just -- that's life, son, and you just -- I know
17 it sucks, but that's just how it is. I heard that from
18 my Marine Corps father, you know, three wars, 27 years.
19 Or shigataganai, the Japanese, that's just -- just deal
20 with it.

21 But you know what? We create our own problems;
22 right?

23 Humans create most of their problems; so that's
24 why we can fix our problems, too.

25 The thing is, if war really solved problems,

1 then why the hell would we have so many?

2 This is one of those no-brainers, you know, that
3 even high school students can see that. But, no, we keep
4 trying to solve our problems the same way, you know.

5 We're not stupid. We know this is about the
6 EIS. We're not ignorant to the fact that that's what the
7 folks really want to be talking about. But, you know,
8 we're here to hear you out. But the thing is -- you know
9 why we got those signs? Because you don't listen; that's
10 why. If you know the teachers out here need visual aids.
11 That's why we have the signs, because, you know,
12 governments, politicians, and military, they're not
13 listening to the people. And I say that at a time when
14 we have the largest demonstrations in human history
15 against these latest wars and (inaudible). We make
16 (inaudible) of people are on the streets demonstrating.
17 We're going -- we have our agenda. That's how it is.

18 Now, you see this shirt? Obviously it's from
19 Okinawa. I got this shirt as part of a demonstration
20 where 20,000 -- 27,500 people joined hands around Kadena
21 Air Base, the largest air base outside of the United
22 States; and we had more than enough people to circle the
23 entire military base. And these are people of all ages
24 and backgrounds. They're all fighting against U.S.
25 military. You can see the back: No more bases.

1 Do they listen? No.

2 We had a referendum in Okinawa in '97; 87

3 percent of the people voted against the military.

4 Did that stop the U.S. or Japanese governments?

5 No. They don't listen to the people. So that's why

6 we're here.

7 Now, this shouldn't be a surprise. I mean, your

8 own Commander-in-Chief, AWOL Chickenhawk, you know, he

9 didn't even get a majority vote after they did the

10 recount, and yet he's -- I don't know. I feel bad for

11 the military people because they're being used as

12 puppets. And I hope -- I hope they think like me: Cut

13 your strings and think for yourself instead of just the

14 chain of command, chain of command, you know. You're

15 just listening to that -- that (inaudible because of

16 applause).

17 You know, I didn't bring my -- you know how,

18 like, in the Iraq war they had the 52 war criminals,

19 little deck of cards?

20 Well, I don't know if you knew, the military

21 personnel knew, that there's a deck of cards of war

22 profiteers. I didn't bring my deck with me. But the

23 point is, I'm tired, as someone who grew up in the

24 military and has had prior service in the United States

25 Army, that all this profiteering of sending other

1 people's sons and daughters out.

2 You know, on September 10th, 2001, before 9/11,
3 I'll never forget in The Advertiser, there was in the
4 editorial section, there was a statement from the
5 Honolulu Chamber of Commerce, and they were touting the
6 benefits of the military, because at that time Makua was
7 under fire, it was in the court and so forth, and the
8 military was getting a bad rap; so the Chamber of
9 Commerce stepped up, and they said all these reasons why
10 they supported the military. You know what? All of them
11 were economic. It was about all the benefits, all the
12 jobs, and all that and stuff. And that's B.S. to be
13 using, you know, other people's sons and daughters to
14 make money off.

15 So what we're asking for is real security, not
16 your so-called national security, but real security,
17 clean, safe air, land, water, food, affordable shelter,
18 health care, sustainable jobs, and the economy. I know
19 that's not your job to do, but that's what we're here
20 representing.

21 And I want to say something as one of those
22 people that was arrested. Actually, I want to extend
23 some -- a lot of aloha to the security guards and the
24 police that arrested us because -- I don't know if the
25 media caught this, but I was right there in front, and I

1 saw tears in some of the security guards' eyes. And even
2 Rags broke down. He had a little emotional breakdown.
3 And that was because his conscious was being touched. He
4 knew what was pono. He knew what was right. And they
5 resent the fact that they gotta do this job because they
6 gotta pay their rent or because they're doing what
7 they're supposed to be told; and they know it's wrong,
8 but they gotta do it.

9 And when I mentioned the 27,500 people in
10 Okinawa, I mean, we would have that kind of numbers here
11 in Hawaii, but too many of us in this military outposts
12 are brainwashed, thinking that we gotta submit to the
13 system and all these other excuses that -- you know, the
14 adults coming up and make excuses for it.

15 So I get to the closing. We hear your EIS
16 claims, and I personally appreciate the fact that you're
17 trying to destroy the aina as kindly and gently as
18 possible. However, your track record of broken promises
19 doesn't look good. The history of war profiteering and
20 the creations of crisis de jure don't convince us. So
21 hear us now: No more military.

22 Now, I'm going to go to work in about six hours
23 to a dilapidated school, where there's shortages, fire
24 hazards, broken facilities, underpaid teachers. You
25 know, I did some searching on the Internet; you don't

1 realize the price of just one of those 296 armored
2 vehicles. Just one is 1.5 million dollars. And they
3 want to bring -- and I go to this school and I see these
4 kids, and I'm just like, This doesn't make sense.
5 So I will end with a quote on that from
6 Dr. Martin Luther King. And, simply said, quote, A
7 nation that continues year after year to spend more money
8 on military defense than on programs and social uplift is
9 approaching spiritual death, end quote.

10 So I would say that the military has become a
11 social cancer; it's like a white blood cell run amuck.
12 It's become an autoimmune disease. It maybe had a
13 function in the past, but it's archaic now. And it's
14 destroying us. And I'm going to go against military
15 logic: You cannot save the village by burning it, okay.
16 You save the village by malama aina, by aloha aina, by
17 taking care of it.

18 So -- and I want to send an aloha for listening.
19 And I know we're all tired and you've got to listen to us
20 all week. A lot of us have been here, too, with you.
21 And I just hope some -- maybe -- maybe your conscious
22 will be reached after all this, because there's no
23 winners. There's no winners in this war.

24 Aloha.

25 MS. AMARAL: Bokdong Yoon; Kalei Crabbe; and

1 Mata.

2 MR. BOKDONG YOON: Hello, aloha.

3 I'm a veteran of two wars, actually. First was

4 Korean War; second war was the Vietnam War. I was born

5 and raised in Korea, born during the Korean War. And the

6 Vietnam War, I was in the Marines; I went AWOL. Lucky I

7 had parents who helped get me out.

8 I participated in this action against the

9 Strykers because I felt that I needed to make a stand and

10 in the process was arrested in supporting my sisters and

11 brothers who were arrested. And I wanted to -- well,

12 actually, what I want to do is -- I believe -- I know

13 that the sisters and brothers here had already talked

14 about what's happened here regarding the Stryker and all;

15 but I want to talk about the occupation; and that, you

16 know, the occupation in Afghanistan. But what people

17 don't know is what the occupation of Korea was and why

18 it's called The Forgotten War.

19 I was able to -- I was honored to participate --

20 I was invited to participate in July of 1989 in the First

21 International Peace (inaudible) March in Korea. And it

22 was to be held both in the North and the South, South

23 Korea and the Democratic People's Republic of Korea.

24 Unfortunately, we were not allowed in the South; but we

25 were able -- we were invited to the North. And in the

1 process, from -- marching from Mt. Hala, which is the
2 northern legendary -- legendary northern-most mountain of
3 Korea, down to Panmunjom, I witnessed some things that I
4 felt is kind of embedded in my memory. And this has a
5 lot to do with the U.S. military and a lot of what -- the
6 experiments that they've been doing, not only in Hawaii,
7 but also in Puerto Rico and the indigenous lands --
8 Indian lands of the Native-Americans.

9 But what happened is, during the Korean War --
10 if you don't believe me, check [www.Koreatruth-](http://www.Koreatruth-commission.com)
11 [commission.com](http://www.Koreatruth-commission.com). They have factually based research, the
12 bacterial, the chemical, biological material weapons that
13 were used against the people of the North, and even in
14 the South, during that time; and this is true. And a lot
15 of that -- those experiments were -- we're talking about
16 experiments that were -- biological experiments that were
17 done here in Hawaii are more like -- were more than
18 likely being done way back during the 1940s and '50s,
19 also here and elsewhere, to be used against countries
20 such as Korea and, of course, Japan, the bombings in
21 Afghanistan and Ghana.

22 But there was also -- what I experienced, too,
23 was to see near the Saudi city, near Kasaan, which gas
24 chambers were built, the United States military to gas
25 people under (inaudible), towards the south, when the

1 guerilla -- the Chinese people's armies joined up with
2 the Korean people's army to push back the American
3 invaders and the U.N. occupiers.

4 There was another thing that kind of really
5 shocked me. There was a -- there was a -- our delegation
6 was taken to a barn house, a barn house in which it was
7 all pock-marked, black, and other kinds of coloring; and
8 what had happened is -- this is just one incident; there
9 are many incidents -- about 600 men -- excuse me -- women
10 and children were put into that barn house by GIs, U.S.
11 military, gasoline was poured, the doors were locked, the
12 gasoline was poured in there and lit on fire. These
13 people were burned to death for living just in the area.
14 And they were villagers; they weren't fighters, you know.

15 And these -- of course, you've heard of the
16 atrocities committed on people trying to, you know, cross
17 bridges and being shot by the airplanes. These are
18 military airplanes that were more than likely brought
19 over from Hawaii and sent over to be used in Korea.

20 So I feel that what the United States military
21 has to do in order to redeem itself is to just get the
22 hell out of Hawaii, to get out of Korea, and -- the
23 immediate -- the threat is not from the North; the threat
24 is coming from the United States. It always has been,
25 since 1945. The Soviet Union left in 1946, but the

1 United States continued to occupy the South. And I
 2 believe that the only way that the U.S. can be giving a
 3 bright light in front of -- to people of the world is to
 4 withdraw its occupation forces from every country that it
 5 continues to occupy.

6 Mahalo. Thank you.

1 MR. CHANG: Kaleihao Crabbe, Bob Matta.

2 MS. KALEIHAO CRABBE: Aloha kakou. I've
3 been here 40 years. My children were born and raised
4 here. We lived in a really remote valley on Maui. We
5 used to drink the water from a stream which took care of
6 the auwai. I've been told you can't drink that water
7 anymore. That was only 30 years ago.

8 I back every testimony that I've heard
9 tonight except for the first one. We've had 60 of them.
10 That's 59 to 1. Is the public's opinion clear enough?
11 You should be ashamed for arresting Uncle Kekuni, our
12 kupuna, who saves people's lives for a living. If you
13 were ill and you went to him, even though he knows who you
14 are, he would visit your place, he would still take care
15 of you because that's aloha.

16 That's the trait that maybe you come here
17 for your job, but you kind of get sucked in. A lot of
18 people stay because they feel this love that people give.
19 It's your duty, I think, to malama their 'aina, take care
20 of the land, take care of your own future children,
21 grandchildren.

22 The Stryker 7 deserve reparation because
23 last week's arrests were obviously illegal. It's not a
24 matter of should it be proper or not. There was no
25 legality to it. Because here in the room tonight you have

1 all the signs, the same signs they were told they couldn't
2 walk across private land and hold.

3 So that was nonsense, outrageous. I'm
4 standing here at the end of the night because everyone
5 gets up to give their mana'o. But every time these
6 hearings are held everyone speaks, but nothing happens to
7 change the planned event. You go ahead anyway.

8 So it kind of feels like casting Polynesian
9 pearls before swine for me to even get up and speak.
10 These why I'm number 57.

11 So I have to hesitate in saying anything I
12 have to say, you know. Maybe I should just leave it up
13 there where I kind of work on the spiritual kinds of
14 things I work on to try to save the Hawai'i I love. But
15 in honor of the people who stay and do make an effort to
16 speak I'll go ahead.

17 It is manipulative and democratically
18 defeating to hold a public hearing on private venue and
19 then bring in this subarmy of police to enforce your dirty
20 work, all of whom live here, have lived here for more than
21 a few years of active duty, who's grandchildren will be
22 affected by the fallout of your military, which is all
23 that can remain.

24 And we have -- we have seen by your lack of
25 cleaning up the damage that you have already done at all

1 the other sites like a kid that doesn't want to clean up
2 his room and it's dirty. But instead of cleaning it up
3 you say, "Just give me another room. I want a new room."

4 Your methods and actions in both venue of
5 hearing and cleanup are very weak for big boys who like to
6 play with such big and dangerous toys.

7 Your non-fulfillment of your treaties with
8 the Hawaiian nation are leading to a wide-spread cancer
9 that is spreading across the state. The organ that is
10 being killed is the heart of aloha.

11 The organ that's the state so commonly
12 prostitutes, to say nothing of the effect of rolling
13 Stryker tanks over the la'au or Hawaiian medicine herbs as
14 you parade the vehicles across it.

15 I took a course in la'au and I was taught
16 that every single little thing that comes up out of the
17 ground is medicine, you know? The grass, what you might
18 consider a weed is not a weed. It's something that has a
19 purpose and it can do something for your body or your well
20 being.

21 It could be something that you don't know.
22 Maybe could cure a terminal disease that one of your
23 children could end up having.

24 In speaking to one of your cultural
25 consultants tonight -- this was really revealing about

1 walking on the iwi at Mo'okapu -- and, yes, her comment
2 was, well, they're there. They're kind of settled in.
3 And so if you're just on top of them, well, that's, you
4 know, they're kind of solid in their, sort of, was kind of
5 the comment.

6 It really bothered me because this is
7 someone who is going to be one of your cultural
8 consultants on this project. That's kind of a strange
9 thought. I like the lady but I couldn't understand this.
10 What kind of thinking is this?

11 My parents both died in the last couple
12 years. I don't want somebody playing golf on their
13 bodies. Why should people be playing golf on Hawaiian
14 bodies? I don't get it.

15 And there are consequences. The
16 consequences of such high disrespect for anyone's
17 ancestors should be enough to scare you away from those
18 places.

19 Giving back Kaho'olawe is like trying to
20 get rid of more Hawaiians. That is what will happen when
21 the kanaka ma'oli try to get rid of the ordnances that are
22 still there.

23 Genocide is something my family knows quite
24 a bit about because they were all killed by the Nazi
25 monster. Every one. I'm first generation American.

1 I find my self wanting to warn Polynesians,
2 all of them everywhere, not just the Hawaiians, to stand
3 ku and not stop at anything to protect and defend their
4 people, their environment and their culture. (Applause)

5 You are all fortunate enough to have family. I don't.

6 You have to malama and protect them and the
7 future generations. And you military people have to clean
8 up your rooms and maybe we can still, if we're lucky
9 enough to still be here, we can all have some aloha for
10 dessert.

11 And hopefully if the water is still clean
12 and present and the 'aina is not totally destroyed, maybe
13 we all can have some guava, some rose apple and other
14 huapala, dessert. (Applause).

15 MR. CHANG: Chris Camarillo, Patrick
16 O'Brien.

17 MR. CHRISTOPHER CAMARILLO: I'll testify
18 again because that was my ride up here. Christopher
19 Keli'iwai Camarillo.

20 A few things. You guys said that you guys
21 are flexible, want to move forward and you guys have
22 extended the period of time for testimony. Well, I'd also
23 like to see a moratorium on your plans, things that are
24 going into effect, say, January even the planning stages
25 before that. You should still stop. If you guys are

1 going to extend this EIS structure you should stop the
2 plans you guys have to go ahead, and not just have this as
3 a way of doing shows.

4 The other thing is my dad taught me when I
5 was young that if you enter into a business agreement or
6 before you move forward on any type of a project there's
7 always a win/win situation. This can be a win/win
8 situation. Not with the infantry, though.

9 You guys have over 215 jobs available in
10 the military. You guys can train for something else down
11 here: medical. That will fit in very good with what UH is
12 doing. Communications. Perfect spot in the world to be a
13 hub for communications.

14 Virtual flight school, virtual tank
15 schools, things like that. Technology. Move your
16 advertising agency down here. You guys spend a lot of
17 money with them.

18 Other things you can give us, because this
19 is mitigation, you guys want to be able to give us
20 something and we're going to give you something.

21 Part of what we're giving you is our mana'o
22 that you guys are lacking. What you guys can do to give
23 us back, you guys are saying in your own statements you
24 guys are making a smaller more constructive force. So you
25 don't need the lands that you already decommissioned or

1 quote "decommissioned" such as Bellows that you guys use
2 as a recreational area.

3 You guys have Noue, your outpost in Waianae
4 that has like about 5 or 6 houses out on the beach that
5 you guys have cordoned off so that the natives can't go
6 there. Give back Noue. Noue is a place that you guys
7 took.

8 Not even sixty years ago you guys removed
9 the bones of one of the grandparents of our ali'i and
10 discarded them. Luckily somebody found them. That's
11 actually very much against what your guys' statement is
12 for how you guys treat bones.

13 Halekoa and Fort DeRussy. That has nothing
14 to do with your current plans to become a more condensed,
15 more structured military. So you guys don't need those
16 either. Give those back to us. Give those back to us
17 before January so that we see you guys are really true on
18 your desire to mitigate, make things easier.

19 That also makes it easier for me to come up
20 here and say nice things about you guys. (Applause) Lose
21 that commercial. Lose that commercial that you guys have
22 heard that a lot of problems with not only because of
23 mispronunciation but because it's about sacred places.

24 Lose the flags. Stop flying flags over our
25 graveyards. Stop flying flags over our sacred land.

1 We should have one day per page inside this
2 report. Name the base and the roads after our heroes, not
3 yours. You should each have a little sticker on you that
4 says "Hazardous to your health and mental welfare and
5 'aina," on each of your vehicles just like they have done
6 on each pack of cigarettes.

7 Air traffic was not addressed in your EIS
8 because you guys are not specifically dealing with air
9 stuff. However, I know your colonels and generals like to
10 fly in on helicopters and that you guys will be doing
11 joint training with other agencies within the military.

12 Okay. This what you guys have brought
13 here. Before the Japanese invaded or came over to
14 Hawai'i, they said that we will not come here if you guys
15 leave Pearl Harbor. Saddam Hussein said he would leave
16 Kuwait if you guys left Hawai'i.

17 So you have invited your war to our
18 doorstep.

19 For those of you that are out there,
20 November 9th and November 12 our Senators will be here so
21 let them know what you think. They'll be at Hilton
22 Hawaiian Village and at Iolani Palace on those two days.

23 The other thing is if you haven't noticed
24 the majority of consensus here is that we do not want the
25 Stryker Brigade here. Other consensus is we don't want

1 the military here. Like I said earlier, there is a way to
2 find a win/win situation. We can't seem to find that with
3 an infantry brigade but perhaps with a medical brigade,
4 communications brigade or something else.

5 Lastly, for every dollar that you spend
6 here you should put \$3 towards a trust fund for the things
7 that you're taking away from here.

8 You're taking away our land. Our land is
9 our trust, the things, the meat of what was left here for
10 the people to survive off of. So there should be \$3 for
11 every dollar that you spend on whether it's housing or
12 bombs or whatever. (Applause).

13 MR. CHANG: Patrick O'Brien.

14 MR. PATRICK O'BRIEN: My name's Patrick
15 O'Brien. I'm a retired Army officer. I live on the North
16 Shore. I have seven years of experience out of Schofield.

17 I'm up here, my purpose is to provide my
18 comments as to how to improve your Environmental Impact
19 Statement, having trained in the various areas that are
20 listed here.

21 I haven't read the Environmental Impact
22 Statement. I've only been able to look at your summary
23 handouts and your table on the executive summary. So my
24 comments will be brief. And you may, in fact, know more
25 details. I will just provide my 2 cents of experience.

1 I think on the "vehicles used" portion you
2 need to look closely at the number of vehicles that you're
3 saying the Strykers operate in East Range and Kahuku. 200
4 Stryker vehicles.

5 I first got here and we still had quarter
6 tons using. Now, that was a quarter ton vehicle Jeep.
7 Then we went to the Humvees, about 1 ton. Now we're going
8 to the Stryker 20-tons. You can see the progression.

9 We had 200 Jeeps up in the Kahukus. I
10 think 200 Strykers may be severely straining the terrain
11 in the area of the Kahukus and around the island.

12 Certainly, in any intelligent preparation
13 of battlefield you would have a lot of no-go areas to
14 maneuver a vehicle of such size. So, again, you need to
15 consider that.

16 You need to look at a worst case. It
17 rains. It rains a lot. We've had several severe storms,
18 flash flooding in this area, to include the vehicle
19 deaths, been here long enough to know Humvee deaths in the
20 Kahuku areas with soldiers involved.

21 Those with Humvees, I'm not sure what a
22 20-ton vehicles would do when you look at the stream
23 crossings and such with that.

24 I raise the comparison on the golf course,
25 even here at Turtle Bay, it rains hard enough the greens

1 keeper will ask the carts to stay on the path.

2 If it rains hard enough in the Kahuku area
3 you're going to increase the erosion significantly. You
4 can go up to the motor cross area and look at the
5 moonscape that's been created by motorcycles driving over
6 that terrain. Imagine the impact of a 20-ton vehicle
7 going over that same terrain in the rain month after
8 month, year after year.

9 The dangers that you can turn -- the impact
10 is not as significant as -- I don't know how many of you
11 have been to Fort Benning, but you have the possibility of
12 turning the island into a Fort Benning where the terrain
13 has been torn up.

14 On your chart "road improvements" I think
15 you need to look at the impact of violent traffic on that.
16 My experience, is the staging area. Where would be your
17 assembly area for the DRF-1, the quick reaction forces,
18 20-ton vehicles, how that's going to convoy to Hickam, fly
19 out? That would be the plan why we would want to be here.
20 I didn't see that talked about in the plan. If it is in
21 the EIS I didn't see that addressed.

22 The Humvees that convoy now can easily
23 blend in. But 20-ton vehicles have a harder time blending
24 into the traffic.

25 Along those lines, the road from Schofield

1 Barracks to East Range, how are the vehicles going to get
2 to East Range from Schofield? I see the tank trails,
3 range roads have been described, the various other areas.
4 But currently the Humvees kind of blend into the civilian
5 traffic.

6 Again, 20-ton vehicles, they come out of
7 Foot Avenue of Lyman Gate, are they going to cross Kunia
8 Road, cross Wheeler, cross Kam Highway East Range? I don't
9 know how that's going to be done. I don't see a tank
10 trail designed for that. That's going to be an impact.

11 Similarly, the tank trails, the
12 construction of those, the chart says it's going to be
13 gravel. I think you may want to consider biting the
14 bullet and actually hardening those roads. Otherwise
15 you're going to be in constant state of repair on the
16 gravel roads with the rain, especially the roads such as
17 Drum Road. Having driven that, you want to train at night
18 in the rain, that's when we train in the Army, you're
19 looking at the vehicle accidents and such and the constant
20 state of putting the engineers up there to repair it with
21 the 20-ton vehicle usage.

22 So I think you need to go back and look at
23 changing from making it a gravel road to actually making
24 it a hard road. I didn't see a specific map of where
25 you're going to plan to put the road to go from Schofield

1 to Dillingham, but I know that terrain if you're not on
2 the Snake Road itself it's fairly steep dropoff.

3 I think that would be a fairly significant
4 impact on the environment. That needs to be addressed.

5 In all those cases, I haven't had a vehicle yet that
6 doesn't break down. And I don't know what that haul
7 capability is on a 20-ton vehicle. If you're going to
8 pick it up, move it it's got to be something larger than
9 20 tons to carry that thing back, haul it back.

10 So you really need to consider that
11 capability unless you're going to go back onto the
12 civilian highways. You can use the Kam Highway.

13 Also, the crossing these tank trails to the
14 civilians roads, Snake Rad, Kam Highway, knowing when the
15 sugar cane haul vehicles or if Dole uses it they go back
16 and clean it.

17 I know myself, my own experience, I clean
18 the road after ourselves. That needs to be addressed how
19 that's going to be cleaned up when these 20-ton vehicles
20 bring mud across the civilian highways.

21 Also the vehicle wash area. You may want
22 to consider one for readiness through Hickam. I know
23 trying to get the vehicles on the aircraft they need to be
24 spotless. Also I saw one in Kahuku. The location wasn't
25 specified. But there's going to be a lot of runoff in

1 that area. The soil appears clay, doesn't percolate very
2 well. So where that's going to run off to?

3 Once they go back, they go back on a dirt
4 road. They're going to be dirty by the time they get back
5 to Schofield and have to be cleaned.

6 Finally, the last comment would be about
7 the unmanned area vehicles. I live up here fairly close
8 the X strip. Helicopter periodically overfly and shake my
9 house, rattle the roof and windows.

10 My concern about the unmanned aerial
11 vehicles what proximity are going to be the homes. And if
12 one of those -- we had a helicopter crash not too long ago
13 in X strip. Once those go out of control, if there's an
14 emergency, has a crash, there's no pilot to steer it to
15 somewhere safe, that's going to go, perhaps, into a home.
16 It's not that area where they're actually flying just
17 looked at the impact. That's my 5 minutes worth. Thank
18 you. (Applause, whistles)

19 MR. CHANG: Thank you, Mr. O'Brien. Thank
20 you all for your patience, perseverance. Mr. O'Brien was
21 the last scheduled speaker.

22 May I ask Colonel Anderson, do you wish to
23 make any closing comments?

24 COLONEL ANDERSON: I want to thank
25 everybody that is still here, but more importantly to

1 thank everybody, though they're not here, that
2 participated tonight and, in fact, everybody who was here,
3 personally thank everyone that came tonight.

4 All of the comments, written, oral will be
5 taken into consideration as we go forward in preparing our
6 Final Environmental Impact Statement.

7 Further, anybody that did not have the
8 opportunity, did not feel like they were comfortable with
9 giving oral testimony, we will still accept written
10 testimony, e-mail testimony, fax testimony, any way you
11 can get it to us. We will do that through the entire
12 public comment period which we mentioned was extended
13 through the third of January.

14 Again, thank you all for you attending
15 tonight and thank you very much for the respect and
16 dignity offered to each and every person that presented
17 testimony here tonight.

18 Again, thank you very much. We will do
19 this again in a couple hours over on the Big Island.

20 Thank you. (Applause)

21 MS. AMARAL: We opened the meeting with a
22 pule so I think it might be fitting to close the meeting
23 with a pule. For those of you that know Ho'onani you can
24 rise.

25 (Singing) Ho'onani i ka Makua mau, Ke Keiki

1 me ka Uhane no, Ke Akua mau Ho'omaikaipu, Ko kela ao, ko

2 kela ao. Amene.

3 Go in peace. Thank you.

1 TUESDAY, NOVEMBER 4, 2003; 6:06 P.M.

2 --o0o--

3 MR. JESS SNOW: My question is what kind of
4 impact it will have on the existing Waiale'e Motorcycle
5 Park.

6 Will there be any changes?

7 That's my question.

8 Will they continue to -- as it is now, there's
9 certain weekends where they will come in and train, and
10 the motorcycle riders won't be able to -- they'll close
11 the park for the weekend.

12 And my concern is: Are they going to centralize
13 it in their new area that they're building or will it
14 impact us differently at the motorcycle park?

15 That's one of my questions.

16 And my second question is: Are they going to
17 have military police, like they did in the old days,
18 guarding it?

19 And what about hikers?

20 I live in the area.

21 So when I come up and hike in the area with my
22 family, kids, and dogs, are we going to be trespassing?

23 Is somebody asking about the water sources, all
24 the natural Artesian springs that are up there?

25 I'm concerned about the water sources that would

1 be impacted, Artesian springs that come down into the
2 coastal areas, of course.

3 ***

4 6:50 P.M.

5 --o0o--

6 MS. DIANE ANDERSON: I'm very happy that the
7 comment period has been extended until January 3rd. That
8 was my very first question. I had -- had a chance to
9 read the entire Executive Summary. I have not had a
10 chance to read the -- all of the three volumes of the
11 DEIS; so I will hope to do that during the next month or
12 month and a half, and that I intend to try to put into
13 questions a letter and put it into writing.

14 My place of residence is on the North Shore,
15 between Haleiwa and Waimea, and it's on the -- I live on
16 the shore. Behind us is the proposed Kawaihoa Training
17 Facility, that includes Drum Road, going from Schofield
18 to Kahuku. The significant impacts of the noise has
19 already been addressed, about the unmanned vehicles,
20 unmanned -- UAV. Those are Unmanned Aerial Vehicles, I
21 think it is. My big concern was where were they going to
22 be flying, and now I have that answer. It's over areas
23 that aren't residential areas.

24 I wanted to know about the antennas in the
25 Kahuku area and the Dillingham area, how tall they were

1 going to be and whether or not that they would be

2 significantly producing electromagnetic radiation.

3 I was concerned about the road, how these

4 vehicles were going to go from Schofield Barracks to

5 Helemanô, how many times would they have to cross the

6 highways, and were they going to be using the same

7 existing roads that we're all using now.

8 There is a road being proposed to be built from

9 Schofield Barracks to Dillingham. I wanted to know if

10 the road was visible from Kaukonahua Road, whether they

11 were going to be fencing the area.

12 And the proposed telecommunication lines, I

13 wanted to know if they were above ground, would they be

14 visible.

15 The increase in population that is mentioned in

16 the Executive Summary included about 2,365 people; that's

17 including the entire family. They said that they expect

18 a significant impact in the schools and that the

19 Department of Defense would be covering some of the cost.

20 I want to make sure that the Department of Defense

21 understands that Hawaii already has a problem with

22 financing the educational facilities that are -- already

23 exist.

24 In the -- in the proposal that calls for no

25 action, they talked about the other projects could be

1 constructed on a case-by-case basis; and if that's the
2 case, then Hawaii wouldn't be losing out per se if they
3 didn't endorse this proposed action.

4 The Legacy Force, I assume, is what we have now;
5 and under the no-action alternative, the Army would
6 continue to fund those programs, so things would remain
7 pretty much as they are, and they would find another
8 home, I presume, for the Stryker Brigade.

9 But if this is an Interim Force and the goal is
10 towards an Objective Force, how much more in the way of
11 cumulative impacts and in the acquisition of land or
12 expansion of training areas can Hawaii expect in the
13 future?

14 Because already we're having big meetings just
15 in terms of the Interim, and that isn't even the goal.
16 The Objective Force is the goal.

17 The air quality issues of dust being a
18 significant impact, the Executive Summary states that
19 already the -- it will exceed the federal level of --
20 24-hour federal level. So in --

21 My question is: Are we trading off our health
22 for safety?

23 I know that we are in need of living in a safe
24 environment; however, we also expect to live in a clean
25 environment. And I'm not really sure how to understand

1 365 tons of fugitive dust and what that actually means

2 visibly and respiratory-wise.

3 They talked about the water.

4 And there's potential, of course, for wildfires

5 and chemical spills. I don't really know what "sediment

6 loading" is. But one of the concerns that I had was

7 about the wildfires and how they would mitigate the

8 fugitive dust.

9 What kind of chemicals would they use to spray

10 to mitigate fugitive dust?

11 The cumulative impacts, the conversion of ag

12 lands, it says that it's a trade-off, trading lands for

13 ag land.

14 I'm very happy that the Army is considering

15 putting together a Citizens Advisory Board, and I would

16 be interested to stay connected and possibly be a

17 participant on that board.

18 The Army is -- says it is also considering -- in

19 the -- one of the tables, it said they're considering

20 putting and implementing an environmental management

21 system. I would hope that that would be a mandatory

22 management system, not "considering". I think that it's

23 a good idea to go ahead and fund that portion, because

24 Hawaii is, after all, one of the most beautiful places in

25 the world, and its scenic, environmental qualities are

1 our economic base.

2 I think that purchasing buffer zones to protect
3 the residents is a tremendously good idea in working with
4 the non-profits.

5 And I thank you very much for offering this
6 opportunity to do this off camera.

7 I'd also like to be able to say that the first
8 paragraph of the Executive Summary stated that the
9 reasons for this Stryker Brigade is to have an Army
10 that's ready for intense combat, for peacekeeping, and
11 for humanitarian issues; however, I don't see any
12 discussion about humanitarian issues or peacekeeping
13 issues being raised; and that's really sad, because I
14 think that's where we really need to go. After all, they
15 say that if you want peace in the world, it begins at
16 home; and at home, the families have understood now it's
17 not a good idea to be violent towards your children, so
18 therefore I think that it's not a good idea to be violent
19 in any part of the world.

20 Thank you very much.

21 ***

22 (More proceedings were had on the following page.)

23 / / /

24 / / /

25 / / /

1 9:49 P.M.

2 --o0o--

3 MS. MARIE KEAWEMAUHILI: I don't want this to
4 happen, and the reason why is because I live on a beach
5 in Mokuleia. And I go to Ami Beach, and the Army showed
6 me papers that I have to leave the beach, the military.
7 And they also showed me papers that if there is no war,
8 the lands was supposed to be turned back to the Kingdom
9 of Hawaii. The Kingdom of Hawaii still do exist. Our
10 people is one, even though we're not together. And I
11 think we can run our country just as better as the
12 American can run our country now.

13 All I want them to do is to please not destroy
14 anymore and to just don't bring those big -- because they
15 will do a lot of disaster to our country. And I just
16 hope they have consideration. Because they say they're
17 supposed to be -- America is supposed to be the land of
18 the free and they supposed to be for the people and they
19 supposed to listen to what the people say, because the
20 people is the ones that supposed to agree on everything,
21 not just the people that they chose to be leaders; and
22 they're not listening to the people. So I'd rather them
23 listen to the people and just help them.

24 / / /

25 / / /

1 And please stay out of our country and clean it
2 up when they leave. I mean, that's the least what
3 America can do.

4 (End of breakout session.)

1 P R O C E E D I N G S

2 MS. LEE: Welcome. Have a seat, please. My name is
3 Miki Lee. I will be one of your facilitators tonight, and
4 in a few minutes, I'll tell you what that means, but before
5 we get started into the formal meeting, I'd like to ask
6 Papa Akau, if he will start us off with an opening pule.

7 MR. WILLIAM AKAU: Let us pray. Father in heaven, we
8 bow our heads at this time, and we open up this meeting
9 this evening we are grateful, Father, for being here and we
10 pray for the Spirit to bless us and inspire us, especially
11 those that bear the responsibility in which they have in
12 being here to make presentation of the things that we will
13 take part here on this Island.

14 We are grateful, Father, for being here this evening,
15 and we pray for Thy Spirit to guide and direct us that we
16 may feel of Thy love and understanding of who we are.
17 We're here because we are American citizens and we
18 Hawaiians and others, and we pray that we always may be
19 mindful that we may have that love within our hearts to
20 work together and to better things here in the islands.

21 Bless those who are responsible. Bless those who
22 will conduct this meeting and those who will discuss
23 various points and what they feel is right. We pray for
24 Thy Spirit and for Thy guidance to be with us throughout
25 this meeting, and we do these things humbly in the name of

1 Thy beloved son, Jesus Christ. Amen.

2 MS. LEE: Next I'd like to call Colonel David
3 Anderson, the Garrison Commander forward, for some opening
4 remarks.

5 COLONEL ANDERSON: Aloha, and good evening. Thank
6 you, Miki, for starting us off tonight. Thank you very
7 much for that pule.

8 I'm Colonel Dave Anderson, the Garrison Commander for
9 the U.S. Army Hawaii. I'm responsible for all the Army
10 installations across the great State of Hawaii. On behalf
11 of General Eric Olson, the Commanding General of the 25th
12 Infantry Division, U.S. Army Hawaii, I'd like to welcome
13 you to tonight's community meeting on a draft Environmental
14 Impact Statement for the transformation of the 2nd Brigade,
15 the 25th Infantry Division to a Stryker Brigade Combat
16 Team.

17 Tonight we're here to listen to your concerns and
18 gather your comments. We're not here to present anything.
19 We can answer questions back at the subject matter experts,
20 but we're really here as part of this process to get your
21 comments so we can take those comments and make our
22 Environmental Impact Statement a much better document.

23 We started off with a draft Environmental Impact
24 Statement almost a year ago, and we went through the
25 scoping meeting process, gathered public comment and

1 incorporated that into what is now the draft Environmental
2 Impact Statement.

3 This document is so much better now than it was when
4 we started, and that is all because of the public
5 participation and the public input we've had in this. This
6 is a continuation of that process, and so your
7 participation and your input on the content of this
8 document will help us to make the document that much better
9 so that when the final Environmental Impact Statement is
10 published, that the decision makers can use that document
11 to make the right decision as to whether or not to field
12 the Stryker Brigade in Hawaii. So it is important that we
13 go through this process and that we have participation and
14 everybody's afforded the opportunity to present their
15 comments.

16 Again, your role is to provide additional input on
17 the environmental, cultural, and any other concerns you
18 believe should be addressed and analyzed in our final
19 Environmental Impact Statement. The Environmental Impact
20 Statement is the most comprehensive document that can be
21 prepared under the National Environmental Policy Act.

22 I know that everyone's anxious to get started and to
23 present their comments to us. Again, we can do comments
24 either verbally here at this podium or we can do them
25 through our court recorders or we can take them in writing

1 or we can do them via email.

2 I'll turn the mic back to Miki. Thank you all very,
3 very much for being here tonight, and we'll go until we've
4 heard everybody that wants to talk. So, thank you very
5 much.

6 MS. LEE: I would also like to introduce two other
7 people who are sitting at the head table here, Lieutenant
8 Colonel Fred Clarke, the PTA Commander, and he's joined by
9 Mr. Ron Borne who is the transformation manager.

10 (Applause)

11 MS. LEE: So let me talk briefly about the role of
12 the facilitator. Again, my name is Miki Lee. I am from
13 Oahu, although I have lived on the Big Island for about ten
14 years of my life growing up. My colleague over there
15 standing up is Annelle Amaral. Together this evening we
16 will just facilitate the meeting, and all that means is
17 we're going to try and stay the course.

18 We'd like to create an environment where everyone can
19 be heard. I think tonight we may hear an array of views
20 and opinions, and our job is just to make sure that
21 everyone feels like they can speak comfortably here.

22 Part of the banishment of the meeting process is that
23 we're timekeepers. If we seem like we're a little
24 fatigued, we'll call some breaks. We are asking folks to
25 keep their testimony or comments to about five minutes, and

1 what will happen is you'll see either Annelle or myself
2 sneak in from the side and put this little card on the
3 podium when it's about four minutes just to let you know
4 where you are with the time.

5 I'll repeat that the purpose of the meeting
6 tonight -- or actually, this is a meeting. This is the
7 fifth of sixth meetings that we've had on Oahu and two here
8 on the Big Island is to receive your comments, to hear all
9 that you have to say as it relates to the draft
10 Environmental Impact Statement.

11 In some of the other meetings, we've heard some other
12 issues about the military and more, and we're glad to hear
13 that, but we're really here to talk about the draft EIS.

14 We've mentioned a few times that there are many ways
15 that you can give your comment, and I'm going to repeat
16 them and I'll do it again, and I hope I won't bore you, but
17 I'm trying to get across to you that you have many, many
18 opportunities to think about and give comment.

19 We do have a court stenographer here right now who is
20 taking a verbatim record of what I'm saying and what you
21 will say when you come up here. We have another one off to
22 the side. If anyone would like to make oral comment but
23 doesn't want to come up to the mic, please just step over
24 there and feel free to make your comment. Again, she will
25 do it verbatim.

1 There were comment cards up front. You can leave
2 them with us. You can submit them after the fact. You can
3 fax them. You can email things. You can do it any way you
4 like up until, I think, January 3rd. That is the new
5 extended comment period.

6 I would like to introduce Noelani who is here as our
7 Hawaiian language interpreter, and she'll talk to you about
8 the accommodations we'll make for Hawaiian-speaking
9 participants.

10 MS. NOELANI ARISTA: Aloha mai kakou. He wahi kakou
11 po'e 'olelo makuahine. A i na loa'a makou. I ka 'olelo ma
12 ka 'olelo Hawaii o. Hiki ia 'oe ke 'olelo ke unuhi nau hio.
13 Ai 'ole ke 'olelo 'oe. Pi'ike waiho i kou 'olelo. A unuhi
14 ia mahipe mai i ka palapala. Ai 'ole i na mamake 'oe ko
15 hiki ia ma kou ke hui pu mamua, ke 'olelo 'oe. Ai 'ole i
16 na mamake 'oe ia'u kokua aku ia 'oe. Makemake. Oia wale
17 no. Aloha.

18 MS. LEE: We've just brought in some new chairs, and
19 we also have quite a few chairs up in the front here if
20 anyone wants to take a seat, there is plenty of room,
21 you've just got to come towards the front of the room.

22 Before we get started, I would like to go over a few
23 meeting protocols, some guidelines that we have to help us
24 as facilitators run a constructive meeting. The first one
25 I already mentioned, we're going to ask that you try and

1 keep your comments to five minutes if you can, and again,
2 we will remind you of the time.

3 The process for coming up here is at the front desk.
4 They should have asked you when you signed in if you wanted
5 to make comment and there's a little piece of paper that
6 has a number in it. That's the number in sequence in which
7 we're calling people up. If you haven't done it, you still
8 can. There's plenty of time to do that. If you signed up
9 and you change your mind, that's fine, too. If we call
10 your name, just let us know, you know, I pass. So we will
11 be calling people up in the order that they signed up.

12 We would ask that you show great patience and respect
13 to everyone who comes up, who has the strength and
14 fortitude to share with you their comments and feelings, so
15 that everyone can be heard without interruptions.

16 We have been asked by the hotel to acknowledge that
17 there are several special events going on tonight in the
18 hotel. There's a luau, there are weddings, there are
19 conventions, and so that we not do anything to disrupt the
20 activity outside of this room.

21 And finally, I ask that we wrestle with the issues
22 tonight and not with people. We're hear to talk about an
23 issue and not to point fingers and not take it to a
24 personal level. So with that, I would like to start the
25 meeting. And our first speaker, give me a moment, it is a

1 very long and respectful name and I hope I treat it with
2 the respect that it is, Hannah Wahinemaikai'okaahumanu
3 Keliulanani'ole'okalama (Kane) Reeves is our first speaker.

4 Let me just let you know who follows so you can be
5 ready. That would be David Bigelow, Constance Fay. Our
6 first speaker.

7 Another thing I'm going to do as a facilitator, and I
8 don't want you to think I'm hovering, but as you come up,
9 I'm going to adjust the mic so that our transcribers can
10 get the full benefit of hearing you.

11 MR. ABEL SIMEONA: Auntie asked me to come up,
12 mahalo, Kapuna. Mahalo, ohana. Mahalo everybody that stay
13 here. We come before you for kokua. To say our po'o.
14 Mauna Kea. Mauna Loa, the 'olelo of being in Hawaii, to
15 talk about this place, about this land, and about this
16 place that we call Hawaii nei. Aloha.

17 MS. HANNAH REEVES: Aloha. I'm very happy to be here
18 and thank you, Mr. Clarke. It is an honor and privilege to
19 meet you and all the people who are here. My name is
20 Hannah Wahinemaikai'okaahumanu Keliulanani'ole'okalama
21 (Kane) Reeves. I born and raised in Hawaii. For
22 generation are my mom and dad.

23 It is a privilege and honor for me to be here, but
24 there's a land, Pohakuloa, the mountain belong to my
25 ancestors before white man came. I have the papers here to

1 show proof that these lands is for our people before white
2 man came. And it is an honor and privilege for me to be
3 here because I wanted to let Mr. Clarke know that there is
4 500 -- they claim there's 500 heiau that is on that land.
5 It's not, there's thousand. The road that they making they
6 saying that there is no iwi, I challenge them and I say
7 thousands on the highway.

8 It is very important that the military knows that
9 we're not from anywhere. We've been here from generation,
10 my mom and dad, and I can prove it to you. I want you to
11 know that these mountains are very sacred Mauna Kea, and I
12 claim it right, the north, the south, the east, the west.
13 I claim Mauna Loa, the north, the south, the east, the
14 west, and I claim Pohakuloa because I am a direct
15 descendant claiming today, that there are thousands of us
16 living today. I want the military to know that there are
17 many things that happened that you people don't know.

18 It's been 160 years and over that the United States
19 have stolen from the Hawaiian people, and I'll challenge
20 them, Congress, the Department of Interior, and everybody
21 that who is here, that is illegal, invade the Hawaiian
22 people. I stand before you as one person and all my
23 ancestors and all my family living today that my job is to
24 protect old Hawaii. I protect all the heiaus, all the
25 trails, all the pu'u, all the mountains, the ku'i kinau,

1 all the trail, all the iwi, and the cave, the water, the
2 north, from the mauka to the makai. From the 'apu'a to the
3 mountain to the sea and go over 300 miles outside and
4 around the island, every island.

5 I am proud to stand before you that I am not ashamed.
6 I'm 100 percent Hawaiian and I'll be standing here until I
7 die. I want you people to know that I am for our people.
8 I speak for them, for my family and every Hawaiian. You're
9 afraid to -- you're afraid that I'm going to stop your job.
10 You know what, I don't stop your job. I just make sure
11 that nobody destroy -- remove or destroy and run over.
12 I'll make sure that you be paying fine, and I want to talk
13 all of the developers. I'm serious about this.

14 You cannot destroy or remove or run over like
15 Hokulea. I am one of the Kapunas that came against
16 Hokulea, and I want you to know that I thank you very much.
17 There's a lot of Hawaiians, they don't realize, they worry
18 about their job. It's not their job. It's the ohana they
19 value on the ground. What you be looking for them.

20 And to you people, I'm speaking about the people that
21 are the other nationalities, they support us. They support
22 to protect old Hawaii. There are thousands of people that
23 come from the four corners of the earth. They come here to
24 see Hawaii. They don't come here to see the building or
25 the highway.

1 I would love to see progression under one condition,
2 no destroying, no removing, no run over. Mr. Clarke, I'm
3 holding you against that. I want you to know that there is
4 something that is so sacred about the mountain, Mauna Kea,
5 and I know that in my heart there is time to open up, open
6 up and say you cannot go there. Cannot. You have to stop.

7 I am not for the military to come here. I got to say
8 that because they're going to destroy our Island. They
9 been destroying our Island, Kaho'olawe, Honolulu, and they
10 will continue to destroy here. I want you to know, Clarke,
11 this is very important, you cannot do that to our land.

12 We're one of the most sacred islands in the Pacific,
13 and why you want to do that? I don't know. Go someplace
14 else. Go to the United States and bomb all you like or
15 practice all you like. Hawaii is the most beautiful place
16 to live in. We invite people to come here because we have
17 old Hawaii. We got all nationalities in Hawaii. Why we
18 have to have people come?

19 They say we get highway, they get a job. Well, you
20 know what, that don't stop destroying. I want you folks to
21 know that I love you, and God bless you, Mr. Clarke.

22 (Applause)

23 MS. LEE: Are you Mr. Bigelow?

24 MR. DAVID BIGELOW: Good evening, Colonel Anderson
25 and Clarke and everyone else. My name is David Bigelow and

1 I'm here to represent the Waiki'i Ranch Homeowners
2 Association. We were here approximately one year ago
3 during the scoping process. We made our concerns known
4 about the -- what is now called the WPAA, which is the West
5 Pohakuloa acquisition area. It's a 23,000-acre expansion
6 for Stryker training. It covers the area south of Saddle
7 Road, pretty much from the Saddle Road intersection all the
8 way up to Pohakuloa. And our comments here this evening
9 only address that area and no other portion of the
10 transformation.

11 We had -- our community, at the scoping process, we
12 had a number of concerns that we expressed then, and those
13 being health and safety of our community, noise, the dust
14 generated by the military maneuvers, and also the increased
15 threat of wildfires, and some social concerns, also.

16 So, more specifically to the six subjects in the
17 draft EIS that apply to us, I'm just going to try to
18 quickly go through them and hit them as briefly as I can.

19 First of those is land use, and the proposed WPAA
20 land is presently owned by Parker Ranch and is designated
21 as agricultural by the State Land Use Board. The draft
22 EIS, Section 827 states and this is a quote, The proposed
23 training land, uses of agricultural grazing land, yet the
24 WPAA is not consistent with the land use set forth in the
25 County of Hawaii general plan.

1 I'd like to add to that in light of Judge Ronald
2 Ibarra's recent decision regarding non-conforming use of
3 agricultural land, we believe that the proposed action
4 under the subject of inversion of agricultural land to
5 training land should be changed to significant.

6 Going to geology and soils, the discussion in Chapter
7 8.9 is a thorough treatment of the soils and geology of the
8 WPAA, and we agree with the conclusion under the subject of
9 soil loss that the impact is significant, so we take no
10 issue with that.

11 The WPAA, area surrounding our borders presently has
12 almost no human travel. The risk of fire is very low.
13 However, the addition of heavy vehicles and warfare
14 stimulation with explosive devices raises the risk of fire
15 exponentially. The potential for severe damage to our
16 community is very high, and for these reasons, we believe
17 under the subject of soil erosion and loss and wild/land
18 fires, the impact should be changed to significant.

19 Air quality. The use of the WPAA land for off-road
20 exercises and the high increased risk of wildfires and
21 resulting dust storms will cause a significant degradation
22 of air quality. Flying dust will be a hazard to the health
23 of our Waiki'i Ranch residents and will also cause property
24 damage. We agree with the conclusion that the proposed
25 action under the subjects, future dust from the military

1 vehicle use and wind erosion from areas disturbed by
2 military vehicle use is significant.

3 In addition, we believe another impact issue should
4 be added, and that being wind erosion from areas burned by
5 wildfires. The impact of this would also be significant.

6 The next subject. I'm running out of time here, I'm
7 sorry. I'll go fast. The human health and safety hazards.
8 We believe there are real human health and safety hazards
9 to the residents of Waiki'i Ranch if the WPAA plan is
10 implemented. The chapters on air quality that are in the
11 EIS agree with this, and they state that the dust generated
12 by vehicles and the subsequent wind erosion has the
13 potential to create significant health effects.

14 The same chapters conclude that dust generation has a
15 significant impact and is not amicable. This should be
16 included in the human health and safety chapters, and it's
17 not. It's lacking. So what I'm saying is in one chapter
18 it says it's a health hazard, and in the health hazard
19 section it doesn't mention it.

20 The increased threat of wildfires is a direct threat
21 to human health and safety. The fire itself and length of
22 a dust storm after the fire is addressed in the EIS as
23 amicable to less than significant. We believe that an
24 impact issue titled dust particle inhalation should be
25 added and that the impact should be significant. In

1 addition, too, the wildfires impact should be upgraded to
2 significant.

3 Okay. The next one would be noise. And the increase
4 of noise levels due to small arms fire and heavy weapon
5 simulators is discussed in Chapters 4.6 and 8.6 in the
6 draft EIS. One of those chapters draws the conclusion that
7 it's a significant problem and the other draws a conclusion
8 that it's not significant, so there is a conflict there and
9 the final -- in the table it says it's not significant, so
10 there is a problem with this as far as being inconsistent.

11 As far as these Waiki'i Ranch specifically, those
12 discussions maintain that the noise levels from small arms
13 fire and weapon simulators can be mitigated to a reasonable
14 level by maintaining a distance of 500 feet to be 1,000
15 feet at night from the borders of Waiki'i Ranch. We do not
16 agree with this conclusion. We believe that the amount of
17 noise that will be generated by training exercises will be
18 significant and the impact on Waiki'i Ranch will be
19 negative. For this reason we believe that the subject of
20 noise from ordnance use should be changed to significant in
21 all tables.

22 And the last thing I have is socioeconomic factors.
23 Those chapters completely ignore the socioeconomic impact
24 on the residents of Waiki'i Ranch. Waiki'i Ranch is
25 surrounded by agriculturally zoned land and was developed

1 and sold as a place very peaceful and tranquilized stop,
2 and the plan non-conforming use of the surrounding
3 agricultural land involves health hazards, noise, and a
4 highly increased threat of wildfires. This is certainly a
5 significant social issue.

6 In addition, the Army's plan to acquisition the
7 surrounding agricultural land has already affected property
8 values and will certainly have a greater effect if the plan
9 is implemented.

10 For these reasons we believe that the following
11 impact subject should be added to this chapter, and these
12 are loss of enjoyment of property and loss of property
13 value. And we believe both of these impacts should be
14 labeled as significant.

15 So I'd like to thank you for your patience.

16 (Applause)

17 MS. LEE: Before we bring our next speaker up, I was
18 asked to let you know what Noelani offered in terms of
19 translation in the Hawaiian language, and you'll correct me
20 if I'm wrong, Noelani, but I believe what she said is it's
21 up to the speaker. She is here to stand beside you if you
22 wish to give your testimony in the Hawaiian language, and
23 she will translate along with you or after you. She can
24 also wait until you're done. You can deliver your comments
25 and she'll work with our transcriptionist after the fact.

1 So, all she asks is that you touch base with her beforehand
2 and let her know what your pleasure is for translation
3 services. Thank you.

4 All right. Our next speaker is Constance Fay who
5 will be followed by Robert Miguel and C. Kaponono.

6 MS. CONSTANCE FAY: Good evening. I'm Connie Fay. I
7 live in Ahualoa, just around on the other shoulder of Mauna
8 Kea from Pohakuloa. I've lived there off and on since 1974
9 on a parcel of land that has trees and plants from the
10 music lowland Hawaiian forest. My post-retirement hobby is
11 removing wiwi and planting Hawaiian plants. I'm a retired
12 teacher of young children.

13 I have some questions about the EIS. I'm concerned
14 about the health impacts of the activities on the expanded
15 base. When the wind blows from Kona, which it has for the
16 last three weeks, what will be in the particulate matter
17 from the fires and dust that will blow around to our side
18 of the mountain? Will there be chemicals? Will there be
19 nuclear contaminants? Who will test the air? How often?
20 How quickly will we be notified that there are contaminants
21 in the air? This expansion should not take place until all
22 these questions are satisfactorily answered.

23 I have asthma, as do many people in my area. I can
24 tell when it's voggy, even before I open my eyes in the
25 morning because I wake up wheezing. Will there be an

1 independent EPA control unit monitoring contaminants with
2 the authority to control environmental substance abuse?

3 I have a similar concern about our food. Many people
4 in my community eat local. We get produce from our friends
5 and neighbors and from our local farmers markets. We talk
6 about how we grow our food. How will we know that it's
7 getting into our food from airborne contaminants from the
8 base?

9 The report states that there will be increase in the
10 amount of ammunition fired. Will there be depleted uranium
11 in the shell casings? What about larger artillery? Isn't
12 the Stryker basically a small-like tank? What ammunition
13 will it be firing?

14 Because I haven't had access to the whole report, I
15 haven't been able to do the kind of detailed analysis the
16 previous speaker gave. I still think these kind of common
17 day-to-day concerns need to be addressed and really, it
18 would be good if there were some day-to-day language,
19 because I feel like the language that the report is written
20 in, because it's so formal and because it's addressing
21 really specific, very detailed and technical issues, it
22 seems to me it's very easy to hide the kind of day-to-day
23 impacts that the base will have in this really technical
24 presentation and language.

25 So I'd like to have the report or parts of the report

1 that impact people translated into real English and also
2 into Hawaiian. I think that's respectful for those of us
3 who don't have the kind of specialized knowledge that seems
4 to be required when you're talking about these things, but
5 I'm talking about how this impacts me on a day-to-day
6 basis; my health, my children, my grandchildren.

7 I plan to write expanded comments, but I'm really
8 concerned that the funding for this project, as far as I
9 can tell, is part of deficit spending, and that's going to
10 impact the future for my daughter and my nieces and their
11 children. I have an alternate vision of the future use of
12 the Parker Ranch land. I don't have time now to share all
13 of it with you, but it does include making safe
14 environments for plants like these.

15 This is a native Hawaiian Lobelia. It's found in the
16 Kohala mountains. You probably won't see it in your
17 day-to-day wanderings, but if you come over to Ahualoa,
18 you'll see it in the forest that I'm trying to restore or
19 replant with some Hawaiian plants. Thank you.

20 (Applause)

21 MS. LEE: The next speaker is Mr. Robert Miguel who
22 will be followed by C. Kapono, who will be followed by
23 Leslie Agorastos.

24 MR. ROBERT MIGUEL: Good evening. I'd like to thank
25 you in advance for giving me an opportunity to speak and

1 share some thoughts with you this evening. My name is
2 Robert Miguel and I was born and raised here on the Big
3 Island, and like many of you, I have some very pleasant and
4 very special memories, particularly serving from 1952 to
5 1970. In fact, those memories are very special, but
6 sometimes I wish I can relive them in the year 2003.
7 Fortunately or unfortunately, that can't be the case
8 because life is ever changing. It's not static.

9 Having said that, I'm hear to speak and support the
10 U.S. Army's desire to move the Stryker Brigade to
11 Pohakuloa. It is imperative that as citizens we must
12 provide the operational elements of our defense department
13 every means and opportunity to train its troops and give
14 our troops the best possible means to meet the Stryker
15 Brigade's purpose.

16 The sons and daughters and husbands and wives
17 comprise the personnel of the Stryker Brigade must be able
18 to execute extremely dangerous missions in environments not
19 conducive to survivability. It is unquestionable that any
20 training and tactics, strategies and advanced technology
21 facilitates, the effectiveness and efficiency of the
22 Brigade; that such training also contributes to enhancing,
23 even just a little, the survivability of family members who
24 comprise the personnel of the Brigade is more than adequate
25 incentive for citizens to provide an unencumbered area for

1 operations.

2 The U.S. Army has proven to be a good neighbor in the
3 State of Hawaii. While tears garnish the headlines, the
4 economic impact of military fiscal activity is not
5 miniscule. Historically, it has always held steady,
6 thereby, giving individual wage earners an opportunity to
7 provide decent economic stability for their families. The
8 economic impact provided by the U.S. Army's presence here
9 on the Big Island would certainly be much greater than that
10 provided by the present state of any industry and any
11 business sector here.

12 Thank you very much.

13 (Applause)

14 MS. LEE: If you planned ahead and actually have
15 things typed up, we would love for you to leave a copy
16 behind if you're able to, so you can leave it at the front
17 desk or you can hand it to me. C. Kaponono.

18 MR. C. KAPONO: Good evening, Colonel Anderson,
19 Colonel Clarke, and Mr. Borne. Aloha Kakou and hanepui ho
20 nu ko kiawe.

21 My background is in pharmaceutical research. The
22 woman who came up and said that she wanted the EIS
23 translated in more simple language, I would encourage you
24 that you need to exhaust every detail that's inadequate and
25 to make sure, to make certain, without question, that

1 everything is understood. And to short change yourself in
2 some simple type of language would be an opportunity to
3 bury and to hide the most important conditions.

4 I'd like to address two issues of the EIS if I might.
5 First is a socioeconomic and environmental issue. DOD
6 currently spends \$1.3 billion in the State of Hawaii.
7 \$4 million -- \$4 million are spent here on the Big Island.
8 4 million. Of that 4 million, the United States Army
9 contributes about 95 percent of that. So it's only the
10 Army that's making an economic contribution to the Big
11 Island.

12 The Army is part of the executive division of the
13 United States. It's not an institution to itself. I'm not
14 here to defend the Army. They can do that for themselves,
15 but as a citizen, I'm aware that every federal agency that
16 supports the contents of this EIS is available to us as
17 citizens, which includes the EPA, the CDC, to answer any
18 questions that we might have to the integrity of our
19 natural resources.

20 I am a native Hawaiian by the United States
21 definition. My genealogy is this, every man in my family,
22 all their iwi are in this aina. I'm not foreign to this
23 place. So those of you that are, I welcome you, but I
24 encourage every Hawaiian to participate proactively in this
25 opportunity.

1 Secondly, I'd like to address the mitigation schedule
2 of those conditions that are set forth in the executive
3 summary and ask the management team to consider including a
4 native Hawaiian group to help resolve some of the
5 conditions that are being addressed in the mitigation
6 schedule. Oftentimes the state and county has been asked
7 to address certain issues that the United States Army and
8 Hawaii will not, and, you know, that's a toss up whether
9 the County of Hawaii is the best partner to be actively
10 engaged in some of these issues, but I think that those of
11 us who are concerned, who are stewards of the land, would
12 like to make a proactive contribution to that possible
13 outcome.

14 But more succinctly, on the Hilo side, we don't have
15 all these hotels. This hotel that we're sitting in is
16 foreign owned. The amount of money that you will spend
17 here, will leave Hawaii. The amount of money the military
18 spends here, stays here. It currently employs over 25,000
19 people. We don't have jobs in Hilo, and if you drive from
20 Hilo to Waikoloa, along the Hamakua coast, you will see
21 these flowers placed along the highway. Those were Hilo
22 residents who died on the highway coming to work over here
23 where you have the jobs.

24 So, for the living sacred bones of the living human
25 Hawaiians who are looking for an increase in quality of

1 life, we encourage the economic activity that the United
2 States would bring. I want you to think about this. We
3 don't have any industry here. We don't have a Boeing. We
4 don't have TRW. We don't have General Electric. We don't
5 have anything. The only thing we have and we've had is the
6 military, so like it or not. I think the same during the
7 '60s that I thought was pointed at a U.S. Army veteran of
8 Vietnam, either like it or leave it.

9 And I can say this: The military's strategy has to
10 be quality controlled and tested. We owe this to those
11 kids who are over there defending you right now. And I
12 wouldn't want to have to explain to their father or their
13 mother that we were concerned about the dust or the noise
14 and that's why the equipment didn't work that we sent your
15 kids into harm's way.

16 So, you know, get real with the deal and think about
17 it, and especially those of you who are parents who have
18 children who are overseas right now, just think about that.
19 And as a Vietnam veteran, you know, we thought about you
20 guys, and I tell you, it would have really pissed us off if
21 some of you guys got upset about the dust or the noise.

22 So, that's all I have to say. If I said anything to
23 offend any of you, talk to my attorney. Aloha.

24 (Applause)

25 MS. LEE: I feel the need to remind all of us in the

1 room that we are here to hear everyone's comments without
2 interruption. If you could please stop yourself while
3 someone is speaking, I'm sure that they will do the same
4 for you.

5 Our next speaker is Leslie followed by Robert Kozuki
6 who will be followed by V. Leihulu.

7 Is Leslie here?

8 (No response.)

9 UNIDENTIFIED SPEAKER: She left.

10 MS. LEE: She left, okay. Do you know if she's
11 coming back?

12 UNIDENTIFIED SPEAKER: No, she's not returning.

13 MS. LEE: Okay. Thank you. Robert Kozuki.

14 Mr. Kozuki?

15 (No response.)

16 MS. LEE: Okay. V. Leihulu.

17 MS. V. LEIHULU: Aloha mai kakou, na Kapuna, mai
18 kakou. I am Leihulu. Aloha.

19 I want to say Aloha to my ohana in the house and all
20 Hawaiians, and all the community people, everyone in the
21 communities.

22 My concern is dust, environment, cultural,
23 traditional, customary rights and practices, and health and
24 well-being as a people. Dust is one of them. As military,
25 why are you on our mountain? Most sacred to us are our

1 mountains, Mauna Loa, Mauna Kea. This is our home. We are
2 the host people. We are the host community. You need to
3 ask us permission before you come moving in here
4 desecrating, destroying, polluting; chemicals, yeah,
5 nuclear weapons, nuclear chemicals, and dust, yeah. Dust,
6 that's the air we breathe. Mahalo ke Akua for sharing this
7 air with us and the waters.

8 You'll be on top of our mountain where our waters run
9 down. All of that is from Akua. All perfectly, perfectly
10 well, pono. And you come on top of the mountain and that's
11 not good for us. I plan to have generations and
12 generations of grandchildren, safe environment, resources,
13 waters, air, and around our islands is water.

14 In those waters are the largest food chain in the
15 world. I grew up watching the military in south Kona, bomb
16 south Kona. Did all of you know that? We were bombed in
17 south Kona. Kapua, South Point. What did you do about
18 cleaning that mess up? What did you do in compensating us?

19 Most of the people living in south Kona, including
20 Molokai'i and Maui next to Kaho'olawe have skin diseases.
21 Have you noticed that? Regardless if they're Hawaiians or
22 non-Hawaiians. We have skin diseases. Where did that come
23 from? Why did Leprosy all of a sudden appear mostly in
24 Molokai'i Maui. Don't that say something about chemicals,
25 nuclear chemicals?

1 We got to consider this, people. There's people
2 going to be on top of our sacred mountain polluting it, our
3 waters, our air, but ke Akua had freely given to us his
4 resources, that is already fully developed. We don't need
5 man-made destruction or desecration to it. My answer to
6 military stakeout or come to our mountains is a'ole. No.

7 We have so many homeless Hawaiians because you have
8 our aina. Homeless in our own homes, that's not good, you
9 know. Go home and bomb your place, 'kay? Just like
10 Hokulea, go home and dig up your grandparents. Leave ours
11 alone. We don't need all this stuff.

12 I represent my family in south Puna, my extended
13 family. I am proudly to mention I am a member of the
14 Protect Keopuka Ohana. We are here to protect, preserve,
15 and perpetuate culture, traditions, customs, spirituality.
16 Hawaii is spiritual, and if we don't take care of it now
17 and allow outsiders to come here and rule us and tell us
18 what to do and how to do it, then we don't deserve home.

19 But we have been here for generations. We will be
20 here for many more generations, and we will speak up
21 because this is our home. And, yes, our aina can provide
22 for all the people agricultural lands and Judge Ibarra
23 right on it with Akua. Mahalo nui to Akua and Judge
24 Ibarra, and all those environmentalists, cultural people,
25 people with a heart. Not just three major volumes of

1 mumbo-jumbo words that means nothing to us. Life means a
2 lot to us. And I would love to know and see makala later
3 on when I'm gone in the next dimension, my future
4 generations safe from the chemicals, nuclear weapons, war,
5 and I feel by your presence being on our mountain you will
6 invite attacks. Nobody's trying to attack us now. Mahalo.

7 (Applause)

8 MS. LEE: Mr. Kozuki has appeared.

9 MR. ROBERT KOZUKI: Aloha, everybody. I'm here on
10 behalf of my Kapuna and for the people of Hawaii. I have a
11 small little geological lesson for you folks. As you can
12 see, I am no rocket scientist. Yeah.

13 This one bottle right here and this water represents
14 our mountain, our aina. This mountain represents the life
15 of our people, yeah. Very simple, yeah. This is our
16 water. This is what we live on. This is the mountain.
17 This is the water. Very easy.

18 I'm not a rocket scientist, but this is, basically,
19 what's going on here, yeah. We going to put this kind
20 bomb, yeah. This is one bomb over here, yeah. We're going
21 to put one on top of the mountain here and blow 'em up,
22 yeah? This is what this bottle has to say, you know, FDA
23 approved, you know, scientific kind, you guys. This is
24 what you folks say, the scientists and stuff like that.
25 All right.

1 Rain clouds in our tropical skies on the tops of our
2 island mountains then filter through the volcanic rock to a
3 natural aquifer deep underground. Hawaiian Island water is
4 purified naturally on its journey to you. So what I'm
5 trying to say here is what, Mr. Clarke, you like drink this
6 kine water, huh? No. We no like drink this kine water.
7 Our people not drink this kine water. All right. Very
8 simple.

9 And this is all I have to say, and hopefully, you
10 take respect to our people, our Kapunas, and this is very
11 important to us. So everybody pull together, and Aloha.
12 That's all I have to say.

13 (Applause)

14 MS. LEE: Our next three speakers, Mr. Hank Kekai,
15 Keaulani Mitchell-Coakley, followed by William Ahyou Akau.
16 So is Hank here? Hank Kekai.

17 MR. HANK KEKAI: Aloha. Another day in paradise.
18 Welcome to Kona. I'm Hank Kekai. This is my home. Sun
19 shines in Kona, rains in Hilo, snows in Kohala, and a
20 volcano erupts in Kahu. All you people are halfway to
21 heaven. So here goes the Hawaiian. I'm going to take my
22 best shot.

23 To you people, Aloha. I wish you people the same
24 thing. Welcome to Hawaii. This is God's country. I'm not
25 much of a speaker, but I just take notes and I follow

1 letters, which is so simple, like, A, B, Cs. Ocho, dos,
2 tres. White see whatever. But I using the letters and I
3 hope you people take it down.

4 A is archeological in sensitive areas. B is
5 biological significant areas. C, I put all the rest
6 together, it's called cultural resources. This is number
7 one on our list. You got to use them all and use it like
8 the lady -- the ho' lolo lady. I like her style. We need
9 more people like her in Hawaii. She's taking off the aina,
10 the family, the future. She even plant that tree. You
11 don't see too many people nowadays come up. That's her
12 heart in that tree, and it's willing to benefit mankind. I
13 love you for that, lady.

14 And on the EIS -- oh, yeah, no forget the tall, good
15 looking Hawaiian. Brah, I like your style. When you say
16 the pharmaceutical business, got to use all kind
17 ingredients. We need people like you. I'm proud that
18 you're a Hawaiian.

19 I'm not a Hawaiian. I'm not an American. I am a
20 sovereign. There is a great, great difference, ladies and
21 gentlemen. Right now America is a sovereign, so am I. And
22 that place where Saddam is, he is the sovereign, so don't
23 make any ideas that we gonna come here, set up this warfare
24 stuff, chemicals and all that. I say, hey, keep it out of
25 Hawaii.

1 My friend just got arrested in Honolulu when you
2 people were there. He's a very good friend. His name is
3 Kyle Kajihiro. He went to Puerto Rico. He asked me to go.
4 I said, "I don't know. What if I don't come back?" Puerto
5 Rico now is back to the people. He was one of the
6 activists that been there. I told him, why you go over
7 there? I go show 'em how we got back our Kaho'olawe. We
8 done it, people, and we are not a tribe, please.

9 George Bush, Senior let the world know that the
10 Island of Kaho'olawe, which was desecrated -- the island,
11 George Bush let the world know it was given back to the
12 Hawaiian nation. Remember people, not tribe. Nation.
13 Sovereignty.

14 So, President Clinton came over. I don't know what
15 he did. He apologized, nobody believe. That's supposed to
16 be a joke somewhere in there. He apologize, apologize,
17 apologize. Nobody believe. Us Hawaiians believed that it
18 was taken away from us. One Bush took it away, gave it
19 back to the nation. I don't know what this next one is
20 gonna do. He was here a couple days ago. Remember,
21 people, sovereignty.

22 But in the meantime, we need work, especially in
23 Kona. You know, I tell the people, Hawaiians don't have a
24 dirty word. You know how to swear like a Hawaiian?
25 Hawaiian don't like have dirty word. You want to swear in

1 Hawaiian, four letter word? At one time it was real funny.
2 It's spelled W-O-R-K. That's a dirty word. You see one
3 Hawaiian sitting down, you go, hey, brah, why you no go
4 work? But today, hey, that's gold. That's precious. We
5 need work in Hawaii.

6 The culture here -- now, I hope the Army when you
7 people come in, yeah, we know you bring in money. I don't
8 fight the Army. No way. You gonna lose. They got all the
9 weapons. Now, you know where all the weapons coming from,
10 from the terrorists. I say this with my heart. When Queen
11 Liliu'okalani said, hey, Hawaiians we no die. Let's give
12 everything back to the terrorists.

13 Now, people remember, this is new time, wartime, and
14 all of that. If Saddam gonna get all his stuff, build his
15 tombs and this and that, give us \$1 million as was promised
16 in the Constitution of the United States, that we will
17 survive as a Hawaiian nation and we will -- they will help
18 us get our sovereignty.

19 Promises are quickly broken. That's what like we say
20 over here in Hawaiian, they say shibai, but there's another
21 word. I just telling you shibai. It's Japanese style, you
22 know. You lie. You lie. You lie. Presidents don't lie,
23 including George Washington. He never cut the cherry tree.
24 He wen prune 'em. Aloha.

25 (Applause)

1 MS. LEE: Keaulani Mitchell-Coakley. She's shy.

2 MS. KEAULANI MITCHELL-COAKLEY: Aloha. My name is
3 Keaulani, and I come from a Hawaiian Trans School called
4 Kanu O Ka 'Aina and I need to say something that I've been
5 dying to say, but no one cares to listen.

6 You -- all of you guys, especially you from the
7 military, you guys have heard from the Kapuna and from the
8 people, middle age, but you haven't heard from us, the
9 children of the land.

10 From our schools called Kanu O Ka 'Aina, which means
11 children from the land from generations back, and it's
12 pretty important to us kids, because if you guys don't know
13 it, a lot of us kids come from homes that we shouldn't come
14 from where there is jail and other stuff, but without the
15 land, we wouldn't be here. We wouldn't be here today
16 because the haloa kalo gives us life, and without the land
17 we wouldn't be there. In Hawaiian means haloa our bruddah
18 is the kalo of the land. He's the one who takes care of
19 us, and we're supposed to take care of it back.

20 But if people come to Hawaii and then start bombing,
21 what is going to be the point? We're not taking care of
22 the land at all, especially the animals, like the pueo and
23 the pig. Some of them to us are our ancestors from Akua,
24 and if you hurt them, you're hurting us. You're hurting
25 the land. If you hurt the land, you hurt all of us, not

1 only the Hawaiians, but also everyone who lives here in
2 Hawaii; the pollution and us.

3 You hurt us by not letting us grow things here on the
4 islands, especially people in Kawaihae. Half the people --
5 some of the people here live in Kawaihae, me especially.
6 My family has not been in Kawaihae, may have not been
7 raised or grown, but some people have. It's not just the
8 land to us. It's a way of life. We want to be here.
9 Thank you.

10 (Applause)

11 MS. LEE: Mr. William Akau.

12 MR. WILLIAM AKAU: I do support the Stryker force to
13 train at Pohakuloa. Some years back the commander was
14 Texteira who commanded Pohakuloa. He called his uncle and
15 he had a long talk with his uncle. He wanted his uncle to
16 come out to Pohakuloa and to bless the area where the Army
17 is.

18 So, after they did their talking, then Robert called
19 me, asked me if I can pick him up and take him up to
20 Pohakuloa and I live in Kawaihae, so I said, fine. So I
21 went down to Pu'uanahulu, I picked Robert up, then we drove
22 up to Pohakuloa.

23 So while there, they pulled out -- they put us on the
24 helicopter. We flew out about 20-miles out in the open in
25 the back of Hualalai because the Army was going to put some

1 kind of special equipment within that area, so that's why
2 he needed his uncle to come and do the blessing of that
3 area.

4 Now, we talking of an area that is strictly for
5 training. So what Robert did, as he say the prayer, first
6 asking Heavenly Father, that any kapu was put on the land
7 for the past to remove those kapu so that the military can
8 move on and do their training.

9 Now, we talking within maybe 25 miles or 20 miles
10 square an area where the Army has the full responsibility,
11 but in due respect, the commander have the respect and the
12 love for the land. So that's why he needs his uncle's
13 advice, he need his uncle's support, so that's why we went
14 out to Pohakuloa and did -- we did say the blessing of the
15 land to whatever kapu was placed on the land in the past,
16 to remove so that the training for the military could move
17 on.

18 So for years this has taken place at Pohakuloa.
19 Nobody said anything because it was done right. Because
20 Texteira, being Hawaiian, he has that love and
21 understanding of what the aina means to him. Because some
22 of the aina has so much power that no matter what you do,
23 you're going to meet those challenges. So, he wanted to
24 remove all of this thing.

25 In other words, okay and to oka walea na mea maika'i,

1 so that's the reason Robert was called and we can do the
2 blessing and it did move on until now, when you hear about
3 the Stryker force, everybody's up in roar. Why? You have
4 no business. Let me tell you straight. It's the Army's
5 business. They're living within their boundaries. What
6 right have you? That's my question.

7 The Army protects us. They need to train. If they
8 don't train, what happens? They can't fight. So we
9 need -- we need the military here. We need them to train
10 so that if anything should happen, they're ready. So
11 that's the reason I support this Stryker force.

12 It's something new. The machine on eight wheels, 20
13 tons, it's really something. What are they carrying in
14 this weight? It's none of my business. It's the Army's
15 business. It's to protect us. Why should we, as citizens,
16 fight the Army? I have a lot of respect for the military.
17 I have uncles who was in the military who lost their life.
18 Why? To see that we still have the freedom. That's very
19 important.

20 That Aloha spirit is very important to all of us.
21 So, this is what I want to express, you know. I support
22 the military. Thank you.

23 (Applause)

24 MS. LEE: We'll call a couple more speakers up and
25 then we'll take a break because we'll be going a little bit

1 after an hour. I hope I get this right. Rollin Frost
2 followed by Hiko Hanapi.

3 MR. ROLLIN FROST: Aloha. Thank you for coming. I
4 thought I'd never hear it again, love it or leave it. I
5 thought I'd never hear it again. I'm a veteran,
6 25th Division, decorated for heroism, pulled a guy out of a
7 copter. I'm a patriot. I don't want this here.

8 The war, we don't have to go to war. Terrorism is
9 not a war. It's a CIA exercise. The Army has a history of
10 ripping us off in Hawaii. Not just second World War, woe,
11 they took over. They tried that Agent Orange. They tried
12 out DTT here. They sprayed our forest in Kona with anthrax
13 like stuff. They think they can play here. Well, they
14 could. Nobody objected. You're all too busy being
15 Americans. You'd be thrown in camps. You got to be
16 American, love it or leave it doesn't work now, my friend.
17 I won't love it or leave it. I love it, and I won't leave
18 it. I'll defend it.

19 Why am I here? I'm a scientist. I got some extra
20 fees. I got a master of science degree in environmental
21 health. I spent seven years in Dallas letting fluid flow
22 through porous media; sandstone, limestone, bronze,
23 freshwater.

24 I spent 25 years in Hawaii doing environmental work.
25 I was once in charge of all the pollution on Kauai for the

1 Health Department. I used to do the EPA laws, and enforce
2 them on Kauai. You're not going to get any help from the
3 Health Department. You're not going to get any help from
4 the EPA, guaranteed. I've been there. The reason I'm
5 here, I want to speak about one thing, the destruction of
6 the stone.

7 I was there in 1960, '61, '62, fire direction
8 control, shooting 105s and 155s. We used to dump car
9 wrecks in the slopes of Mauna Loa and shoot 'em up. We
10 hated it. Two months duty there. Run around in a jeep,
11 duct tape in my hands, buttoned up in a hundred degrees.
12 You couldn't see any skin.

13 The dust. Why so much dust? I didn't realize it at
14 the time. I was only 20. I didn't realize the car wrecks
15 we were blowing up over there had asbestos in the clutch
16 lines and brake lines, and every time we hit one, we'd blow
17 it into a 50-foot cycle mess that would never go away.

18 But when I was there, one thing I did notice was the
19 dust, because every time we rode a vehicle over there, we'd
20 crunch it. Lesson in geology: You know what that's up --
21 what that's like, it's like a sponge. Imagine a sponge,
22 huh, made out of stone. It's got pukas in it. Water gets
23 in the pukas, dust collects, little animals, little plants,
24 it starts to grow. You come along with a truck, you roll
25 over it, you know what happens? It turns to dust. That's

1 what we did up there.

2 We used Duce and a Halfs, some 5 tons. It was all
3 ruts. I remember it very well. I used to know every pu'u
4 by heart. Surveyed them all. Used to direct the fire.
5 Dust tracks, tracks, and tracks. A lot of the areas we
6 were in, I will tell you, probably 40, 50 percent dust
7 tracks. It goes down below ground level about that much
8 because that's what happens when you munch the lava into
9 that dust. You know what happens? Nothing ever grows
10 there. Never.

11 I take little tours in the Hualalai. I like to take
12 them out of the golf forest and the gift forest, and across
13 the 1801 flow. This is beautiful stuff. It's 200 years
14 old. You look, that little tiny likens a plants, little
15 miniatures, you step, it crunches like snow. Your
16 footprint's going to be there for a thousand years.

17 The footprint at Pohakuloa from what's been done
18 already, from what I helped to do 40 years ago is still
19 there. I go up there, they're all there. There's a lot
20 more of them. What norm? You look at the old Duce and a
21 Halfs that we used to run, 5,000 pounds on 10 wheels. They
22 probably have a footprint.

23 I was just going over a little bit in my head, loose
24 field engineering. I'm an engineer. I figure probably a
25 Duce and a Half, 5,000 pounds, 10 wheels, half a foot per

1 wheel, five square foot of rubber on the ground, 5,000
2 pounds, it's about a thousand feet -- a thousand pounds per
3 square foot. When we're riding our trucks around the lava,
4 we managed to destroy a lot of ground.

5 What's the Stryker like? 40,000 pounds on eight
6 wheels. Maybe it's got bigger wheels. Maybe eight square
7 foot of rubber on the ground. What are we talking about?
8 5,000 pounds per square foot. Roughly. Good enough for
9 government work. Five times more weight crushing the soil.
10 It just crushes, folks, down to sand and nothing ever grows
11 there. That's what happens when you crush that nice little
12 sponge that used to give life. It don't give life no more.

13 You know what I got to say, I use to run EISs at the
14 University. They all came in, and we'd send them out to
15 professors. I know EISs. I see one that big and that
16 thick, it's a little laughable, but that's the way they do
17 it. I don't see much in there about the loss of that
18 spongy ground, that life-giving ground, the permanent loss
19 of it.

20 When I was at Fort Ord, we had some tracks in the
21 ground, and like California, dust tracks never healed up.
22 Spent lots of our time with bayonets putting ice plants in
23 the ground trying to heal it because they ran tanks around
24 there and it was near the ocean and they put the ruts in
25 and the dust, and they never healed. So they took the

1 tanks out of Fort Ord.

2 5,000 pounds per square foot, folks. These Strykers
3 are going to turn it into a dust bowl. It will never heal.
4 There will never be life growing on it again. Now, if you
5 want to give this 20,000 acres to the military, and to the
6 military I'd only say, if you expect the people of this
7 island to go along with this, here's my suggestion, go look
8 at Pohakuloa. Look at what already has been done there.

9 Has the Army been a good husbandry of the land? When
10 you go up there, I'd like to ask the military for over
11 flag. I'd like to see some pictures of Pohakuloa and what
12 you've done there so far. How much land disappeared? How
13 much is turned into ruts in the road, dusty ruts in the
14 road? Fifty years of husbandry says no, no way. I've seen
15 what you've done. Show us what you've done up there.

16 I don't want to give you another 20,000 acres to turn
17 into a dust bowl, not with 5,000-pounds-per-square-foot
18 vehicles. I'm sorry. Let them go, you know, to where they
19 train with tanks. It's not right here. It isn't right,
20 folks. It's a permanent destruction of the land. Thank
21 you.

22 (Applause)

23 MS. LEE: One more speaker and then we'll take a
24 ten-minute break. Is this Hiko Hanapi?

25 MR. HIKO HANAPI: Aloha Kakou. I came to this

1 meeting because I was asked to. I'd like to say Aloha to
2 you also. I had to do a quick study here, pulled out the
3 information that you have in the back there as well as some
4 of the advocacy material there.

5 My name is Hiko Hanapi. I live in Puako. I'm not
6 Kama'aina to this side of the island, but I do reside here
7 now. I'm a native Hawaiian artist, so I do derive a lot of
8 my inspiration from the natural beauty of Hawaii. I also
9 sit as a board of director on the native Hawaiian cultural
10 and arts organization. We're a nonprofit, but I'm here for
11 myself personally, not as a representative of my
12 organization.

13 I noticed that in the summary of impacts on cultural
14 resources, the cultural resource area and all of your
15 information categorized here is the most hard hit, and
16 personally, as a cultural practitioner and an artist, I
17 find that insane. Mainly because you destroy an
18 archeological site, you destroy Hawaiian history forever,
19 and it's just unconscionable. I can't accept that. It's
20 not tolerated in any culture.

21 Many of you before me have said some great things.
22 Mr. Bigelow, I learned one way to empower you tonight and
23 that is to say I would like this to change to significant,
24 and these categories here that you have, cultural
25 resources, change that to significant because it is

1 significant. You cannot guarantee like you did in
2 Kaho'olawe that archeological sites will not be destroyed.
3 They will be. And we can't take that.

4 Not only that, the Pohaku itself -- Pohakuloa, I
5 mean, that is our temple. Mauna Kea, Waokea, Awake'e,
6 Kahaloa, I heard our keiki, our 'opio over there tell us,
7 yes, we do that. We know this, but do you know the culture
8 behind that mountain that's up there. Mauna Kea the white
9 mountain. It's an incredible place. It's an altar for
10 those of us who have iwi.

11 That's the other thing. There are bones up there.
12 There are people. I have ancestors that are buried up
13 there. So I can say, yes, I join many of the Hawaiian
14 people that come to Maui that are here to say that, and I
15 can prove it, too. So we have a personal tie to this land,
16 the hana'i'o hana.

17 We have ties to many lands throughout these islands,
18 but if you go back eight or nine generations, you'll see
19 the -- my ohana lived here, up there, around Hamakua and
20 coming into Kohala.

21 The other issue is biological. You have -- the next
22 area that's impacted is the biological resources. These
23 are the living resources. These are animals. These are
24 plants. You destroy that ecosystem up there, it begins a
25 precedent, and you can checker your way through this island

1 as our lands are divided up between ceded lands and private
2 lands. That land up there is ceded lands. It's Hawaiian
3 lands. It belongs to us. We come from there, and we don't
4 want to see it destroyed.

5 One of the issues that I bring forward in my work as
6 a person who illustrates both contemporary and ancient
7 Hawaiian cultural beliefs and traditions, and even into the
8 visions of the future, one of the things that I choose to
9 come and speak out about is cultural genocide and this is
10 what this is. Thank you.

11 (Applause)

12 MS. LEE: Let's take a ten-minute break, get
13 refreshed, stretch, breathe some air, and we'll be back
14 here at 8:25, and we'll resume with the rest of our
15 speakers.

16 (A recess was taken from 8:15 to 8:25 p.m., and there
17 were further proceedings had on the next page.)

18

19

20

21

22

23

24

25

1 MS. AMARAL: We're going to call people back
2 together again. The dangerous thing about taking a break
3 is you never know if you can get people back together.
4 It's always a risk.

5 So while people are meandering back, my name is
6 Annelle Amaral. I'm the other facilitator here with
7 Miki Lee.

8 We have about 20 more speakers to go. So I'll
9 remind you again: For those of you that cannot stay, if
10 you like, there is a court reporter here behind the
11 lattice screen, and she can take your testimony for the
12 record at any time, if you just go to her, and she'll
13 take your testimony. So if you don't want to stay until
14 late this evening, then, by all means, take advantage of
15 her.

16 The second thing I'll point out is, that if we
17 each stick to five minutes, then we should be done in
18 about two hours. If each of us takes ten minutes, then
19 it's four hours, and -- like that. We're happy to stay
20 until the last speaker has spoken. But it would be nice
21 if we can kind of restrain ourselves, get our thoughts
22 together before we come up here, and try and stick to the
23 five-minute -- to a five-minute period, which is a long
24 time. I'm going to be up here, handing out a card and
25 reminding you when it's -- you're winding down, and

1 asking you to summarize. I don't mean to be rude; it's
2 just kind of my thing up here.

3 For those of you in the back of the room who
4 choose not to join us in the front of the room, that's
5 fine. All we ask is, that if you're going to have a
6 conversation back there, could you take the conversation
7 out of the room, because it's too hard to hear what
8 people are saying in the front of the room. And you see
9 how that immediately got everyone's attention. Did you
10 hear the silence immediately take place? Yes, siree.

11 Okay. It's quieting down now. Nicely done,
12 nicely done. Thank you very much.

13 All right. The next speakers are -- first
14 there's Daniel Morimoto, followed by Alvin Akina,
15 followed by Hank Kekai.

16 Daniel?

17 MR. DANIEL MORIMOTO: It's no fun being the
18 lead-off speaker. The lady who started about an hour or
19 two ago said certain things. We've heard a lot of
20 interesting testimony so far this evening. I don't feel
21 particularly charismatic or articulate this evening. I
22 have a few things to say.

23 First of all, thank you to the Army for its
24 hospitality and its rigorous adherence to the technical
25 aspects of going through this procedure.

1 I'm Daniel Morimoto. I live in Waimea. I moved
2 to Hawaii in the late '60s to go to school; I stayed. I
3 have been in Waimea about ten years. I'm a single parent
4 of a teenage daughter. I speak for myself, for her, and
5 for all the unborn. And I only take this upon myself
6 because no one else has mentioned them yet, the American
7 Indians, of which I'm very clear the Hawaiians are not a
8 tribe. The American Indians are very clear, the
9 (inaudible) Indians in particular, they're very clear
10 that whenever they make a major decision, they consider
11 all the consequences unto the seventh generation. I
12 would submit to this audience and indeed the presence of
13 the Army in this state, in these islands, and indeed the
14 American consciousness as it's now constituted, doesn't
15 even come close to considering things out to the second
16 or third generation. So, clearly, I'm going to speak in
17 opposition to the Stryker, but I'm going to try to be a
18 little more articulate than that.

19 Since I find myself a little bit nervous in
20 public speaking, I'll start off with a story.

21 I have a truck, and I was coming through Kona
22 today, past the K-Mart turnoff; and we don't quite have
23 the traffic jams in Waimea yet that you guys have down
24 here in the afternoon. There was this poor, unfortunate
25 chap that was kind of faded into the center lane, and he

1 was totally stalled, sitting there, just dumbfounded,
2 perplexed.

3 And I had offered him, "Well, can we push you
4 off?"

5 And he said, "It's uphill."

6 And I said, "Well, try." And I jumped out, and
7 lo and behold, two or three or four other folks stopped
8 right away, and we took his car and pushed it off the
9 road. There was a black Marine, there was a coffee
10 farmer, and there were two local surfers. And we all
11 jumped in our trucks and took off.

12 Well, I have an uphill battle tonight. I don't
13 really want to antagonize all the people that like things
14 as they are, that like PTA, that want the Stryker, that
15 favor Bush, that are okay with American imperialism, and
16 want to perpetuate the status quo. I don't want to
17 antagonize them or further polarize this issue. But
18 that's my uphill fight, because it's those people that
19 are going to have to wake up. Speaking to the choir is
20 easy. Going to an environmental rally is fun. We can
21 sing some songs, and it's the '70s all over again, I
22 guess. But Vietnam didn't work; we didn't learn
23 anything; we're doing it again.

24 You know, Bush was able to start this war
25 through, zippo, you know, in just a few weeks, a few

1 months; and look where we are now. We have no support
2 from the U.N.; we have no other countries that want to
3 give us any troops; we have nobody else that's interested
4 in nation-building, democracy. And these are all
5 cherished ideals. And, I guess, for all of my life I
6 thought they made a lot of sense. But, golly, we found a
7 country based upon freedom and slavery. And then we did
8 (inaudible); and then we did Selma. Oh, and we did --
9 well, the Japanese internment. And then we did all those
10 people in the base in Cuba. It's nowhere. It's all
11 American soil, so it's just in limbo. Oh, I don't know.

12 Okay. I was here five years ago in this room,
13 and there was the dog and pony show. They were even
14 better pupus then, and there were a lot more shakers and
15 rollers because they wanted to build a Saddle Road.
16 Guess what, folks? It's been five years, and there isn't
17 a new Saddle Road yet.

18 And I, too, have visited PTA, but it wasn't in a
19 helicopter and it wasn't for a blessing, and it wasn't
20 with the permission of the commandant. It was because I
21 was part of a suit in which the hearings officer decided
22 that he wanted to visit the place where they wanted to
23 put the road through the (inaudible) Forest and the
24 (inaudible) Forest, and I had a chance to see the places
25 where you don't go when you're taking a little tour,

1 where you don't go when you go hunting or walk or take a
2 hike, when it's open for that. No, no. I was back
3 (inaudible) Areas 1, 2, 3, 4, over by what's left of the
4 (inaudible) habitat for the (inaudible), where they want
5 to put the new road. But guess what, folks? There isn't
6 a new Saddle Road yet, and the suit's now at the Hawaii
7 Supreme Court. And, by golly, maybe Judge (inaudible)
8 doesn't want to get reappointed. I don't know; I don't
9 know. Maybe he's not worried anymore about (inaudible)
10 things. Maybe he's not worried anymore about the
11 Judicial Selection Committee. Maybe he's not even
12 worried about pissing off all the developers in Kona.
13 Maybe he wants the laws to be enforced the right away. I
14 don't know. But he took a chance. And maybe the Supreme
15 Court took a chance, too, on our suit. I mean, I'd love
16 to win and -- you know, PTA and all those guys.

17 Hey, I'm going to go over, okay, but just a
18 little bit, okay. It says one minute.

19 So it's an uphill presentation to speak to the
20 people who think that there should be more training and
21 more stuff. Well, clearly, clearly the economics of
22 weapons and of war and of politics isn't working. On the
23 world stage, there aren't people that are impressed with
24 our great democratic country anymore because we're not
25 walking the walk. We can talk it okay, but we're not

1 walking it. We didn't go and get other people to go
2 along with this perhaps necessary thing of stopping this
3 perhaps dangerous man. But, you know, I'm not losing any
4 sleep over Hussein, you know, waking me up at night. And
5 I wonder if anybody else is.

6 I mean, did we really need to go and have an
7 81-billion-dollar budget to take care of this little
8 training exercise? I don't know. It doesn't seem to
9 make a lot of sense.

10 Let's see if I can get a bit more focused here.

11 My friends on Oahu, including Kyle Kajihiro,
12 that got arrested because they had signs, and I was told
13 that everyone was standing out by the road because this
14 is private property and you can't have signs; so I
15 brought my own sign, which I'm going to hold up in a
16 second. And I want to tell you one more story, first.

17 Back in 1951 or '52, my mom made me watch TV
18 when they were inaugurating President Eisenhower. I was
19 three or four. I had no idea what this was. But I
20 remember watching it. I think there were umbrellas and
21 there was rain and there was the anthem and there was a
22 parade; and then he was the president for eight years.
23 You know, I was oblivious through my childhood over in
24 Pennsylvania. But, then, he said something when he left.
25 He warned against the hazards of the military industrial

1 establishment. Well, guess what, folks? Power's a drug,
2 okay. Money and power is a drug. And there's a lot of
3 people around here that make a lot of money off of the
4 Army having a base. And there's a lot of corporations
5 that are making a lot of money because they've outsourced
6 the reconstruction of all the things we blew up and
7 destroyed; now we're going to fix them, and that's going
8 to be paid for. And American corporations go right in
9 there. They're going to do their patriotic duty.

10 You know, maybe this is going to change in our
11 lifetime. Maybe enough people throughout the world and
12 in America are going to wake up and say, Wait a minute,
13 we can't keep doing this; We can't keep having corporate
14 interests being more important than what the people
15 think.

16 I voted for Nader. Was it a mistake? I don't
17 know. It didn't matter in Hawaii because we're all
18 democrats. But, gee, Linda got in. Well, okay. Maybe
19 that will make a difference. Maybe we'll get more Bush.
20 Maybe he'll have another war. Maybe, you know, these
21 things will happen. But in my backyard, I don't want to
22 have more bombs. I don't like the ones we have now. I
23 don't want to have more dust. I don't want to have more
24 bones desecrated. You know, I don't know about you guys
25 as far as seeing walking spirits (inaudible) and

1 whatever. But we don't need that, more of those people
2 walking around. They need to be at peace. You know,
3 this is not just a Hawaiian thing. You talk anywhere.
4 Graves, any cultures or whatever, you don't mess with
5 those people. They're there for a purpose. They're
6 there to protect us and try to keep us pono and do the
7 right thing for our kids. And you go messing around with
8 their graves, you're asking for trouble. It's, you know,
9 common sense.

10 Okay. Since I'm way over, let's see what else I
11 can say here that makes any sense.

12 To the Army: Gentlemen, have you no shame?
13 This General Shinseki, who stewarded this thing, who
14 decided where the contracts are going to go or whatever,
15 he quit the Army, he retired, and he's got 20,000 shares
16 of General Dynamics. Why am I surprised at that? All
17 these -- what about the 48,000 acres around Waikoloa,
18 where they put this instant community, that has never
19 been unordnanced for (inaudible)? That's very
20 (inaudible) in there, too.

21 Well, what about -- well, gee, you know, how can
22 I talk about ceded lands? You know, I wasn't born here
23 and I don't have the koko; but that whole thing up there
24 is ceded lands. And these guys are proceeding as if they
25 can go through the U.S. system and just take some more.

1 And Parker's going to get new trustees. Have you read in
2 the paper? All three trustees are retiring, all at once.
3 And they're going to appoint a committee that's going to
4 take nominations, and the committee's going to decide who
5 the nominations are going to be. And, then, the three
6 Parker trustees are going to appoint the new trustees.
7 But maybe in the meantime they'll sell the land to the
8 Army for the extra 24,000 acres.

9 You know, you see there's a shell game going on
10 here. I mean, everybody that's chuckling knows about
11 that. This is Hawaii, and that's how it works and
12 whatever. I don't know.

13 Okay. So I'd like to say something, you know,
14 to end on some kind of, you know, bright, loud note, do
15 something charismatic. I thought about such things as
16 stripping off my clothes and walking out naked or coming
17 in with dry ice and making some Pele-like fire or
18 whatever or speaking somehow of my moral outrage that all
19 these things go on and it's still business as usual.
20 But, hey, me, too. I've got a car; I've got a truck;
21 I've got a daughter that's going to go to college. I
22 like to go and party. I have my little, you know, set of
23 friends at the golfing house. And, meanwhile, you know,
24 the EIS grinds its way through. But Jack Kelly's here;
25 I'm here; (inaudible) going to be speaking tomorrow night

1 in Hilo. There are some people that are using the system
2 to expose its own inadequacies; and this meeting is for
3 that, too.

4 So, thank you.

5 MS. AMARAL: Alvin Akina, followed by John Ray,
6 followed by Lani Kai.

7 MR. ALVIN AKINA: You gotta excuse me. I don't
8 have a speech written up. Just the gentleman (inaudible)
9 has spoken for me. I want to make it short and maybe not
10 too sweet.

11 But here I have over 26,000 signatures; and I'm
12 sure you all know what this is all about. This is all
13 the Hawaiian ancestors in the past, all come before you
14 today to say a'ole in 1898 and the year 2003 and forward
15 is a'ole once again. Short and sweet.

16 Gentlemen, you need to get your acts together.
17 Here you're spending 87 billion dollars of taxpayers'
18 money in Iraq; then this is where you should go to train.
19 Go there. (Inaudible because of applause.) We have been
20 (inaudible) for the last 2400 years, if I understand
21 history. And history came to me in 1998. And being an
22 activist in my own mind at that time prior to that, I had
23 misconceptions of who I was; and in 1998 I found out that
24 I wasn't an American. So I took this home to my dad; and
25 he resides with me at this time. So I said to my dad,

1 "When did you become an American citizen?" after I found
2 out the truth for myself, whatever these thoughts from
3 the last five or six years. He says -- he told me that
4 he was an American. I said, "Okay. How did you become
5 an American?"

6 He said, "Well, I was born an American."

7 "Okay. What was your dad?"

8 And he stated to me he was -- "Oh, he was
9 Hawaiian."

10 "And your grandfather?"

11 "Oh, he was Hawaiian."

12 So I asked him once again, "How did you become
13 an American?"

14 "I was born."

15 "Oh, you was born. Do you have any papers to
16 that effect? Do you have any documentations to that
17 effect?"

18 "No. But I retired from working at Hickam."

19 "Okay, okay. That's fine. But you not really
20 sure of who you are."

21 He said, "No, I'm an American." He's 80 years
22 old today, so I'm not going to stay there and confront
23 him with ideology. But I'm just going to -- I'm just
24 here to take orders from my ancestors that guides me what
25 I need to do at this present time. It's not only for

1 myself and everybody in this room; it's for my
2 grandchildren, my great-grandchildren, grandchildren to
3 come.

4 I work in the hotel industry, and "aloha" and
5 "paradise" is used around me a lot. I'm a doorman, so I
6 hear all of the visitors come from all over the world.
7 And when they leave here, I see womens talk and cry. And
8 as I look at them crying -- and they're not from here --
9 they cry from the heart; and as I approach them, I ask
10 them, "Why are you crying?"

11 "This is such a special place." Oh, that
12 touches me; that really touches me.

13 And here, because you use the word "paradise",
14 paradise is the first step before we go to heaven. Now,
15 if this is paradise to all the (inaudible) who come
16 around the world, then, gentlemen, I suggest that you
17 move this military thinking away from us. We are a
18 target. The technology today is that within a hundred
19 miles radius, they drop a bomb, and we're affected by it.
20 1941, only Pearl Harbor had military installations, was
21 attacked. Today, the press of a button eliminates all of
22 us. So I suggest that you take it to the enemy. There
23 is an enemy in the world. Take your bases and all what
24 you have, all the technology that you have, and move it
25 closer to the enemy's borders. (Inaudible because of

1 applause.) Not this time; not this time around. Because
2 I know -- I believe the military -- in every country
3 there's a military force that controls; but behind all
4 those military forces is the bankers. Let me make this
5 clear. The bank is what's controlling all of this. But
6 we don't need that part of it. Yes, we need jobs and we
7 need all of this. But we don't need the military at this
8 time. We don't need to be put under this mold. So we
9 are (inaudible). We give all of our aloha; we expect a
10 lot of aloha back. Now, no stop aloha from flowing,
11 because when that stops, the military and the tourism
12 will not be here. No let the aloha leave us. This is my
13 mana'o to all of you, to everyone in here, and mostly to
14 the military at this time because the way the world
15 situation is. Your Commander-in-Chief, who (inaudible)
16 John Wayne, and that don't cut it anymore. Put him
17 (inaudible), let him get out front here and go fight the
18 enemies (inaudible because of applause). (Inaudible) you
19 gonna get out? Occupation of Iraq is about six months?
20 They said they wasn't gonna be there. Boys went in May.
21 They still there. They're gonna be there for the next
22 five years, ten years. They're gonna be like that here
23 in Hawaii. Military occupying us. And if that's what
24 they want, then go there. They got the oil. We don't
25 have oil. We don't have anything that you need from us.

1 You don't need. Go do your wars over there. You want
2 war, go over there. (Inaudible because of applause.)
3 Come back as visitors, R&R, taking your R&R. But no use
4 our aina anymore for desecrating it. That's why I voice
5 my opinion tonight. And this is for my ohana, my
6 immediate ohana that's alive today and all my ancestors
7 of the past and every one of you with the koko. It's in
8 this book. (Inaudible because of applause.) French,
9 Chinese, English, and (Hawaiian word). If I'm in France,
10 I'm a French; if I'm in China, I'm a Chinese citizen; if
11 I'm in England, I'm an English subject. In Hawaii, I'm a
12 kanaka maoli first. And a host country. We are the host
13 country. Understand this, "host" meaning (inaudible),
14 come, enjoy with us. But no bring mischief; no bring bad
15 things to us.

16 So I'd like to leave this on the note that I
17 thank you for having this meeting. And I'm sure you're
18 going to be hearing more of this same things that's going
19 to be brought up in future meetings. So the thing is to
20 cut this thing short. And I see we are divided in this
21 house, but that's fine. It's good for division. It's
22 good for us to get together and talk about it. But I'm
23 against the military on this island. Go stay Honolulu.
24 No come back -- don't come back to the Big Island. This
25 is our home. This is where we can take care of all the

1 people.

2 Thank you.

3 MS. AMARAL: John Ray, followed by Lani Kai,
4 followed by Ronald Fujiyoshi.

5 MR. JOHN RAY: Aloha, and good evening.

6 I'm John Ray. I'm a Waimea resident. I'm also
7 President of the Waimea Community Association and
8 Chairman of the South Kohala Traffic Safety Committee.
9 And we haven't taken a formal stance in regard to the
10 plan, but we have had presentations about the military in
11 terms of the plan that's before you tonight. So I just
12 want to share some comments, some discussions from the
13 community in my sense of the major issues and concerns.

14 And, really, the major issue of discussion that
15 I've been aware of has to do with traffic impacts. And,
16 basically, I think most people are very pleased in regard
17 to the proposed plans for the upgraded tank trail, which
18 will move a lot of the traffic off of the highways, and
19 the improvements to Bradshaw Air Base and bringing in
20 more materials and equipment by air rather than in the
21 harbor and the road.

22 I've also received a lot of positive feedback
23 from users down in Kawaihae, especially the folks that
24 have been involved in putting together the surf park down
25 there. The military has been extremely supportive of

1 being able to create that surf park and operate it down
2 in Kawaihae.

3 And, lastly, in regard to concerns expressed or
4 areas of controversy -- I think David Bigelow, Waiki'i
5 resident, summed it up pretty well. The major area of
6 concern I've heard is impacts to the proposed lands for
7 purchase in the Keaumoku area and mostly concerns over
8 dust and fire and that those be mitigated. So I just
9 wanted to pass along those comments tonight.

10 Thank you for coming.

11 MS. AMARAL: Lani Kai, followed by
12 Ronald Fujiyoshi, followed by Jim Albertini.

13 MR. LANI KAI: Aloha. I stand here with this
14 on. This is a kie. I was taught by my kupuna that this
15 represents my ancestors; and I walk with my ancestors.
16 And I'm here to represent my ancestors; I'm here to
17 represent future generations of the world. And I feel
18 your ancestors here, as well; and they're all watching
19 us, just like my ancestors are watching us, watching
20 myself. And what my ancestors tell me is that our focus
21 should not be war; it should be peace. We've already
22 mastered war. Now it's time to learn to master peace.
23 Your planet is dying. Your people are dying. I believe
24 the Bible refers to it as turning weapons of war into
25 plow shirts. The Bible is also the cornerstone of

1 western civilization.

2 I have with me two documents, two exhibits.
3 Exhibit 1 which is the opinions of the Office of Legal
4 Counsel of the United States Department of Justice,
5 consisting of selected memorandum and opinions advising
6 the president of the United States and the attorney
7 general and the executive officers of the Federal
8 Government in relation to their official duties.

9 In 1844, Senate rejected the Annexation Treaty,
10 negotiating with Texas by President Tyler, 13 Congress
11 28, First Session, 652, 1844. Congress then considered a
12 proposal to annex Texas by joint resolution of commerce.
13 Opponents of the measure intended that the United States
14 could only annex the territory by treaty. Supporters of
15 the measure relied on Congress's power under Article IV,
16 Section 3 of the Constitution of the amended -- of the
17 United States into the nation.

18 The second exhibit document I have is what is
19 called Joint Resolution 55, (inaudible) Resolution. This
20 is the only claim that the United States has over the
21 Hawaiian Islands, the Hawaiian Kingdom. This is an
22 internal piece of legislation, not to extend the
23 boundaries of its own country, the United States -- or
24 excuse me -- the Hawaiian Islands, (Hawaiian word), as we
25 all know, the south side of the United States.

1 Therefore, that makes your Resolution 55 not a binding
2 contract. It's illegal. These islands do not belong to
3 the United States of America. It belongs to the Hawaiian
4 Kingdom. I stand here as a subject of the Hawaiian
5 Kingdom, and I request that the United States Army, as a
6 Hawaiian subject, to pick up your weapons of mass
7 destruction and leave. The Hawaiian Kingdom is a mutual
8 country, recognized by the world a neutral country, like
9 Switzerland. And if the Hawaiian Kingdom was allowed to
10 continue, it would have been like Switzerland, a neutral
11 country of the western hemisphere of this planet. But it
12 wasn't allowed an opportunity. It was cut; it was
13 stolen; it was taken away. And now the world suffers.

14 The Hawaiian Islands are said, by scientists, to
15 be the endangered capital of the world, the endangered
16 capital of the world. And if we continue on this course
17 of diplomacy that the United States is pursuing, the
18 world is going to be an endangered capital of everything.
19 Your polar caps are melting, your oceans are depleting,
20 your nation is on fire, and the other half is flooding.
21 The planet is in decline. Start learning to master the
22 art of peace. You've already mastered the art of war a
23 hundred megatons of TNT over.

24 Mahalo.

25 MS. AMARAL: Ron Fujiyoshi, followed by

1 Jim Albertini, followed by Chris Gaughen.

2 MR. RON FUJIYOSHI: Aloha, everyone.

3 I wanted to especially thank the kupuna who have
4 come tonight and share the mana'o.

5 My name is Ronald Susumu Fujiyoshi. I am the
6 interim pastor of the Nuuanu Congregational Church. I
7 sit on the Justice and Witness Board of Directors of the
8 United Church of Christ, a national church, and I sit on
9 the Reconciliation Committee of the Hawaii Conference,
10 United Church of Christ. So I wanted to come and speak
11 on record as a non-Hawaiian Christian in opposition to
12 the Stryker.

13 I feel -- I feel that the criteria that they are
14 using is so narrow that it doesn't include the criteria
15 of justice; and I think the criteria of justice should be
16 fundamental in making the decisions about what happens
17 here. I served in Japan as a missionary for 15 years,
18 working with the Korean minority, who are discriminated;
19 and in Japan we use the word "saite ron". "Saite" means
20 a minimum or the minimum level, and "ron" means an
21 argument or a theory. So we're using a theory of the
22 minimum or the pits, you know, to say we need jobs,
23 therefore we should build prisons or we should bring in
24 more military money. We should be thinking of the best
25 kind of jobs that we can bring to the Big Island.

1 When we think of the land, I think the first
2 western understanding of land in Hawaii dates back to the
3 Great Mahele in 1948 -- 1848, sorry. And my
4 understanding of Kamehameha III at that time was he wrote
5 the law to ensure that the land always was in the hands
6 of Hawaiians. Somehow that has been perverted; and, so,
7 something else has happened. And, so, I believe that
8 there is no clear title to the land that the state has.
9 And, so, you cannot move on doing something like this
10 unless you really have clear title; and I don't think the
11 state has it. And I think, even in the U.S. law, Public
12 Law 103-150, which is American law -- you can read the
13 whole thing for yourself, but I just wanted to read one
14 of the Whereases -- it says, Whereas, the indigenous
15 Hawaiian people never directly relinquished their claims
16 to their inherent sovereignty as a people or over their
17 natural lands to the United States, either through their
18 monarchy or through a (inaudible) or referendum. I think
19 even U.S. law is saying that the Hawaiians have never
20 relinquished the land to the United States; so you cannot
21 use U.S. law in Hawaii and claim that you have the right
22 to the land.

23 I think in the Bible, it's based on something
24 that's called justice and righteousness; and
25 "righteousness" in Hawaiian is "pono". And I think that

1 was the basis of the whole understanding of what is
2 right, that you have to be just and right for everybody,
3 yeah, not just for a few. Everyone was obligated to take
4 care of everyone else. That's why we have the Ten
5 Commandments that says, Thou shalt not kill. But the
6 whole Stryker concept is based on killing. And I think
7 we who call ourselves Christian have to take a stand. I
8 don't know how many of the military people claim to be
9 Christian, but I think it's a real conflict to be in the
10 military, fighting to -- as part of weapons that are
11 killing people, to remain as a Christian.

12 I think, as pointed out earlier, that Christians
13 have an obligation to be good stewards; and I think the
14 stewards are not over for all of creation but for the
15 land, as well. And I think the -- we have to go to
16 criteria that is just and not so narrow, that it just
17 goes around the law. I think, if I keep count of all of
18 the past hearings, that it's overwhelmingly people
19 speaking out against the Stryker.

20 Now, if you would take just comment majority
21 vote, then you know that they're not gonna do this;
22 right? But, somehow, the people who make the decisions
23 are going to work around it; right?

24 We know from experience that it's going to be
25 done.

1 So what is the criteria they're going to use?

2 They're going to be using such a narrow
3 criteria, that plays games with what is just and right.
4 And I just wanted to go on record as a Christian that
5 this is not right.

6 Finally, I wanted to quote a good theologian --
7 the good theologian is Queen Liliuokalani -- in her
8 Hawaii story. Now, she wrote this story to Americans,
9 yeah. And I want to just quote the spot, because she
10 quotes in the Bible, and she says, Oh, honest Christians,
11 do not covet the little vineyard of neighbors so far from
12 your shores. She was telling America, don't covet this
13 small territory out here in the Pacific; and I think
14 that's what has happened. And I think if we believe in
15 anything that is just, we have to try and change it and
16 bring it back to what is right.

17 Thank you.

18 MS. AMARAL: Jim Albertini, followed by
19 Chris Gaughen, followed by Jon Evans.

20 MR. JIM ALBERTINI: Aloha, everyone. My name is
21 Jim Albertini. I'm the president of a small non-profit
22 organization, Malu'Aina, Center for Non-Violent Education
23 and Action. And we have the material against the Stryker
24 on the table back there.

25 Tonight I'd like to focus on the flawed process

1 of the EIS. I'm from the Puna side, and tomorrow night
2 I'll try to testify on the substantive destructive nature
3 of the Stryker, but tonight on the process.

4 And let me preface my remarks and questions by
5 saying that I want written answers to my questions
6 provided directly to me by the Army and to be included in
7 the final draft of the EIS. At the scoping session, I
8 raised dozens of questions. Most of them were not
9 addressed at all in the -- in this Draft EIS.

10 Right from the beginning of the EIS, the process
11 has been flawed. Private, by invitation only, wining and
12 dining the politicians and business people at the
13 exclusion of the public; conducting tours of Pohakuloa
14 for political and business people, while cancelling, at
15 the last minute, a tour for Hawaiians, environmental and
16 grass roots community leaders; saying that certain
17 unnamed members of the delegation were unacceptable
18 because of their outspoken criticism of the military;
19 having exclusive, private country clubs and luxury hotels
20 as settings to intimidate and distance ordinary people
21 from participating in the process; using police and hotel
22 security as a military fence, to block and arrest
23 citizens from attending public hearings because they
24 peacefully carried protest signs. The banning of signs
25 as a peaceful expression of free speech testimony at the

1 first of six EIS public hearings tainted the entire
2 public hearing process, with a chilling effect on
3 expression.

4 Just yesterday I spoke at a University of Hawaii
5 class at UH Hilo, and scared University students asked
6 me, "Mr. Albertini, will we be arrested if we go to the
7 public hearings?"

8 Now, what kind of a climate have we created when
9 University of Hawaii students ask, "Will we be arrested
10 if we go to a public hearing?"

11 Just yesterday, a Hilo police captain called my
12 home and asked a member of my household if Mr. Albertini
13 was planning on being arrested at the Stryker hearings.

14 What kind of a message is that?

15 I have been informed by federal workers, several
16 I may add, that many federal workers are afraid to get
17 involved and speak out on the Stryker issue or even be
18 seen at public hearings like this. They fear that they
19 could lose their jobs just by being here.

20 What kind of a climate is that?

21 Hotel security left a message on my answering
22 machine that anyone carrying a protest sign should not
23 enter this hotel through the main lobby but go through
24 the loading dock.

25 What kind of an insult is that?

1 It reminds me of the blacks not being allowed
2 into restaurants to eat but having to go around to the
3 back kitchen door to eat. I left a message on the hotel
4 security message phone that such a request was insulting
5 and demeaning, and I would not be a party to it.

6 So what has the military accomplished by its
7 efforts to privatize public hearings and ban signs at
8 public hearings?

9 I have a few observations. The Army exposed and
10 demonstrated its contempt for dissent and trampled on the
11 very Constitution it has sworn to protect.

12 The Army exposed and demonstrated its complete
13 lack of understanding and respect for citizens'
14 Constitutional rights of peaceful expressions and the
15 right to assemble. Even the Governor told the military
16 that the hearings should have been at schools.

17 The Army provided unintentional publicity on
18 free speech issues and the Stryker EIS hearing. The Army
19 caused a chilling environment of fear in the community
20 for people to even attend these hearings. And the Army,
21 by banning silent, peaceful expression of protest signs,
22 provoked a climate for verbal protest and confrontation.
23 Through all of the above, the Army so significantly
24 tainted the environment for open public participation
25 that the entire process of public hearings on this EIS

1 should be redone during the now extended comment period.

2 The Army created what, in legal terms, is a
3 climate of duress, as evidenced by the University
4 students and others asking me, "Will we be arrested if we
5 go to the public hearings?"

6 Now, through all of the above and the public
7 hearings -- let me just add, the public hearings should
8 be held in public community centers or school facilities.
9 There were four hearings on Oahu. Oahu is smaller than
10 the Puna District on this island. There should be at
11 least five hearings on this island since we have the
12 largest land impact of this Stryker proposal. There
13 should be a hearing in Hilo, one in Kailua-Kona, one in
14 Waimea, one in Puna, one in Kahaluu, and if the people of
15 Hamakua also want hearings, so be it. Have more
16 hearings. After all, it's your job to listen to the
17 people who pay your salaries. That includes all the
18 people, not just your invited dinner guests who support
19 your pork barrel projects because they get to feed at the
20 trough.

21 The Hawaii Stryker proposal -- proposed budget
22 is 1.5 billion dollars. That's what it costs to run the
23 entire Hawaii Public Education System for two years. Ask
24 the people of Hawaii what they'd rather: A Stryker
25 Brigade or a doubling of the state school budget for the

1 next two years.

2 I have another question, but let me preface it.
3 Many people believe that the Hawaii Stryker Brigade is a
4 done deal, that these hearings are a fraud, a facade to
5 give the appearance of listening to the people when the
6 decision has already been made. Dan Inouye has said he's
7 been assured of the Stryker Brigade. He's already pushed
8 through Congress over 80 billion dollars in support of
9 the Hawaii Stryker, when the Draft Environmental Impact
10 Statement hasn't even been completed. To me, that's the
11 cart before the horse.

12 So here's my question: Why is it that the
13 military gets all the money and land at once and
14 Hawaiians die on a waiting list to get what is rightfully
15 their own homeland, much of which -- much of that land
16 which is being occupied and bombed by the U.S. military?

17 Now, I have a few quotes. Major Stacy Bathwick,
18 October 29th, Honolulu Star-Bulletin, the Army won't
19 allow any demonstration of protest involving banners or
20 signs carried into the meeting room. Colonel David
21 Anderson, who said banning signs was done out of concern
22 for potential damage to facilities, Sign carrying
23 protesters could be disorderly. Troy Griffin, U.S. Army,
24 who said that the protesters' agenda is to break up the
25 meeting. Let me say this to Major Bathwick, to Colonel

1 Anderson, to Troy Griffin: It's the Army's job to uphold
2 not suppress the Constitutional rights of citizens. You
3 should be more concerned about the damage and disorder
4 your Strykers will do to Hawaii and other places around
5 the world than what a simple protest sign will do by
6 coming into this room.

7 My agenda is not to break up anything. Breaking
8 up is what Strykers do. My agenda is to get you and the
9 U.S. military to clean up your opala on the more than 400
10 square miles on Hawaii Island, the equivalent of nine
11 Kaho'olawes, littered with a toxic stew of unexploded
12 ordnance, chemicals, and biological agents from current
13 and past military training. I say enough is enough.
14 It's time for cleanup, not buildup.

15 And the first step in cleanup is to properly
16 identify and caution people about the dangers of your
17 opala here on the land. Our small non-profit group,
18 Malu'Aina, is hereby donating to you the first of what I
19 hope will be thousands of signs made by you, the U.S.
20 Army, and placed around your present and former bombing
21 ranges and other hazardous military sites on our island.
22 The sign reads, "Caution, former military site. Live
23 arms hazard." By the Army making these signs and placing
24 them around their existing hazardous areas, it will be a
25 positive step forward after trying to ban signs from

1 these hearings. It's time to stop the Stryker invasion.

2 It's time to clean up. That's my agenda.

3 Aloha.

4 MS. AMARAL: Chris Gaughen, followed by

5 Jon Evans, followed by Rosie F.

6 MS. CHRIS GAUGHEN: Aloha. My name is

7 Chris Gaughen, and I would like to thank you for this

8 opportunity to speak to you.

9 And also to the audience, I've learned a lot

10 this evening. And I appreciate everybody, you know, what

11 you said, because I think we can all learn from each

12 other.

13 I'm pure haole, been here 30 years, but I'll

14 always be a haole. But I have a lot of love for the

15 aina. My son, his great-great-grandparents are buried on

16 Ali'i Drive in Kona. My concern is for him and the

17 future generations.

18 I live in Waikoloa, and I recently read that

19 Waikoloa now has 6,000 residents. And I wanted to speak

20 specifically about what's happening in Waikoloa, because

21 I think we can use it as an example and maybe help with

22 future planning. I would like the military, too, to

23 consider how to mitigate, in using Waikoloa as an

24 example.

25 Waikoloa is used (inaudible) for target

1 practice. Every time the ships would park offshore and
2 practice into Waikoloa, and now there's ordnance problems
3 left over from that. Our children cannot go out in the
4 fields, as (inaudible) in Waikoloa. We live near the end
5 of a dead-end street, and my son's not allowed to play at
6 the end of the street, past the cement, past the
7 concrete, because of the unexploded bombs that might be
8 there.

9 And we recently had a fire in Waikoloa, and my
10 husband and many of the other people that live there, we
11 were helping to put out the fire; and after the fire was
12 put out, lo and behold, there, ten feet from where these
13 men were standing, trying to help save our community,
14 they discovered a shell of a bomb that was as high as my
15 knee. Well, luckily that was something that was
16 previously exploded. But we don't know what's there that
17 hasn't been exploded. And when we realized the danger,
18 the potential danger, it was very upsetting to many of us
19 there.

20 So I think a problem that I see is, that
21 oftentimes now the military considers what its needs are
22 today but doesn't -- but the needs are different in the
23 future. And, so, it will abandon an area that was used
24 for one purpose and go on to a new area that's useful for
25 its current purpose -- that's what you're doing in the

1 PTA, is that they have a new eval, they need somewhere to
2 bring the Stryker equipment, and, so, they're going to go
3 into a new area. And I'm wondering what's going to
4 happen in 50 years when another new need comes up,
5 Stryker's old, they have a new weapon, they have new
6 needs.

7 Will they just leave PTA area, abandon it, and
8 leave it unusable?

9 From what I heard tonight, it's going to be
10 pretty well unusable because of the destruction of the
11 land itself.

12 The other thing that I would like to bring into
13 focus as far as mitigating is the tank trail that's going
14 to be from Kawaihae to PTA. I read over what I could of
15 the plans; and from I understand, it's going to go around
16 the border of Waikoloa -- and correct me if I'm wrong on
17 that -- in one area. And from what I can read, there's
18 going to be -- when that tank trail is used, there's
19 going to be approximately 100 vehicles per hour using
20 that tank rail. And I'm wondering about the dust
21 problem. Waikoloa is very windy. If you go out and work
22 in your garden, your neighbor's affected by that. I'm
23 wondering what these 100 vehicles per hour is going to
24 do. As you know, there are dusty days. So I would like
25 you to consider a path to mitigate that.

1 The third thing that I would like you to
2 consider, and I couldn't find in the plans, although it
3 might be there, is the aircraft noise. Currently when
4 they're training up at PTA, I'm assuming that they
5 shouldn't be doing it, but we often have low-flying
6 aircraft over our homes in Waikoloa, and sometimes the
7 planes will fly directly over. My son and I have
8 actually gone out and looked up to see, you know, what is
9 this, you know, who's landing here, and we looked up and
10 it's military planes. So at one time he started making a
11 log of it, and we're going to call somebody and complain;
12 but we didn't ever get to that point.

13 The helicopters have areas on both sides of
14 Waikoloa to fly over, and oftentimes they decide to go
15 right next to our village. And, so, that's something
16 else, I think, if you're -- if, for some reason, they
17 (inaudible) aren't able to get that expansion PTA, I
18 would like you to consider the aircraft noise; and seeing
19 how it is as a community, we could make complaints when
20 it happens, let people know they're in the wrong areas,
21 and keep our community as quiet as possible.

22 So, in summary, I would just like to say, that
23 as you make these plans, if you could please consider our
24 children. Maybe some day my own child might be in the
25 military or your children might be in the military. I

1 know you all would like them to be well trained if that
2 should happen. But, at the same time, I think that maybe
3 some day they would like to have families and homes of
4 their own. And I know that we would like them to have a
5 safe and healthy land to live on, and both of those
6 things need to be considered. So as you plan, if you
7 would please remember 50 years from now, not just what
8 the needs are today from your point of view, but what the
9 needs are for the future families.

10 Thank you.

11 MS. AMARAL: Jon Evans, followed by Rosie F.,
12 followed by Bobby Camara.

13 MR. JON EVANS: Good evening. Aloha.

14 Well, fortunately for all of you, a lot of what
15 I have been planning to say has been said, so I won't
16 repeat it. But just for reference purposes, Chapter 8 in
17 the EIS has an awful lot about soil destruction regarding
18 to what the other biologist guy said, engineer. Okay.
19 There's a lot of soil destruction, and the mitigation
20 that they propose in the EIS is reseeding; although, if
21 you look in the Executive Summary of the EIS, they admit
22 that so far none of that has worked. But because that
23 doesn't work, they have another strategy, and that is to
24 mitigate the problems of destroying the soil by
25 concentrating in one area only for a short while until

1 it's completely destroyed, and then they'll move on to
2 the next place, and then they'll reseed; but reseed
3 doesn't work yet. But, then, they're going to destroy
4 the next place before they move on to the next place. So
5 it seems like you need a little work on mitigation there
6 for soil destruction. Nothing personal.

7 While we were gathering information on the
8 formerly used defense sites in America, we stumbled on
9 something that I found absolutely amazing. In fact,
10 there's a fellow here tonight, Joe -- Joe Bonfiglio. He
11 works for the U.S. Army Corps of Engineers, Honolulu
12 District, which includes virtually the whole Pacific, and
13 they work on formerly used defense sites. And there are
14 50 of these sites on this island, for example; none of
15 them have been cleaned up yet. This extends back from
16 World War II and beyond, even before that for training.
17 None of them have been cleaned up, although there are
18 current contracts to clean them up. For example, the
19 Waikoloa Training Area, which is estimated to be costing
20 between 500 and 700 million to clean up, yeah, they're
21 working on it. The whole district, the Honolulu District
22 of his department, receives 10 to 15 million dollars a
23 year for cleanup. That's one project. I don't even know
24 the numbers. But you can see it's going to take an
25 awful, awful long time to clean up Waikoloa Training

1 Area. And that's if they spend all their money on
2 Waikoloa. But there are many, many, many sites,
3 including Kaho'olawe, of which only one-tenth has been
4 cleaned up, then they ran out of money; but they're
5 willing to give it back now that it's ruined and they
6 don't have money to clean it up. It seems as though the
7 military has taken a real casual attitude about their
8 need to clean up their own (Hawaiian word) when they
9 leave, yeah. They just leave 'em behind for you to step
10 in and live in, even if it's toxic for a thousand or five
11 thousand years.

12 Here's a quote that Braddah Joe was willing to
13 give us. I find it to be something that we should all
14 carry around in our hearts, okay, that they promising us
15 that at the current rate of cleanup -- I going use his
16 words -- it will be centuries before the District FUDS
17 work is completed, centuries. You know what that means?
18 They no care. They not (inaudible because of applause).
19 If I told you, Brah, give me a house; I going pay you,
20 you know, da kine, sometime, sometime. You going give me
21 the house? Hey, I going wreck your land. Hey, I sorry.
22 I going clean 'em. (Inaudible) Oh, the nice over there.
23 Not dead yet. I like kill 'em. I like destroy the soil
24 permanently. I like disregard the fact that it's an
25 acknowledged fact that Hawaii is the endangered species

1 capital of the world, that we are in the current phase of
2 a continuing destruction of the Hawaiian environment and
3 the Hawaiian people, just the current continuing phase,
4 no let up.

5 These are the people you need to hear, not these
6 guys. These guys make no decision. These guys make no
7 decisions about whether this happened. They probably
8 feel sorry already. They wish they wasn't in the Army
9 already. They feel so sad. But we need to know and we
10 need to tell our neighbors, the Army went promise us they
11 not gonna clean up, but they like some more. That's the
12 message; that's the message. And when they going clean
13 up, Oh, yeah, we're going to, we're going replant, but
14 the stuff no work, but we're going replant. I don't like
15 that too much.

16 I hope that can be interpreted well and somehow
17 used constructively in the next step of this process.

18 Aloha.

19 MS. AMARAL: Rosie F., followed by Bobby Camara,
20 followed by J. William Samborn.

21 Do we have Rosie?

22 MS. ROSIE F.: Yeah.

23 MS. AMARAL: Okay. Thank you.

24 Three Rosies here, four Rosies.

25 MS. ROSIE F.: We have a song to sing tonight to

1 bring us all together.

2 Don't bomb the mountain. Leave the mountain
3 alone. Don't bomb the mountain. The mountain is our
4 home. Don't bomb the mountain. The mountain is alive.
5 The mountain, the mountain will survive.

6 Don't bomb the mountain. Leave the mountain
7 alone. Don't bomb the mountain. The mountain is our
8 home. Don't bomb the mountain. The mountain is alive.
9 The moutain, the mountain will survive.

10 Don't bomb the mountain. Leave the mountain
11 alone. Don't bomb the mountain. The mountain is our
12 home. Don't bomb the mountain. The mountain is alive.
13 The mountain, the mountain will survive.

14 Don't bomb the mountain. Leave the mountain
15 alone. Don't bomb the mountain. The mountain is our
16 home. Don't bomb the mountain. The mountain is alive.
17 The mountain, the mountain will survive.

18 UNIDENTIFIED SPEAKER: This is, obviously, Rosie
19 (indicating). And I'd like to thank all three of you for
20 letting me sing with you.

21 MS. AMARAL: Bobby Camara, followed by J.
22 William Samborn, followed by Josephine Keliipio.

23 MR. BOBBY CAMARA: Mr. Borne, Colonel Anderson,
24 and Lieutenant Colonel Clarke. Good evening. And
25 members of the audience.

1 My name's Bobby Camara. I was born and raised
2 in Honokaa. I'm a fourth-generation resident of this
3 island. I'm not a Native Hawaiian, but I am, of course,
4 a native of Hawaii.

5 I worked at Hawaii Volcanoes National Park as a
6 federal employee for the last 22 years. I'm currently
7 not employed there but hope to get back there at some
8 point. Much of my time is spent in the Division of
9 Interpretation, as well as in Resources Management, where
10 I was the Cave Program Manager. So I have a lot of
11 expertise in cultural and natural resources management.

12 I was heartened to hear at the beginning that
13 the Army desires to make the EIS a better document. I
14 spent at least eight hours on Sunday going over the
15 biological and cultural sections of the report; and,
16 unfortunately, part of my life seems to be -- I'm a
17 magnet for errors of fact and typographical mistakes, and
18 I had to give up after about eight hours because there
19 were too many of them in the document. I think one of
20 the best things you could do at this point is hire an
21 editor. Seriously. This is not meant to be facetious.
22 It's really bothersome to read a document and to
23 continually find contradictions; and there are many,
24 many, many of them. I will be submitting written
25 testimony. I ended up with five pages of text and didn't

1 feel it was appropriate to read it all tonight, given the
2 time limitations.

3 Many of the speakers already have spoken about
4 contradictions in mitigation as well as contradictions in
5 just general information in the document. One of the
6 huge problems that I see as a natural and cultural
7 resources manager, and it puzzles me -- and I admit I
8 don't understand endangered species law very well -- but
9 in my reading of the document and looking at the tables,
10 the mitigation tables, it appears as though it doesn't
11 matter that there are at least ten endangered plant
12 species, federally listed endangered plant species,
13 growing on the property. All impacts of those species
14 seem to be mitigable to less than significant. And that
15 part I don't understand, and I'm hoping that will get
16 addressed in the Final EIS. I understand the practice of
17 growing plants in nurseries and then out-planting. I
18 also realize that Pohakuloa is extremely dry, conditions
19 are very, very harsh up there, and trying to replant,
20 especially endangered species, would present pretty large
21 problems. Anyway, that was -- that's one example.

22 I can talk for hours, and I promised not to do
23 that this evening.

24 While I recognize and appreciate the value of a
25 well-trained military force -- and I do, and I think many

1 of us in the audience do -- it seems that training in
2 this particular place, Pohakuloa Training Area, with
3 listed endangered plant and animal species, with a plant
4 new to science, recently discovered, consisting of four
5 populations of less than 400 individuals of
6 Tetramolopium, if any of you are botanists out there,
7 with numerous cultural sites, which include many shrines,
8 as well as lava tubes, which don't always announce
9 themselves, and with much of the area still unsurveyed --
10 so we don't know what's out there -- this place,
11 Pohakuloa, is simply the wrong place to practice. I
12 noted throughout the biological and cultural sections of
13 the report that there are many reports in progress which
14 deal with biology and culture, and it makes it very, very
15 difficult, for myself at least, to comment substantially
16 on impacts without having the information with which to
17 comment.

18 One little -- in closing, one thing I'd like to
19 point out about especially biology, the new plant that
20 was discovered is currently -- it's called an illegal
21 species. It has not been officially described by
22 scientists. It takes money to do that. The person
23 working on it doesn't have the funding to conduct the
24 research necessary to write a proper description of that
25 plant. So for all practical purposes, it doesn't yet

1 exist.

2 Additionally, from my work in caves in Hawaii
3 Volcanoes National Park and my knowledge of cave
4 ecosystems in general, I would fully expect that an
5 inventory of cave arthropods, which should be conducted
6 according to the information in the biology section, will
7 undoubtedly reveal new species of cave invertaverts.
8 They are there; they just haven't been found yet. The
9 problem is going to be, those cave invertaverts also need
10 to be described so they can also become legal species.
11 And even if they are legal, because they're not listed on
12 the endangered species list, they have no formal
13 protection other than the good will of people.

14 It really, really concerns me that the Stryker
15 vehicles, which apparently weigh an incredible amount,
16 are going to be rolling over areas which are very, very
17 fragile. And it's not just compacting the lava, as was
18 discussed earlier; it's breaking through the ceilings of
19 lava tubes. That, to me, is a huge, huge hazard up
20 there. There are stories of, you know, local
21 construction people -- I think in this resort, when this
22 was developed, or when the Hyatt was first built -- of
23 bulldozer operators, you know, ending up 20 feet below
24 the ground instantly when they crash through the ceiling
25 of a cave. It's very, very hazardous. Those ecosystems

1 are unique and should be protected.

2 I noted that the mitigation for cultural and
3 biological remains all note that we will try to avoid.
4 Trying to avoid is not quite enough. There needs to be a
5 mechanism where things that are rare and endangered can
6 be protected forever.

7 Thank you.

8 MS. AMARAL: J. William Samborn, followed by
9 Josephine Keliipio, followed by Kim -- looks like Spit.

10 MR. J. SAMBORN: Aloha.

11 Most of everything that I want to say has
12 already been said. And I think that the most important
13 thing I can say is, that I sit here being tugged from the
14 past because I have enough Hawaiian blood that it keeps
15 biting me in the back side, but I look haole and I act
16 haole; I was raised haole. And I learned an awful lot
17 tonight. And I don't know that I have a very clear
18 opinion of what's best for all of us. But what I do know
19 is that we can't live in the past. We have to at least
20 live in the present, and we have to think of the future.
21 And I think we need to have some healing go on in this
22 process. And I think we already know that the military
23 has a presence here. The military needs a presence here.
24 And the military is going to have to increase their
25 presence somewhere. And we are victims of the same

1 thing, no matter where we go in the country. Once we get
2 there, "Not in my backyard." And I think that we have an
3 opportunity right now, because I think that we have the
4 forum, to be able to express our opinions. And I think
5 and would trust that the military is willing to take into
6 account all of the things that were said today and
7 perhaps explore having some representatives from each
8 group sit down and have a conversation about how these
9 items would be mitigated.

10 I'm torn because I've seen an island devastated
11 by a hurricane, and that's the island of Kauai. I've
12 seen that the only people that can react to help the
13 people on the island was the military. They had the
14 equipment, they had the know-how, and they had the
15 ability to get in there immediately and help secure and
16 help the people of the island. So I think that we have
17 to accept the fact that we need the military.

18 I think we have to accept the fact that we need
19 to make sure that we are trustees of the land; and as
20 trustees, we can't just say, Well, let's just leave it
21 the way it is and somebody else will own it and not do
22 anything with it. That's not realistic in the present.

23 I think that our island would be better off with
24 a larger road coming from the east to the west. It
25 certainly would be safer. I think if we can participate

1 in some trade-offs, that we will all be able to get
2 something out of this that really helps us individually,
3 collectively, and as part of the family. And I would
4 encourage that we have some more one-on-one in consults
5 to be able to take the dust issue -- I mean, we all know
6 it exists now. We all know it's going to exist in a
7 bigger fashion. I think we need to discuss the noise
8 factor, not only from the aircraft but also from the
9 ordnance. And I think we have a tremendous opportunity
10 to say, you know, if you guys are going to be here and
11 you have the manpower, then maybe you need to step up the
12 process of cleaning up the stuff that was left by the
13 last round of military people that came through.

14 And I also think that if we want to go to a
15 broader scale, we have an opportunity right now to
16 recognize the Hawaiian Nation; and I think that that's
17 the federal government level. Why not take that
18 opportunity and see if there's some way to be able to
19 mitigate that at the same time. I think if you're going
20 to be here, you also have to realize that there is an
21 issue that needs to be settled.

22 Thank you.

23 MS. AMARAL: What we're going to do is take a
24 ten-minute break. It looks like we've got about eight
25 people left. Josephine Keliipio will be next, followed

1 by Kim Smit, I think -- Kim, you've got to tell me. And

2 then Abel Simeona. So let's take a break.

3 (Recess from 9:38 P.M. to 9:45 P.M.)

4 (Further proceedings were had on the following page.)

1 MS. LEE: I'm just going to take a couple of seconds
2 to thank you all for hanging in there and listening to a
3 diversity of opinions and views, and for those last eight
4 people for being very, very patient.

5 As soon as the folks in the back either grab a seat
6 or quiet down or take your conversation outside, we'll get
7 started. Josephine Keliipio.

8 MS. JOSEPHINE KELIIPPIO: Hi, Aloha. I'm Josephine
9 Keliipio originally from Hilo and living in Kona now as a
10 resident for 15 years, and I thank everybody that came up
11 for testimony. I learned a lot from all of you and --
12 because I didn't read the EIS yet, which -- which I want to
13 thank you for extending the 45 days because I'd like to
14 read it, and actually give more written comment.

15 But Jim Albertini -- I wanted to stress what Jim
16 Albertini said about having more meetings around the
17 island. I think that's the right thing to do. You're
18 looking at a 1500-page document, and a lot of us locals
19 ain't going to get through that document, okay? So -- I
20 mean, you really need to get out there and hear from them
21 and I think give some information to them so that they know
22 what you're up to.

23 So just by the testimony, I took a lot of notes and I
24 just wanted to just go over a few points. First of all, I
25 was pretty shocked at what Ms. Gaughen said about Waikoloa,

1 and that's pretty shameful that the military goes around
2 bombing different pieces of the islands and doesn't clean
3 up their mess.

4 Mr. Albertini has provided all of us in the back of
5 the room with a list of all of these military sites, and
6 what it looks like is -- I'm not sure if you guys have
7 listed these sites in your EIS, but if these were sites
8 that you used for your exercises, perhaps you guys need to
9 go back to these sites and make sure they're safe for us,
10 clean it up before you even attempt to desecrate another
11 piece of our island. That's shameful, and I don't
12 appreciate it as a native Hawaiian. So get rid -- get rid
13 of your mess, clean up a hundred percent of the mess that
14 you messed with these whole list of projects here, and then
15 come back with what else you want to do.

16 And I want to also -- I don't know if you guys are
17 aware, we just went through a war and our president lied to
18 us, and now the people that are actually benefiting from
19 this war, are these large corporations like Haliburton.
20 They're going in and making lots of money by putting Iraq
21 back together again.

22 So, when people say that, you know, this -- these
23 wars are good for us, it actually benefits large American
24 corporations all the time, okay? And those corporations
25 use people to fight for them so that they can get in there

1 and push the American way in those countries, and like it
2 or not, the American way of life ain't that hot, okay?
3 It's a very wasteful way of life. It's so wasteful that
4 our planet is suffering because of our wasteful way of
5 life.

6 And if you guys think that the military -- I think
7 I've read a few letters to the editor about what the
8 military does. It fights for our freedom. What kind of
9 freedom are we talking about? The freedom to keep driving
10 our cars and polluting the environment, and causing the
11 polar ice caps to melt. I don't know if you guys know
12 this, but there are some South Pacific Islands with people
13 on them that are sinking because all the water is coming
14 up, up, up, and some people have to move out, nations have
15 to move out. So, is that the kind of freedom that we're
16 talking about that the military is giving us, this fighting
17 for our freedom so that we can just go and violate the
18 Kyoto Protocol?

19 So, you know, I -- you know, I think we're being
20 brainwashed by the military, and we really need to read
21 more and find out what the military represents, the behind
22 the scenes stuff.

23 Another thing I want to emphasize is like Ms. Reeves
24 said earlier, don't touch the cultural sites. They're off
25 limits, and we don't appreciate it, you touching it.

1 Another thing is I wanted to know if you guys would
2 be willing to show the public a live demonstration of what
3 you guys are going to do with these large vehicles? I
4 mean, I really think that might be a real turn off to all
5 of us, a live demonstration. I mean, that's what I really
6 want to see, and I think a lot of us here really want to
7 see it.

8 I think that just about covers it, and thank you.

9 (Applause)

10 MS. LEE: Kim Smith. Is Kim here? Kim Smith.

11 (No response.)

12 MS. LEE: Abel.

13 (Blowing of the conch shell.)

14 MR. ABEL SIMEONA: O u'i ke'o 'ole ohana. Pu ai

15 Kapuna. U'i a ke, our guests over here. Aloha ohana.

16 Aloha ahiahi. Aloha kakou. Thank you, ohana.

17 My name's Abel. I'm speaking for my children, my
18 wife who has passed away. It's been five years now. My
19 wife died from breast cancer. She was from Canada. I have
20 my children in Canada now. It is because of what's going
21 on now over here on this island. This is why I took my
22 children out, because I'm one of them guys that stick fo'
23 the land, ua mau ke ea o ka aina i ka pono, only the land
24 is in righteousness. Not us.

25 I come over here fo' speak with my ohana. My tutu

1 man is Ikolalei. I come over here fo' speak for my mama,
2 and all my mama and brothers and sisters. My mama's name
3 is Vialoha. I come over here and speak for my great, great
4 grandfather, Kimo Keawe. I come over here and speak for my
5 ohana, Moku Keawe, the newly chief of Hawaii nei. There's
6 plenty more of us, that we love our land because that's
7 where we come from.

8 We come from mauka. From the po'o, from Mauna Kea,
9 Mauna Loa. That's our twin tower. The one in New York
10 only make blaze. That thing went down like a bird. This
11 is the real thing over here. And we have to malama our
12 mountain. My tutu man is Keole, and he was 96 years old
13 when he died. I lived with my tutu man. My tutu man told
14 me to malama the po'o. He told me, boy, you take care of
15 the mountain now. I said tutu, you talk about the po'o,
16 yes. Every day. Every day of his life before he went
17 home, and he tell me, you take care, you malama the po'o
18 now.

19 I used to think the po'o was Nuuanu, because my
20 grandfather wen build the old Pali Road. His name is
21 Ikeoli Simeona. My grandfather's name is Steve Montero
22 Keawe. In 1860 to 1890, he was in charge in the kingdom
23 time. He was the maika'i. He was the kahu. He was the
24 answer to problem, and he was the last guy that wen survey
25 the land during the kingdom time, father and son, and that

1 was grandfather. Both of them wen survey the land for
2 Hawaii. He was also the konohiki of the land for the
3 people.

4 And we must take care of this land of our birthright,
5 and we need everybody here. Everybody. I'm asking for the
6 children to go and write, and write one story, and tell
7 about their mountain, tell 'em what it means to you.
8 Because what it meant to me when my wife died five years
9 ago, I went to the mountain and I cried and I wen go dance
10 for my tutu because he never know what to do. As a single
11 father, I never know what to do.

12 Here I am 60 years old and don't know what to do, and
13 it seems like you guys know what to do. My son gonna ask
14 me, daddy, how come you never stop the guys from bombing
15 the mountain up there, our mountain? We are all to blame
16 if we're going to let this thing continue because it's not
17 pono, and it is not right. We must malama.

18 I'm not here to negotiate with the government. A'ole
19 na ko mea iki. Stop. We don't need all of this. We thank
20 you for all of you guys' kokua. I had uncles that they
21 died. I had my uncle when he -- when I was young, the
22 military came into my grandma house and said, tutu, they
23 give her the paper, and they told my grandma that the man,
24 maki, they no can find 'em. My tutu ripped up the paper
25 and hit the man and told him no, my son is still alive.

1 You guys get 'em. Five years later, he came home.

2 I was a small kid playing on the road. There was a
3 soldier walking down the road, that was my uncle. My uncle
4 David Simeona. Today he maki, and that was for the war.

5 Me, I was born a wartime baby. I was born polio. I
6 was taken away from my parents. I was one experiment for
7 the government. All the kids had polio, we was taken away
8 from our parents. This is during the wartime. And I was
9 raised in Shriner's Hospital.

10 You look at this island and you look at the people,
11 people come here. They are guaranteed -- people are
12 guaranteed to come here and there's sunshine, and they give
13 you lunch, and that you will not freeze to death. Why we
14 need all of this? You guys never go clean up all you guys'
15 stuff from back there.

16 There's many things that I like say to you people.
17 God is watching all of us here, of how we carry ourselves.
18 I like say something to the president and all the people
19 out there, all the little treaties we ask from the Kingdom
20 of Hawaii, you guys still never answer our letter from our
21 Queen, Liliu'okalani.

22 And I like add to something my brother wen say about
23 that letter. She talk about 'O honest American, 'O honest
24 Christian. 'O in Hawaiian means father, father of who?
25 Means lono. Lono means who? Jesus in Hawaiian. Jesus

1 would live here among us. That was Iono. Kealakekua means
2 the pathway to God.

3 There's a lot of things over here that take us to
4 this land that God created for us to malama, all of us.
5 Me, I'm Hawaiian/Chinese. I get little bit Japanese. I
6 get all of these different races, that when we marry, but
7 you know what, we all get one God. You guys got to think
8 back in history, and we need help from everybody. But no
9 going all the time, and people outside here, go and look
10 and all our schools should go write to our governor and
11 everybody else. That's what we need to clean up this act.

12 It's not only the haole. It's all the Armed services
13 here. Right now, who's going to be the targets? Us. For
14 who?

15 Thank you, but you know what, I like to talk some
16 more because I not pau yet, but thank you. Aloha.

17 (Applause)

18 (Blowing of the conch shell.)

19 MR. ABEL SIMEONA: He blow five times.

20 (Blowing of the conch shell.)

21 MR. ABEL SIMEONA: This is for the four corners of
22 the earth; north, south, east, west.

23 (Blowing of the conch shell.)

24 MR. ABEL SIMEONA: It's to let our ancestors know
25 that we still in touch with them.

1 (Blowing of the conch shell.)

2 MR. ABEL SIMEONA: And the fifth one is for ke Akua,
3 God is watching all of us.

4 (Blowing of the conch shell.)

5 MR. ABEL SIMEONA: Aloha, malama pono. Have a great
6 evening. Aloha.

7 (Applause)

8 MS. LEE: Next we have Mr. Jim Melvins, David
9 Schlesinger, and Mokihana. Mr. Melvins. I'm very sorry.
10 Medeiros.

11 MR. JIM MEDEIROS: First of all, mahalo ke Akua and
12 aloha kakou to all of you. I'm here to oppose -- in
13 opposition to the Stryker coming to Hawaii, to any military
14 expansion of any kind on all the islands, especially on
15 this island for, basically, all of the reasons that were
16 stated to you already. And the cleanup that you never do
17 everywhere, we got to live with.

18 We already the second generation, I think, if not
19 more, of the mess. My generation is part of the mess. As
20 you can see, tonight is for all of the struggles of our
21 community. You see how our people, the Hawaiian people,
22 struggling over here fo' communicate with you. You can see
23 some of us still oppressed and believe oppressed ways.

24 I stand before you unoppressed. I'm a kanaka maoli.
25 That means I'm pure Hawaiian because that's not our

1 Hawaiian word, Hawaiian. That was invented by you folks to
2 label us. So I am a kanaka maoli.

3 I got questions that I like ask. How much led is
4 there on the ground right now in Pohakuloa? How many tons
5 and tons of bullets went into the aina? One led at a time.
6 Truckloads after truckloads after truckloads. What is the
7 figure? Do you folks have that figure of how many tons and
8 tons of bullets and armor is in the aina? How can you be a
9 steward of anything with all of that in the aina?

10 Hawaii is the endangered capital. Even the Hawaiians
11 endangered. Everything, they endangered. Every site you
12 destroy is gone forever. It is our business. It is
13 totally our business. Why? Because we not oppressed. You
14 never beat me like you beat my parents. I'm talking to the
15 government, not to you individually and personally.

16 You beat my parents and my grandparents. Oppress
17 them to believe that no make trouble. That's none of their
18 business what you do. Everything you do is our business,
19 this kanaka maoli. Everything, all of the land you use, is
20 ceded land, kingdom land. You don't even pay rent as far
21 as I concerned. You're using our land everywhere and
22 you're not paying the kingdom nothing, so you are of no
23 value to us, to the kingdom.

24 How can you have any value to us? You don't give us
25 nothing. You take ceded lands. Our people no more land.

1 We live and die on the land that you get to use, bomb, fill
2 'em up with led, and you gonna do it again? You're asking
3 for more aina to desecrate, to fill 'em up with led, poison
4 'em, crush 'em, pollute 'em. Go train up on your own
5 continent, on the big continent.

6 You probably not doing it there because I tell you,
7 you wouldn't get away with it, because they will stop you
8 up there, too. Get more people fo' stop you up there than
9 down here. Why not you come over here where the people
10 still slightly oppressed? But like I said, I'm not
11 oppressed.

12 I was beaten in school. I was forced to do things
13 that is American. Hawaiian, we pledge allegiance to ke
14 Akua, not to flags, but I had to pledge allegiance to the
15 flag because of the oppression. My parents were beaten.
16 These things are serious for us as Hawaiians.

17 As you come into our generation now asking to acquire
18 more land for your training, we need your training. We
19 don't need your training because unless you're training to
20 attack our island, why you training in an island
21 environment?

22 Look at Micronesia, we got all the Micronesian people
23 coming to here because their place is so damaged from the
24 military. Their food system is so poisoned that they full
25 of diseases, and that's what's going to happen to our

1 children. We're next.

2 This place, like one of the guys said, is a good
3 place for you guys to come and have vacation, bring some
4 economy to this place, but no bring the bombs, no bring the
5 bullets, no put the led in the ground. Go train where you
6 gonna fight. If you gonna fight in the desert, go Arizona.
7 Go play over there. I mean, this no make sense for you
8 come desecrate our islands.

9 You just wen burn Makua Valley a few months ago. I
10 mean, when is it going to stop? This is not 1950, not
11 before that. We in 2003. We are different now. We're not
12 oppressed. It is our business, everything you do, and
13 that's how come everything is open. You know, I have so
14 much to say.

15 To this hotel right now, picketing, sign waving,
16 chanting, or any other public display of protest is not
17 allowed on any part of this premises of the hotel. Answer
18 me this, military, you guys in management of the hotel, are
19 you telling me that I cannot pray on these grounds, which
20 chanting is religious? I need an answer to that, okay?
21 Because I want to know if -- I feel like my religious
22 rights are violated by this paper right here.

23 You can talk about signs. You can talk about all of
24 these things, but when you tell me, as a Hawaiian, that I
25 cannot pray down here on this Hawaiian land, even right

1 here, right this minute, outside, I feel violated and I
2 need to find out the answers of these agencies are telling
3 me that I cannot do my religious practice when the spirit
4 calls me, when I'm outside there, when I come to this
5 meeting, I just need to know an answer to that.

6 You're not welcome to expand. We do not want you to
7 have any more land. We don't want you to bomb any more
8 land, disturb any more land, dig up even one more Hawaiian
9 burial. Enough sites have been destroyed at Pohakuloa and
10 everywhere else that you occupy. You need to clean it up.

11 This project is -- read the EIS -- put in your EIS
12 how much money you're going to put down now in bonding for
13 cleanup, what you plan to do. How many billions and
14 trillions of dollars going in the bank right now fo' clean
15 up the mess that you gonna do because you're gonna fill up
16 the aina with bullets, you're gonna shoot led into the
17 ground, and who knows what kind of chemical reaction that
18 all of this is gonna have on us.

19 Our island is so precious, and look at all these
20 people, Hawaiians and non-Hawaiians, is here today fo' tell
21 you this is wrong. Plenty of my family was in the
22 military, too; lived and died in the military, and that's
23 fine. You know, that's not a personal thing, but it's a
24 serious thing because our culture, you killing us like you
25 killing our enemy because you're killing our culture.

1 Whenever you destroy one site, whenever you destroy
2 20 acres or 20,000 acres, it's so important, our culture.
3 We, our generation, is here before you because we're not
4 oppressed, okay, and there's thousands everywhere. Because
5 we just like you, we're going to hold you accountable for
6 everything because we are accountable to our kids and
7 yours, too. All of yours.

8 When they live here in the next generation, we're
9 all -- how long you all plan to be here? Nobody going to
10 be here like hundreds of years, and that's for them
11 already. Everything is gonna be for the next generation.
12 And the military, no need over here expand. Clean up what
13 you get and give it back to the kingdom because that's
14 where it belongs. Thank you.

15 (Applause)

16 MS. LEE: We have four more speakers. David
17 Schlesinger, Mokihana, Keala Kahuanui, and Sharon
18 Kaufman-Diamond. Is David here?

19 MR. DAVID SCHLESINGER: Hi. You know, I went through
20 all kinds of feelings. I think that's what I'm going to
21 take you through first tonight.

22 Anger, at the intentions of the military to disregard
23 what's best for everybody. You guys dominate through fear
24 and violence. I don't respect that.

25 Happiness, seeing all these wonderful people coming

1 together in concern for our future. That's what
2 everybody's concerned about. We're all the same. We want
3 shelter for our families. We want food. We want to have a
4 good life. I'm a full-grown Makua, and a parent. I have a
5 three-year-old son, and my mom lives here. This is my
6 home. I don't want you guys here. I don't think you
7 belong here.

8 The next thing I'd like to address is the paper trail
9 is easy to find when you educate yourselves of what
10 happened over a hundred years ago. The marines came in.
11 They overthrew the queen. The English warships were off
12 shore and they were backing it up. The Hawaiian Kingdom
13 had treaties with over 20 countries. The paper trail is
14 there. It's very easy to follow, and it could be
15 corrected. I've been educated and I've educated myself.

16 I've lived here since I was 12, and I'm 28, and this
17 is home and I will fight for it. And the lines are very
18 drawn, you know. And like I said, it's very encouraging
19 seeing everybody here, and I think that's the best thing
20 that I see out of tonight, that everybody is coming
21 together and seeing that we have a concern for our future.
22 And I hope we continue to stand together because then they
23 can't really do anything. This is our home and it ain't
24 theirs. Aloha.

25 (Applause)

1 MS. LEE: Mokihaana.

2 MS. MOKIHANA: E ho mai. E ho mai. E ho mai E.

3 Attention. Awake to the call of our ancestors and remember
4 who you are. I want to say that it's wonderful to have the
5 glitz and the telecommunication, all the wonderful articles
6 that are out there about Stryker. Read 'em all. It's
7 heavy duty reading, and if it doesn't snow you and you can
8 come out from underneath, you can take your place as a
9 keiki o ka aina and you can say, I want to be heard. I
10 want to be counted, and with my last breath, I will not
11 stop and I will fight.

12 Because you know, why do you suppose Akua put us here
13 in the middle of the ocean? There are no other islands --
14 major islands around. None whatsoever, but you know what,
15 we are truly blessed, and so I say mahalo ke Akua, mahalo
16 Akua, e ke ala i ka aina, i ka ohana. All of your ohana,
17 my mo'opuna that speaks to me every day because, yeah, our
18 people and I don't say just Hawaiians. Everybody who feels
19 it, whether they carry the koko or not. We come from the
20 na'au. Do you come from the na'au? Then you need to feel
21 it down here and you need to reach out and it has to speak
22 to it so badly that you cannot even sit in your seat
23 anymore.

24 On that note, I want to tell you I am a mother. I
25 have four sons, and this is for them, and for all the

1 children that I have ever worked with or taught.

2 Number one, respect. When you come here, learn who
3 we are. Take off your slippers before you walk in. Remove
4 your shoes. Treat us as the way we would treat you.

5 Number one. I hope I can get through this, but if I don't,
6 please kokua, give me your mana, okay, little bit and then
7 I throw back to you afterwards.

8 From a very spiritually guided center for all of us,
9 that's where all of you, I feel it, it's coming from. A
10 lot of you five years ago wouldn't even walk in a place
11 like this, and you know what, I'm going to tell you right
12 now, no fear. I'm going to say that at the end, no fear.
13 Okay. Don't fear, okay?

14 This aina is so important. Why do you suppose they
15 finally decided that they wanted it after the Russians made
16 a bid for it, the French, the English? They finally
17 realized, oh, strategic place. And then, what, we got
18 bombed by Japan. Yeah, all that stuff coming out. To this
19 day, we still got oil leaking in Pearl Harbor. We still
20 got trash and elements of that war with us. So we have to
21 pay attention to what's happening to our aina because it
22 hasn't been cleaned up yet, okay? And it continues to
23 grow.

24 The military have now occupied 200,000 plus acres of
25 Hawaiian land, and you need to know that it continues to

1 grow. To what end? And I'll get there.

2 The second thing is aloha aina. It's a place of
3 spirit. It's a place of heart. Yeah. Our aina is like
4 our family. We don't treat it with disrespect, although,
5 some people will sell out to work for a corporation because
6 it's called divide and conquer, yeah. They pay the
7 Hawaiian to do the prayer. They pay the Hawaiian to throw
8 the Hawaiian salt and the tea leaf, and then on the side,
9 they make 35,000. Okay? And then the corporation puts a
10 wedge in, buys up the land, build the golf course, all that
11 pilau stuff going on around. This is an extension of that.
12 You have to know that. Okay?

13 So we look at that part of it. I want to know why
14 when Arizona has so much land, New Mexico, Area 51, all of
15 these lands that will be typically used to practice
16 military maneuvers, because some of those areas are very
17 similar to Iraq, Afghanistan. How come they want to come
18 all the way here and those places are almost 12,000 miles
19 away from here? I ask myself that all the time. Why?

20 We also know that the sacred sites continue to be
21 bombarded. So I encourage all of you to take a stand. Go
22 to a sacred site, do your prayers, give it to akua and ask
23 him to bring it back to you. Okay?

24 I feel sorry for these guys because they're put on
25 the spot. Somebody told them they need to come here and

1 stand up and face the music, and you know, unfortunately,
2 it's tough. It's a tough place to be.

3 Now, this is the next thing. I thought about this
4 long and hard. I came with no words prepared. I just
5 started making mental notes and Akua blessed me. He gave
6 me -- she said go for it. Okay.

7 Ha'imana'o. I have questions. I've been watching
8 and listening for a long time. I was a part of aloha na
9 pua. I still am. Don't buy that EIS, okay? They do a
10 really good, slick job of hiring somebody to put all the
11 pieces together, but you've got to read between the lines
12 because they'll send anthropologists, archaeologists. They
13 say we know the Hawaiians because they're like the Indians.
14 BS. They're not. So you need to pay attention. You need
15 to read and you need to question, okay?

16 Here's the other thing. Some of the possible uses,
17 okay, I don't know if it's true, I have been told, I have
18 heard, I have seen things, building of an air strip that's
19 probably going on now up there at Pohakuloa for 747s, okay?
20 Bigger planes to come in.

21 Second thing, impossible internment facility for
22 distant people. Third, electronic matrix and grid to
23 maintain and monitor all communications on this island,
24 okay, burial of military toxic waste, and this is a fact,
25 on Mauna Loa. Okay. This has already -- some of this

1 stuff has already happened. Pay attention. Read. Don't
2 even turn your backs.

3 Remember when the Navy was doing testing on the
4 whales off of Kona? You need to know what they were doing.
5 We were -- thank you. We're beginning to figure out what
6 all of a sudden in Kohala, we've got companies coming in
7 and these big Germans, they're blue-eyed blondes, you know,
8 coming over here, they want to hire construction companies,
9 and they're going to pull the puna, weapons, excuse me, and
10 on the other side, windmills are devices aimed, not at the
11 ocean, at the land. And who lives on the land? You and I.
12 Why? Ask the questions. Don't stop searching.

13 Okay. The last part. Things I have seen in Kohala,
14 and I'll do it really quick. Several weeks ago people,
15 families are staying out in Hokaliki. Sorry. Black
16 helicopters flying between ten and eleven o'clock at night
17 over Kamehameha's rest site, near that area, okay? People
18 out there, we don't know why, on a Saturday, three weeks
19 ago, our military people in unmarked civilian car doing
20 some kind of test, standing on the top of a vehicle, an SUV
21 putting a black -- yellow tape, I think, they were testing
22 what's in the air. Unmarked, yeah. Their fatigues would
23 blend in, no more kakis.

24 Little things like that. The kids were telling me
25 these things. They're hearing stuff. I said pay

1 attention. That's really important.

2 I want to say several other things, but I'll make it
3 brief. No matter what we're hearing or seeing, it's
4 important for all of us to be together, to stand together,
5 to look carefully, yeah, and then do what our ancestors are
6 calling us to do, because we got that paper on which my
7 ancestors signed their objection to being, you know,
8 American citizens. Maika'i. I was so proud when I saw
9 their name. I want to say that Hawaiians look to the
10 heavens. We listen to the wind, and there are many kinds
11 of wind that tells you what is for -- my sons have names.
12 They represent the kind of misty rain that fall on Kohala.
13 Why? Because I love them and I cherish what we have and I
14 don't want it to go away. The water is so important as a
15 life source for our plants, but mostly for us.

16 The fire from pele, she will speak. I know that.
17 The kai and the why, yeah. Maika'i aloha. Be proud of who
18 you are, whoever you are, no matter what your koko is, and
19 make sure that you have a voice in all of this. I really
20 appreciate the time. As my dad would say, no fear. No
21 scare. Go get 'em. Mahalo.

22 (Applause)

23 MS. LEE: Keala Kahuanui followed by Dr. Sharon
24 Kaufman-Diamond.

25 MS. KEALA KAHUANUI: Aloha e nau pua, e nau pua, e

1 nau Kapuna, e nau Alii O Hawaii, O Kohala loko, and aloha e
2 nau Kapuna. Aloha ne apu. Aloha nau Aloha. Aloha nau
3 opio. Aloha nau just the general public. Thank you for
4 representing yourself and being here. Thank you for
5 standing the heat and still being here. Grieving is a
6 process, so please bear with me, yeah?

7 I'm not a kumu. I'm not a teacher. I like to call
8 myself an experiential educator, yeah. It's just an
9 experience and we share. We share back. We learn from our
10 students. We learn from our aina. I don't have all of the
11 palapala or documents that you say I need to have for my
12 own aina to teach my own people. I don't have that, but I
13 have a whole lot of na'au. I don't know a whole lot of
14 things, but I do know this, my Kapuna, I only am what my
15 Kapuna tell me and that is kanaka maoli.

16 I no longer use Hawaiian because that's their slave
17 name given to me and you. So I'm kanaka maoli, because
18 that's what I've always been, so with that, they have
19 shared with you a lot of things that I really wanted to
20 share, but they said it much better than I could. I'm just
21 a young pup at this, but what I do know is that what we
22 teach our kids is four wise sayings.

23 Now, because you're in Hawaii I'd like to share it
24 with you and help remind our people because sometimes we
25 forget because we no -- no, I not oppressed like bruddah

1 said, but I'm sure there are ramifications of being
2 oppressed, okay, and I'm teaching kids who are left behind.
3 I'm a teacher who's been left behind, and this is four
4 things, okay? Please write them down.

5 Aloha kekahi kekahi. Easy. Love one another. We're
6 not talking about human beings that we can see. We're
7 talking about love one another, 'kay? That's plants.
8 That's animals. That's the unseen. That's the wind.
9 That's the mountains. That's our aina. Our papa, hanau
10 moku. That's everything, and I preach this and we teach
11 this to our kids every day, so they look at me, auntie,
12 aloha kekahi kekahi.

13 Okay. Number two. Kokua aku kopua ma'i. What we
14 gonna kokua? Each other. Again, it's not just the
15 physical. It's the unseen. It's the spiritual. It's the
16 land. It's the wind. I tell my kids, don't walk by the
17 tree and pull it's leaf. Can I pull your ear like that?
18 No. It's reciprocating, okay? I help you. You help me.
19 My aina have been taking care of me since long before I was
20 born so that I could be here and talk to you and you, okay?
21 So I take care of my aina, my aina take care of me. That's
22 how it works.

23 The next one is mahalo ike pena wa'a. Be thankful
24 for the things that you have. So I read an email to my
25 students that was given down the grapevine about this

1 hearings, and I said, kids, open up your school planners to
2 Page 11, and we have a world map, and we had a discussion
3 about 23,000 acres, Auntie? Auntie, look how small we are.
4 We can barely see ourselves on this world map, and look how
5 big they are. Why can't they go and practice on their own
6 soil? Look how simple. Out of the mouth of babes.

7 Okay. Next one, fourth one. Malama iko kuleana.
8 Simple. Okay. Kuleana is one big word that a lot of you
9 new to Hawaii don't understand. You think stewardship
10 equals kuleana, a'ole. You can say I'm a steward, and then
11 walk away and say, okay, I pau being a steward now.
12 Kuleana is you got no choice. A'ole ko'o.

13 That is your choice is to malama iko kuleana. You're
14 born with that. You have no choice to say, ah, maybe I'll
15 be out the hearing today. Maybe I'll malama Mauna Kea
16 today. We're not getting people -- as your Navy people
17 know, without Mauna Kea, how we gonna find home? That's
18 the first thing we see is Mauna Kea when we're on our
19 voyaging canoes. So, you're taking away our beam. Even
20 Batman had one sign he knew when to go or where to be.
21 Mauna Kea is our sign to come home.

22 Hawaiians -- kanaka maoli, excuse me. You know, you
23 have to get used to not saying Hawaiian, yeah, because it's
24 all over the place. Your slave name is all over the place,
25 so excuse me. Kanaka maoli, come home. Come home. Malama

1 iko kuleana, kokua ako kokua mai. Not only kanaka maoli,
2 all you folks who are kekei o'ka'aina. I might be a kalo
3 o'ka'aina because kalo is a native of this land, and you
4 might be an orange or a banana or you might be a lychee,
5 okay, we love you guys, too, but because you here, you have
6 a kuleana, to live by those four cardinal basic rules.

7 Okay. We don't have to talk about koko. We had --
8 we had what you call haoles that was right next to us.
9 Brother John Young and Isaac, they were right there. We
10 know we can bond. We can network, but you got to be down
11 with the four 'olelo na'au. Easy as that.

12 I have a story to tell you real quick. I'm getting
13 excited. I like this. Kawaihae Harbor is closed off. We
14 asked the DOT how come, they said Coast Guard. Coast Guard
15 mandated it. Now, that's na'au for us. That's where our
16 school occupied to use as a learning center, because as a
17 public charter school, you know, honors, so you just got to
18 malama e kua kuleana.

19 We have native plants that we planted over there.
20 That's aloha kekahi kekahi forces me to go over there and
21 malama it still. Just because you put up one big ol'
22 fence, but because of our school, this bruddah tell me,
23 sister, you guys one tenant of us. You can go.

24 Whatever. I go. You believe what you have to
25 believe. I go there and I water my plants and I bring my

1 aloha and bring ohana. I practice my right. Yeah? That's
2 what you got to do too.

3 So this day, September some day, we're about to leave
4 and this big ol' ship, you know that big ship with the
5 thing, the thing rolls up, it's -- they occupying, cramping
6 my culture, so we have to leave. So I leave, and I get to
7 the gate. I know the combination because I'm a tenant, so
8 I open up the thing, but before I get there, we pull up and
9 there's some red sporty car, look like he just came out of
10 Ali'i Drive, big black man with cut-off sleeves, cut-off
11 jeans.

12 He's all -- I'm on the inside. He's on the out. He
13 tells me, "You know, I know it doesn't look like I'm
14 authorized to be here, but I am." He pulls out his wallet,
15 shows me his identification with his mea on top. I make
16 like I cannot see. I won't let him choke and talk. So I'm
17 trying to practice aloha mana a nui, be quiet. Bruddah
18 busts it out and pulls it out for me and passes it through
19 the gate, and he says -- and I look at it like I cannot
20 read English, and I look at him and I look at him, and he
21 says, "You know, I've been here for four years and I
22 respect this joint."

23 Brah, we've been here generations upon generations,
24 and we respect this joint. So if you want to enter, you
25 must malama the aina. He says, "Yes. Yes, I will do

1 that." Okay. So I let him in. Behind my truck, my
2 vehicle I'm driving is one van full of GIs, and he talks to
3 them and they drive off. The GIs looked at me and we bowed
4 down, and all right.

5 You guys, on this day, I don't have a badge. Nobody
6 asked me, are you authorized to be here? What proof do you
7 have? How come you have the combination to be here? No.
8 But just your ano, just your practicing, my people, they
9 know who belong here.

10 I cannot tell you what to do, but your na'au going to
11 tell you what to do. Your ancestors going to tell you what
12 to do, and on that day, I hope I encouraged you, just keep
13 on practicing your Hawaiian, your kanaka maoliness, okay?
14 You keep on, and if you need help, your aina, brother's
15 aina, and puoho, you put a call to action, you be there.
16 Okay?

17 What you Kapuna tell you before leaving home? No
18 shame the family, right? 'kay? You not shaming the family
19 when you doing this kind of thing. They not turning over
20 in their grave. They all celebrating with you. Mahalo.

21 (Applause)

22 MS. LEE: And our last speaker is Dr. Sharon
23 Kaufman-Diamond.

24 DR. SHARON KAUFMAN-DIAMOND: Last speaker after so
25 many is not the greatest position. When I was 21 I had a

1 top secret clearance. I was a factorial in a major
2 military planning operation before I entered medical
3 school, and I got called a warmonger by some of my friends,
4 but I mentioned it because I really do believe in defense
5 and I believe it's important, but that it's very important
6 to do it right.

7 And there have been so many errors and ineptitudes
8 that have occurred in the way that the defense projects
9 have been done because I've paid some attention to that
10 ever since I was 21 that I cannot tell you how many
11 studies, injuries, toxic, damaged people, abuses of
12 people's rights have occurred when the military, many of
13 whom are quite well intentioned, but just don't have much
14 knowledge, and the action front about a lot of the issues
15 that they impinge upon leave their projects, do their
16 projects, and, in fact, help damage their version of the
17 military as well as others for life.

18 Now, we are in a particularly fragile environment
19 here. Hawaii is short of land. The lava tubes are just
20 the beginning of reasons why something as heavy as Stryker
21 vehicles should train somewhere else. We should be
22 minimizing things that will add to the already significant
23 pollution burden that the volcano offers here. Kids in
24 Kona, eight-year-old soccer team parents tell me,
25 50 percent of the team is on asthma meds. Not good.

1 Dr. Fred Holschuh has really tried to push for
2 research on lung difficulties in kids, much less older
3 people. Every little bit we add to what is already the
4 equivalent, what is it, 1583 power plants, I suppose that
5 depends on size of the plant and who's calculating, but
6 we're already impacted here. We don't need more toxic
7 dusts which contain lead, manganese [sic]. They're saying
8 they don't plan to bring depleted uranium in, but they
9 don't promise not to.

10 European union, Japan, other nations and groups of
11 nations are -- only one minute left? Seems to me that was
12 short -- are already banning depleted uranium weapons.
13 They tend to give up very fine particulates that get past
14 the lung defenses and get in there where you can't get them
15 out, as do many other toxic particulates from explosions
16 and set off disease processes. And with my one minute, I
17 can't give you the technicalities, but there are quite a
18 few.

19 This is not the place to put an expanded military
20 Stryker Brigade also, because we're currently in a position
21 where North Korea is trying to develop missiles which could
22 reach Hawaii, and the bigger the military installation that
23 we have, the more we are targeting ourselves for what is
24 really an insane egomaniacal government. We don't know
25 what they will do, but it's not paranoid to consider that

1 question.

2 I've also been a professor of planning at UCLA,
3 looking at and making original curriculum in how large
4 scale and small scale planning processes impact on the
5 mental community and physical health of people. When you
6 get a very large power center that people have to knuckle
7 under to and can get away with almost anything, as has been
8 the case of sugar here, you find in the sugar areas
9 possibly higher incidents of miscarriage, higher incidents
10 of kids with learning disabilities, studies that get
11 started and then get closed down.

12 We have acid rain. If you put more led, et cetera,
13 into the soil, the acid will help to sock it, and it will
14 eventually get into the lens below the island, which is our
15 only non-brackish water supply for much of the island. We
16 do have some other aquifers here and there. Not a good
17 idea to add to things that are going to damage that water
18 supply.

19 Oahu already has big problems on water supply. We
20 are the development -- excuse me, development frontier for
21 the expansion of population and the further constructed
22 developmental possibilities of Hawaii, but not if we ruin
23 it. My time is up.

24 (Applause.)

25 MS. AMARAL: I'd like to thank all of you for your

1 patience with us. Thank you for staying throughout this
2 gathering this evening. Two things I'd like to finish
3 with, one, of course, is to invite Colonel Anderson to make
4 some final remarks, and then to impose upon Papa Akau,
5 again, to lead us in a closing pule, if he would do so.

6 Colonel Anderson.

7 COLONEL ANDERSON: I just want to start off with a
8 thank you to everybody that's still here, but more
9 importantly, to everybody that has been here this evening,
10 I want to personally thank every one of you that were here
11 tonight.

12 All of your comments, written and oral, will be taken
13 into consideration when we continue our work on the final
14 Environmental Impact Statement. For those that weren't
15 able or so inclined to give oral testimony this evening,
16 we'll continue to accept written comments through the
17 public comment period that ends now on the 3rd of January
18 of next year. As was mentioned earlier, we did extend that
19 an additional 45 days because it is a complex document and
20 people need time to read it and understand it and digest it
21 and make comments on it.

22 Again, I want to thank everybody for their honest and
23 their heart-felt comments on the draft Environmental Impact
24 Statement. I want to particularly thank everybody for the
25 way in which they made their comments and the respect and

1 dignity that they gave to each other this evening. I
2 really, really appreciate that. I look forward to
3 continuing this process through the end of January, and
4 again, look forward to tomorrow night on the Hilo side.

5 Thank you very much for being here, and I'll turn it
6 back to Annelle. Thank you.

7 MS. AMARAL: Now, if I can call upon Papa to come and
8 give us our closing pule.

9 MR. WILLIAM AKAU: 'O ka nui, Father in Heaven, we
10 bring this meeting to a close this night. We are grateful,
11 Father, for Thy Spirit has been with us, especially the
12 military, sitting and listening to each of us express our
13 concerns. We're grateful, Heavenly Father, for being here,
14 for expressing ourselves, and we pray, Father, to bless us
15 as we travel to our place, Lord, this night, that we may
16 travel in peace and safety. And we thank you, Father, for
17 all blessings, and we do these things humbly in the name of
18 Thy beloved son, Jesus Christ. Amen.

19 MS. AMARAL: Mahalo. Thank you. Drive safely.
20 A hui hou.

21 (The proceedings were concluded at 10:50 p.m.)
22

1 WEDNESDAY, NOVEMBER 5, 2003; 6:08 P.M.

2 --o0o--

3 MS. KAHILI NORMAN: I'd like to express my
4 dissatisfaction with the Stryker Brigade, you know, being
5 employed (sic) to Hawaii; and that's regarding being
6 assigned to Makua on Oahu as well as Pohakuloa on the
7 island of Hawaii. That, to me, is an offensive act by
8 the military, United States of America, against
9 indigenous people of Hawaii -- that's the kanaka
10 maolis -- by desecrating more of their land, their aina,
11 with known, you know, historic -- significant historical
12 and cultural sites, burial sites, as well, on the island
13 of Oahu and on the Big Island. It is offensive to me to
14 hear that the military -- the Army, especially -- wants
15 to acquire more aina on the slopes of Mauna Kea -- that's
16 Pohakuloa -- in that way, close to Humu'ula and Waiki'i;
17 and that's, to me, an act of terrorism against the Native
18 Hawaiian people, kanaka maolis per se, the very action
19 that the United States is trying to defend their posture
20 in Iraq, against what they called terrorism and weapons
21 of mass destruction; and, yet, I find that they're doing
22 the very same thing to my aina, aina that we have so
23 little of.

24 In a few weeks, we're going to have Kaho'olawe
25 turned back to the state, to us, the Native Hawaiians.

1 And after all the years of bombing by the military here
2 on that aina of Kaho'olawe, it is still not clear of all
3 the active ordnance there on that island, that they went
4 ahead and desecrated and bombed and used as target
5 practice. They're going to leave this lands that they're
6 playing army with here, on my aina, dangerous to my
7 descendants, my grandchildren and my descendants to come
8 thereafter, that may want to hunt or walk on that aina;
9 but it will be unsafe, because the military, the Army,
10 felt it so right and pono to come here and play and
11 target practice and train for their people on my aina. I
12 asked them to -- to fight -- I would like to know why
13 they're not taking the Stryker Brigade into their own
14 backyard, where they come from; for instance, the Chief
15 of the Defense -- Secretary of Defense, where his home
16 land is. Where's his state? Why not taking the Stryker
17 Brigade and put it in their backyard? Or President
18 Bush's backyard? Or their coalition people that's
19 backing their posture there in Iraq? For instance, the
20 Philippines. They have a bigger place for them to go
21 play army with. They have terrains that are similar to
22 Iraq, to go take the Stryker Brigade and go and train
23 their Army personnel there on the Philippines. Why are
24 they doing it here? Or in Australia, another alliance of
25 the United States. Why not go there? Why not take the

1 Stryker Brigade there? Since it's so important for the
2 Army to feel like they need the training, to be able to
3 go there to Iraq and attack the people there and be
4 better trained to face the position there in Iraq, well,
5 go to these places that are backing them and feel it's so
6 right for them to be in Iraq. Go to the Philippines, go
7 to Australia, or go to their hometown. Whoever's here,
8 sitting on the board that is wanting to adamantly bring
9 the Stryker Brigade here should take a look and see if
10 they can go and take it back to their backyard.

11 So in wrapping up my comments here, I'm saying
12 that I do not want them here. Stryker, stay where you
13 are; do not come into our grounds. And if you need to
14 practice, you're not doing it in our backyard. Period.
15 And that's in the name of my ancestors and my future
16 descendants here, that I am adamantly against it.

17 ***

18 6:18 P.M.

19 --o0o--

20 MS. V. LEIHULU: Aloha. I'm V. Leihulu. I'm
21 from South Kona on the Big Island.

22 I want to say, that while a child growing up in
23 South Kona, I have watched military ships, planes bomb
24 South Kona. Was there any cleanup? What was the
25 results? Because a lot of us have terrible skin

1 problems. So it might have affected the food we eat from
2 the ocean, the waters we drink, and those chemicals may
3 be in the air. So I really feel that the military have a
4 responsibility to the people. Did they ever clean up
5 these areas? I'm talking South Kona. You know, they
6 bombed it. I watched them for years, while growing up,
7 bomb South Kona. No one ever came speaking to my parents
8 or my grandparents or the adults in that area. No one
9 ever came to help or give relief. And now I'm wondering
10 why the people in Molokai and Maui all had leprosy,
11 because Kaho'olawe is, like, right there. And all this
12 military chemicals/bombs may be the cause of all those
13 problems. It needs to be looked into, and I think we
14 need to be compensated as a people by the Federal
15 Government, the military; it's their responsibility.
16 Because they're doing it for the Micronesians. They
17 bombed them out, so now they're all over here. And they
18 know they were wrong, and they have to compensate them
19 and take care of them: Their well-being, their health,
20 yeah, their dispositions, their emotions, depression,
21 stress. This is what we're going through, the Hawaiian
22 people. There are post-stress or post-war syndrome
23 because they were bombing Hawaii. But nobody ever talked
24 of taking care of the Hawaiian people, you know. They
25 just come here and take and take and take, and we're

1 homeless.

2 Pohakuloa is Hawaiian Homelands. A lot of our
3 people are homeless here in our home. We need the lands
4 back to provide for our people, for homes, for
5 self-determination, to grow things for the family. Also,
6 our environments, our waters, you know, our ecosystems
7 are all being destroyed by things like this. And now
8 future developers, the developers now, also contribute to
9 it. But the military has a big hand in it, and they
10 should actually be here for the welfare of the people.

11 I don't see any country trying to attack us.
12 But by building, I feel that's when they going to start
13 attacking us because we have a military base here. And I
14 feel that the only reason why Japan attacked Pearl Harbor
15 is because there was a military base there. They're not
16 attacking Hawaiian people or Hawaii. They came because a
17 military base was here. So you put a military base on
18 Pohakuloa, Big Island, they will be coming to attack us.
19 I feel that, and I feel it's wrong. They should stop it
20 and go home and build it there in their own homes, not
21 here. Because all the waters around us is our main food
22 chain, and that will hurt all of us.

23 I want to express my feelings because I do plan
24 to have many, many, many grandchildren and
25 great-grandchildren down the line in the future. I would

1 like them to be safe. I would like protection,
2 perpetuation, and preservation of our culture,
3 traditions, and well-being as a people; the same thing.
4 And we are a major people, the nation of Hawaiian people.
5 We are endangered, and so are our resources here. We're
6 so far away from any large continent, that everything we
7 have, that akua has shared with us -- the air, the waters
8 we drink, the food line, food chain, the lands we live
9 on -- all should be protected, preserved, perpetuated;
10 because, if we don't, that's desecration.

11 So I feel no military base here, because that
12 will attract Iraq or other countries to disable us. And
13 nobody wants to attack us. We're a friendly people,
14 nation. We're nonviolent. We're not at war with anyone,
15 and we do not want anyone bringing that here to us,
16 because we really, strongly believe we are sacred and
17 akua have chosen us as a sacred place, Hawaii.

18 Thank you.

19 ***

20 6:26 P.M.

21 --o0o--

22 MS. SAMONE MICHAELS: My name is
23 Samone Michaels. And I'm new here to the island, but
24 most of my career was spent helping the military, as an
25 analyst, and I worked on highly classified programs; and,

1 so, one of the things I was privy to was all of the base
2 closures, especially in California, Nevada, and some
3 other states on the West Coast, that -- there's also some
4 active bases that have bombing ranges, and some of the
5 similar things that they're offering in this program
6 could be done at these bases.

7 One of the serious problems with creating a new
8 space for this kind of activity is the damage to the
9 environment. One of the things that we discovered in
10 trying to have a re-use program for the closed bases,
11 particularly in California, was that the contamination to
12 the land was such that no, you know, public school system
13 could be put there, no buildings would be approved by the
14 Food and Health Department. So one of the things that I
15 think that should be done is not to create a new space
16 but, rather, to take advantage of some of the spaces that
17 we have, particularly with the Army.

18 The other problem that I see here is that I also
19 worked on what was called the Chem Demil project, which
20 is Chemical Demilitarization Project. It's a 20
21 billion-dollar program, where we're cleaning up old Army
22 installations from the contaminants; and it includes
23 Johnston Atoll, which is part of the Northwest Hawaiian
24 Island chain. So at the same time we're having this
25 cleanup, 20 billion dollars' worth, we're just going and

1 dumping someplace else, literally. So I have some real
2 issues with that.

3 And since this is known for being pristine here,
4 this is an island that -- very much like the place that I
5 came from in the state of New Mexico, has the
6 Native-Americans, the Native Hawaiians, with the same
7 issues of not honoring sacred spaces. So that's what I
8 have to say.

9 Thank you very much.

10 ***

11 6:30 P.M.

12 --oOo--

13 MR. ROY CARVALHO: My statement is that Hawaii
14 cannot sustain any more of the U.S. military presence on
15 these islands. In fact, it has really gone too far. And
16 being part of the United States of America has already
17 damaged the islands of Hawaii for its -- for the people
18 and for the land and for all the creatures. The impact
19 made by the United States of America, with its control of
20 these islands over the last century, has already -- it
21 has already suffered too much from the impact of this
22 association. And it is now time for the people of Hawaii
23 to separate themselves from the United States of America.

24 ***

25 / / /

1 6:51 P.M.

2 --o0o--

3 MS. LOUISE WISECHILD: I want to oppose the
4 Stryker and the military expansion here on the Big Island
5 of Hawaii. I feel that it's not making us secure to have
6 it here; it increases Hawaii's chance of being a target
7 for other military actions; and that we don't need
8 terrorists to attack us if the United States military is
9 going to do it for them. And that -- what I mean by that
10 is to have suddenly an increased noise from artillery, to
11 have degradation of the soil and the water. Also, to
12 have a group of young military men, who are not the best
13 behaved people on the planet, who drink too much and
14 don't do well with women. Neither do women do well. So
15 I'm opposed to it.

16 The other thing I want to say is I can't believe
17 we're spending 1.3 million dollars for each one of those
18 vehicles that don't even get good mileage.

19 (More proceedings were had on the following page.)

2 -oOo-

3 MS. HANNAH REEVES: My name is Hannah

4 Wahinemaikaeo'kaahumanu Keliulanaueole'okalama Kane

5 Reeves. I born in Hawaii all my life. I'm pure Hawaiian,

6 and I am here to testimony -- to testify in the hearing.

7 My desire is to let the military know that there are
8 the thousands of heiaus there and iwi in old trail in the
9 pu'u, the caves, and also the -- and old trails, the caves
10 of the trail that goes around islands, and there were the
11 Pohakuloa is practicing, and my main goal is to save the
12 heiaus, and I have the numbers. I going to go look for the
13 numbers and the map, but I have the map.

14 And I -- this is five, I say, thousand, and my
15 concern is I have to protect old Hawaii and I want to make
16 sure that they're not running over or destroy all the
17 bones. And if there is anything that's in the way of the
18 highway, they move the highway. They cannot run over.

19 So what I wanted to let them know that, don't do that
20 because I really want to stop, and I want to stop these.
21 There's something that -- you know what I mean -- right on
22 the road. They going to be along the way of Kawaihae and
23 Ho'olulu, Kaumana, and also Pohakuloa and also Mauna Kea
24 and Mauna Loa.

25 I just don't know how to explain it, but I get all my

1 papers together and I will come to Hilo and give you all
2 the information of what I know. And I'm claiming that
3 every road of Pohakuloa is -- because that land belonged to
4 my ancestors, and it is the land of kealoha, and I'm
5 really -- I'm -- in my genealogy go back way far. Lilinoe,
6 you know the mountain Mauna Kea, that's Lilinoe. I come
7 from that land.

8 And you know, I feel so sad because you know why?
9 These people, they don't realize that they're going to be
10 destroying a lot. They think that by putting the road in,
11 we're going to have -- the community are going to help
12 them. I don't think. I don't think that is what they
13 doing, because in my mind, I know they already decide what
14 they want to do. They always doing things way before the
15 public know, way before the community know, and I -- from
16 what I gathered, they said that the two years they were
17 here doing all that, they way ahead. They're not telling
18 us nothing. And I'm really concerned about that.

19 And I want to -- I talked to Mr. Clarke about it. I
20 wanting to let Mr. Clarke know that how much -- how much is
21 on the property. And then many years ago, over a hundred
22 years, the military -- I don't know how they got it, but in
23 1930, they took over the land and our ancestors owned that
24 property way before white man came. And the big five, you
25 know who the big five is? They the one who want to steal,

1 and they still stealing today and they think that that's
2 their land, but it's not. It's not their land. I can
3 prove it it's not their land, but I'm saying now I want to
4 protect all the heiaus and the water because the water in
5 the mountains are the water in the beach. I want to
6 protect all that, all the trails, all the mountain, all the
7 pu'u because the mountain high and pu'u low, and my main
8 goal is also the infant of our people.

9 The plants, there's a lot plants that they're going
10 to be running over that they destroy. They're going to
11 take part of the forest and that is destroying old Hawaii.
12 They also going to be taking -- they going to be taking a
13 lot on the highway because they need to widen the road to
14 make it wide, you know, for the trucks and everything is
15 going to go back and forth.

16 What is the government -- what is the Army going to
17 give back to our people, especially the ones that hold the
18 property way before? What they going to do about that? Do
19 you know that they paying only dollar a year? That's all
20 they're paying. They're not paying like how we pay tax,
21 high tax.

22 Now, what makes them better than we are? I say they
23 are foreigners, and I live in Hawaii all my life for
24 generations. Now, what is it that when you do something
25 wrong, when you steal, or when you destroy, then you go to

1 jail. Well, when they destroy our ancestors on the land,
2 did nobody do anything to them? Did they pay for the
3 damages? No. They never did. They still going to be
4 damaging a lot.

5 But I talked to the Commander two years ago, and he
6 was supposed to take me on the site and he never. So I'm
7 saying to Mr. Clarke, what happened to the Commander? I
8 don't know what happened, but he -- I didn't go on the
9 property. He's saying that he want me to look at the
10 property and see if there's any heiaus or whatsoever, they
11 never showed up. So I'm telling Mr. Clarke, what happened?
12 If two years ago your Commander came here, what happened?

13 Oh, I'll get a hold of him and sit down and talk to
14 you, but I said, I don't know, man. You better take me on
15 the site. I demand you take me where my ancestors' land.
16 And I want Mr. Clarke to go back to his Commander. I
17 demand that I see the land of my ancestors immediately.

18 (The testimony was concluded at 9:40 p.m.)

1 P R O C E E D I N G S

2 MR. CHANG: Welcome, everyone. Aloha kakou.

3 Thank you very much for joining us this evening.

4 I'm Lou Chang. I'm one of the three
5 facilitators who will be helping at this session.

6 Can we start with the pule. I understand that
7 representatives from the Royal Order of Kamehameha will
8 do a pule.

9 MR. ALIHIKAUA KANAELE: Aloha.

10 Before we start, I'd like to call up Cousin Abel
11 to come up, please. We going start with a short aloha
12 'ole, you know, just to, you know, get the spirit of
13 aloha, you know, the spirit of aloha aina moving around a
14 little.

15 (Pule.)

16 MR. ALIHIKAUA KANAELE: On behalf of (Hawaiian),
17 we welcome you to our moku on this side of the island;
18 and he extends his greetings. And also to our people
19 that have aloha aina, that, you know, bring that spirit
20 to our commanders here of the Armed Forces, although we
21 occupied. But, you know, we gotta extend that good aloha
22 and show that love that we have for the land here, aloha
23 aina. No forget, yeah.

24 (Speaking in Hawaiian.)

25 Here we are with all our people, and the Army

1 here. We have to -- we ask you to bless us and guide us
2 in a good way and let us be eloquent, that we can show
3 that our love of our aina is paramount in our minds and
4 that's what we care about, and that we know that the land
5 and the people are one; and as you destroy, make funny
6 kind to the land, that the people get funny kind. So
7 that's why we need blessings and protection upon our
8 people here, that you don't succumb to this moving of
9 Armed Forces here, so that we don't get in a bad way. We
10 ask you to really, you know, give that aloha and that
11 protection for all of us.

12 (Speaking in Hawaiian.)

13 Bless the children, protect, defend.

14 (Speaking in Hawaiian.)

15 The children of this land, from the youngest to
16 the oldest, we're still the children of this earth. So
17 we kokua (Hawaiian) Tutu Pele, our fire goddess from the
18 middle of the earth, that we (inaudible), make us all
19 related here in the universe.

20 (Speaking in Hawaiian.)

21 Listen to our prayers; listen to our spirit;
22 listen to our love.

23 So with all those good thoughts, we ask that
24 (Hawaiian). Forever and forever be with us.

25 Aloha.

1 MR. CHANG: Mahalo.

2 May I introduce first Colonel David Anderson and
3 ask if Colonel would like to give some introductory
4 comments.

5 COLONEL ANDERSON: Aloha, and good evening.

6 I'm Colonel Dave Anderson, Garrison Commander
7 for U.S. Army Hawaii.

8 Thank you very much for that opening pule. We
9 really appreciate it.

10 On behalf of Major General Eric Olson, the
11 Commanding General of the 25th Infantry Division in U.S.
12 Army Hawaii, I'd like to welcome you to tonight's
13 community meeting on a Draft Environmental Impact
14 Statement for the transformation of the 2nd Brigade of
15 the 25th Infantry Division to a Stryker Brigade Combat
16 Team.

17 Tonight we're here to listen to your concerns,
18 gather your comments on our Draft Environmental Impact
19 Statement. Facilitators, who you've briefly met, will
20 help us facilitate this and coordinate tonight's meeting
21 and provide an effective system of gathering your input.
22 Your role is to provide additional input on our
23 environmental, cultural, or any other concerns you
24 believe should be addressed and analyzed in the Final
25 Environmental Impact Statement. That's why we do these

1 meetings, is to gather the public's comments on our Draft
2 Environmental Impact Statement so that we can further
3 refine that, and that the Final Environmental Impact
4 Statement can be used, it can be better thought out, and
5 it can be used to make the final decision as to whether
6 or not a Stryker Brigade is transformed here in Hawaii.

7 The Environmental Impact Statement is the most
8 comprehensive document that can be prepared under the
9 National Environmental Policy Act.

10 And I know that everyone's anxious for us to
11 begin; so, without further delay, let me turn it back
12 over to our facilitator.

13 Thank you very much for being here tonight.

14 MR. CHANG: Thank you, Colonel Anderson.

15 Let me introduce you to the rest of the panel
16 who will be receiving your testimony tonight, and also
17 discuss the arrangements that are -- have been made.

18 Also at the table, on your right, is Lieutenant
19 Colonel Fred Clarke. He is the commander for the
20 Pohakuloa Training Area. And on your left is Ron Borne,
21 who is the Manager -- Transformation Manager and
22 responsible to see to the accomplishment of the program
23 if and as it's approved.

24 Okay. As Colonel Anderson indicated, this is
25 the time for you to give your testimony to the panel. It

1 is going to be recorded in a number of ways. We not only
2 have a court reporter, who will be preparing an official
3 transcript that will be available for the public to
4 review; we also have a video record of these hearings.

5 There are numerous ways for you to provide your
6 testimony. Speaking at the podium tonight is one of
7 them. We also have a second court reporter, who is in
8 the corner as you entered the room, behind the plants,
9 for people who wish to give their testimony either
10 because they do not want to give it publicly at the
11 podium or because they can't stay the entire evening or
12 for whatever reason prefer to give their testimony on the
13 record, in private. So if at any time you wish to do
14 that, you're more than welcome to do that. The court
15 reporter is available, will be available throughout the
16 evening.

17 You also have the opportunities to provide
18 testimony in other ways.

19 Yes?

20 UNIDENTIFIED SPEAKER: I'd like to ask a
21 question before you go any further.

22 MR. CHANG: What's the question?

23 UNIDENTIFIED SPEAKER: My question is, how much
24 are these meetings going to influence the decision for
25 the Pohakuloa expansion?

1 COLONEL ANDERSON: Thanks for that question.

2 The Environmental Impact Statement process, or
3 the NEPA process, now we're basically in the middle of
4 that. And, so, your comments tonight will influence the
5 quality of the Final Environmental Impact Statement,
6 which is then presented to officials that will make the
7 decision as to whether or not to bring a Stryker Brigade.
8 So your comments are very important, and the inclusion of
9 those in a Draft Environmental -- or in a Final
10 Environmental Impact Statement and how we address those
11 are important to the process.

12 UNIDENTIFIED SPEAKER: My other question is, who
13 makes the decision for the final yes or no on the
14 Pohakuloa expansion?

15 COLONEL ANDERSON: The final decision -- let me
16 answer that in two ways -- on whether or not the Stryker
17 Brigade comes to Hawaii will be made by the Secretary of
18 Defense at some point in time.

19 As to whether or not the expansion of Pohakuloa
20 is included -- if the decision is yes, we're going to
21 build the Stryker. There is the potential that the
22 decision can be yes or no on the expansion of Pohakuloa;
23 and that's part of this Environmental Impact Statement.
24 If the impact is so great on the environment that it
25 cannot be overcome, then there's a potential that we

1 would not acquire that. That's why we're doing this
2 process, is to get all that out in the open and determine
3 what the impacts are and then what can be done to reduce
4 or eliminate those impacts.

5 UNIDENTIFIED SPEAKER: But you haven't answered
6 the question.

7 Who makes the final decision?

8 COLONEL ANDERSON: Donald Rumsfeld.

9 UNIDENTIFIED SPEAKER: Is he the only one?

10 MS. AMARAL: I think, Colonel, people that are
11 outside cannot hear the questions because she's off mic.
12 So if this is going to continue, someone has to repeat
13 the questions.

14 MR. CHANG: Okay. Let me finish the ground
15 rules, if I may.

16 As I mentioned, the various ways you can submit
17 testimony -- it was a good question raised about how
18 important are these comments. Your comments are
19 important. There are -- that's why all of these ways are
20 being provided for you to provide them.

21 In addition to the ways I mentioned earlier, you
22 also can submit them in writing. And you can send them
23 in by fax; you can send them in by e-mail. There's a
24 card of the representative from the Corps of Engineers
25 out at the table that has an e-mail address if you wish

1 to submit it that way, fax number, virtually any way you
2 can get your testimony. What's important to be said by
3 you said can be accommodated.

4 As an indication of responsiveness to some of
5 the earlier comments that have been made, a decision has
6 already been made, because of the numerous requests made
7 during the hearings elsewhere in the state like this
8 meeting, that a decision has been made to extend the
9 comment period. So the comment period is now extended to
10 January 3, 2004. So we encourage you to submit your
11 comments. We encourage you to present your testimony
12 tonight. If it's important in your mind, in your heart,
13 we hope you will speak it. And our job as facilitators
14 is to help you say what you want to have said.

15 Tonight we also will -- can accommodate the
16 translation of Hawaiian language testimony.

17 At this point, I'd like to invite our Hawaiian
18 language assistant, Noelani Arista, to explain the
19 process in Hawaiian, and perhaps in English.

20 MS. ARISTA: Aloha mai kakou.

21 (Speaking in Hawaiian.)

22 I'm here as an assistant for those who wish to
23 speak or give their testimony in Hawaiian only. If you
24 give your testimony in Hawaiian, you have the option of,
25 of course, translating your testimony for yourself, for

1 the audience. You might choose to speak only in Hawaiian
2 and leave your comment untranslated, in which case the
3 testimony will be translated later on from the
4 transcripts.

5 Finally, if you choose to ask me to assist, you
6 can come up here and give your ha'i olelo, and I can come
7 and translate, help you translate. But if you choose to
8 do that, let's get together before so we can discuss how
9 that's going to come about.

10 Mahalo.

11 MR. CHANG: Mahalo.

12 At this point, I'd like to introduce my
13 colleagues, the other facilitators that will be here,
14 helping tonight.

15 Miki Lee is here in front. Annelle Amaral.

16 Please feel free to come up to any one of us at
17 any time if you have any suggestions, if something is not
18 working for you, talk to us, and we'll do what we can to
19 help make the meeting work for everyone.

20 We will need to take breaks every now and again.
21 The court reporters that we have are rotating and, so,
22 they will take shifts; so we'll take breaks sometimes for
23 that reason. The videotape needs to be changed every now
24 and again; we'll take breaks for that. And then, also,
25 we'll take rest breaks, lomilomi breaks, just every so

1 often because, you know, this -- we expect to be here
2 till 10:00, maybe later, just so that we can receive all
3 testimony. So just to prepare you for that. And feel
4 free to get up and -- if you need to take a stretch or
5 rest room and stuff.

6 Also, there's seats up -- interspersed here and
7 there. Some of you who are standing, if you'd like to --
8 please feel free to come on up and grab a seat so you can
9 be comfortable.

10 All right. Thank you very much for this
11 wonderful turnout. It's very apparent that many in the
12 community have much they want to say and much that is
13 important in their heart and in their minds. Can I ask
14 for all of us to show them consideration and courtesy as
15 they give their testimony. We may not all agree, but it
16 is very important that we all have a chance to say what
17 is important. So I ask your help in that throughout the
18 evening.

19 There are some ground rules, I guess. Our job
20 as facilitators is to help you have a productive
21 discussion; and, as part of that, we were thinking of
22 some ground rules to help us have a good meeting and a
23 good discussion.

24 The first one, of course, is courtesy and
25 respect for each other. I touched upon that, and I ask

1 your help with that.

2 The second is to show your best. As you're
3 giving your testimony, we ask that you refrain from such
4 things as using swear words and stuff and hope that you
5 can find that that's not necessary to do that as you
6 present what's important.

7 If you need to talk, out of courtesy to the
8 group that is in here, again, please feel free. You're
9 welcome to step outside, enjoy the hopefully clear sky,
10 moonlit sky tonight, and talk outside.

11 I was also asked to mention that if you need to
12 take a smoke break, because of the requirement that
13 smoking is outside that you do it outside; but, also, if
14 you would step away from the doors. That would be
15 appreciated.

16 And, as a reminder, if you have cell phones,
17 would you please turn them to either silent or discreet.
18 That would be appreciated, too.

19 Those of you who have brought signs, there was a
20 table to show your materials. You're also welcome to
21 hold them at the back of the room if you so desire. But
22 we ask that you keep the aisles free so that people can
23 come and move around the room and come up to speak and
24 the like.

25 We are asking people to try to keep their

1 comments to five minutes. And we will try -- in order to
2 keep the pace and progress of the meeting going, at the
3 end of about four minutes or so we'll try to give the
4 speaker a little reminder card, just to help people know
5 the situation with the time.

6 As facilitators, it's also our responsibility to
7 maintain the proper -- a proper atmosphere for our
8 discussions; and, so, I guess we have, ultimately, the
9 call to call a recess if things are not going well and
10 maybe even to call off the meeting if it's not going
11 well, if there's a major disturbance. I don't think
12 we're going to have that situation in Hilo. And I ask
13 your understanding and cooperation with that, as well.

14 So, again, our main purpose here is to have a
15 neutral, safe environment for people to say what is
16 important to be said, and we want you to have a fair
17 chance to do that; and with everyone's kokua and
18 consideration, we will. So I thank you for any
19 assistance and understanding you can give us.

20 One thing to tell you about the facilities
21 tonight: We were told that the air conditioning broke
22 down today, and there's nothing they can do other than to
23 bring in the two fans that we have here. We have them on
24 low, because if we turn them on high it gets really loud.
25 But if it gets really uncomfortable, please let one of

1 the facilitators know. Again, maybe we'll have to take
2 more frequent breaks or something so you can go outside
3 and stuff. But I'm going to have to ask your forbearance
4 on that. That's what we have to work with for tonight.

5 So, with your cooperation, we are looking
6 forward to a productive discussion.

7 And, again, thank you all for your interest and
8 your attendance.

9 UNIDENTIFIED SPEAKER: How many people are
10 signed up to speak?

11 MR. CHANG: A question was asked of how many
12 people were signed up to speak.

13 When I checked some minutes ago, it was around
14 40; but it's probably more than that now. And the
15 meetings have been going to -- you know, depending --
16 1:30, 10:30, 11:00 o'clock last night. So we have a lot
17 to do. So we're going to try, as facilitators, to keep
18 the thing going.

19 Thank you.

20 The first speaker is Abel Simeona.

21 We will try to give the names of two or three of
22 the speakers so that you can know that you're coming up
23 and have, you know, a few minutes before to gather your
24 thoughts.

25 After Mr. Simeona will be Calvin Kaleiwhewa,

1 and then followed by Kanak.

2 Mr. Simeona?

3 MR. ABEL SIMEONA: Aloha kakou. Aloha kupuna.
4 Aloha makua. Aloha 'opio. Aloha keiki o ka aina. Aloha
5 to our ohana over here.

6 First of all, mahalo ke akua. And I'm glad to
7 be here, and I'm glad that I see a lot of our ohana over
8 here. Now is our time to go and talk about why we here.

9 And I'm against the military on our lands. It's
10 because they still didn't deal with the problem; and the
11 problem is with us, the people of this land, and it's us,
12 the kanaka maoli.

13 I'm not an American citizenship. I don't claim
14 to be one. Don't want to be one. I don't belong to OHA
15 or (inaudible) or any organization. I belong to ke akua;
16 I belong to God. And I'm only here to speak in there for
17 my ohana. I have three children, and that's why I'm
18 here, to speak for them and to speak for my kupunas. I'm
19 from Ka'u, and I'm speaking for the ones that don't talk.

20 We've been here. And the military -- I remember
21 when I was a young kid and they was teaching us about
22 George Washington, about him chopping down the cherry
23 tree. And I wen' raise my hand. I said, "Yeah,
24 teacher."

25 And he said, "Yes, Abel?"

1 I said, "This guy George Washington that
2 chopping down the cherry tree, what he got to do with us?
3 Please tell us about our king and queen."

4 And you know what they wen' do to me? They said
5 one word, "insubordination", and they wen' grab me, and
6 they took me to the janitor; and they told the janitor,
7 "Put him to work."

8 And then, when the teacher left, "Boy, what you
9 wen' do?"

10 I said, "Oh, the teacher was talking about the
11 guy George Washington chopping down the cherry tree, and
12 I wen' go ask 'em about our king and queen, and then she
13 said 'insubordination.' What that, aho?" Oh, he wen'
14 come and cover up my mouth, and he looking for the
15 teacher, see where the teacher stay.

16 I just wen' find out this about what it means,
17 insubordination, only a year ago. You know what it
18 means? It means refusing to take an order. And that
19 order came from the military. And I was eight years old.
20 And they're still here, giving orders. And I think the
21 gig is up. I don't think; I know the gig is up. Get a
22 lot of people got a lot of things to say over here. And
23 I'm glad the mothers are here, because they are the
24 backbone and the foundation of Hawaii Nei. It's not the
25 kane. It's all of us to make all of this thing happen.

1 And the children take a big part in all of this, because
2 one day they're gonna ask you, What happened to the
3 mountain? What happened to our land? Tutu kane, tutu
4 wahine, that's our sacred land, sacred mountain. There's
5 many things that we go up there for. We go up there to
6 pray, to give thanks to God, and to help us that we can
7 carry on this -- things that we need to know. And it's
8 for the future and it's for all of us to malama the land
9 and the people, because they come together.

10 And you guys know that word you guys -- you know
11 that thing you call Pohakuloa? You guys know what that
12 means? Pohakuloa? By and by somebody else goin' come up
13 here and tell you the translation, one of the Hawaiians.
14 But you guys better know a lot of things about Hawaii,
15 because it is sacred, and it comes with us.

16 I'm a kupuna now. I'm 60-something years old.
17 I'm always referred to the boy, that you go out there and
18 you go gather up the information and take back to our
19 kupunas.

20 I'm glad that you folks are here. I love you
21 guys, and thank you. (Speaking in Hawaiian.) Go get
22 'em, gang.

23 Aloha.

24 MR. CHANG: Mahalo.

25 Okay. To give you a little more information, we

1 are now at 70 people who wish to testify. So we will --
2 we will hear it all. Seven-zero. So, again, please
3 forgive us if we seem to be pushing you. But we ask you
4 to give your testimony; keep it focused and precise. And
5 you also have the opportunity to give extended testimony
6 with the court reporter in the corner; so, at any time,
7 please understand you have that opportunity.

8 May I also acknowledge, I think in the audience
9 we have Senator Lorraine Inouye and Councilmember
10 Jacobson. We thank you for your interest and attention.

11 Thank you.

12 Mr. Ka --

13 MR. CALVIN KALEIWAHEWA: Kaleiwahewa.

14 MR. CHANG: Kaleiwahewa. Thank you.

15 MR. CALVIN KALEIWAHEWA: Aloha, everybody.

16 I like know how many homegrowns, paradise parks
17 that is in here right now, that born and raised in the
18 aina. Raise up your hand. Come on. I like see the
19 numbers. Because I'm talking to you guys most of all,
20 because you guys gotta recognize the keiki o ka aina
21 status. Hawaii here in the (inaudible) system of
22 humanity because we represent the heart. In the
23 (inaudible) system of humanity, we represent the heart.
24 That's why we come from one culture, called aloha. And
25 we isolated from the world, in the middle of nowhere, to

1 prove all this from the beginning of time. If you want
2 to check it out further, we go in (Hawaiian), the gentle
3 creation, where kane and his three sons, we make the four
4 pillars of the world, and the four pillars was gods.
5 It's like when you in the west, you have to (Hawaiian) in
6 there. (Inaudible). Technology, war, all came from
7 there. You go to the west, (inaudible) in there.
8 (Inaudible) came from there. You come to Hawaii, come
9 aloha, the living spirit over the water. Now, the three
10 sons from kane is the (inaudible) god. Now, if you can
11 focus on this element of god, you look to kane, akua
12 kane, ako kane, (inaudible) almighty, creator of them
13 all. Now, this is why every keiki o ka aina is important
14 for voice (inaudible), make the mana'o heard, because
15 akua depend on us for the whole world. Believe me.
16 Check it out. We out in the middle of nowhere. You go
17 all over the world. All kind pilikia. No more pilikia
18 here. The pilikia is brought here.

19 Now, for our American brothers, you see, only
20 (inaudible), you braddahs, big braddah or big bully. And
21 the way you guys' track record all around the world, you
22 guys big bullies. Let's change that attitude and make
23 you come out big braddah so you can give up some mana
24 from us and get the nation with mana. You guys no more.
25 You just throw (inaudible); and that's wrong. You guys

1 (inaudible) enough from the real deal of what you are.
2 That's big, the big braddah to the world. You guys gotta
3 be serious. Life is not only physical; it's mental,
4 spiritual, and physical. One without the other, you
5 ain't together. Understand that part.

6 And, furthermore, our aina up there, the
7 mountain, that's for the whole world. We don't want
8 anybody to come here and put their all experience totally
9 against God's akua. You know what you going do? You
10 going (inaudible) the world for what the heart is all
11 about in the world by the system of humanity. Believe
12 me. Consider what I say. I don't need no palapala.
13 Hey, braddah, (inaudible) what I have to say. I see them
14 all here.

15 If you understand Hawaiian word, you would
16 understand all the words in Hawaiian mean something for
17 the human race to know; but you guys don't want to know.
18 You guys want to throw your technology on this, on top
19 our people. And, then, you know what? Make you feel
20 like you guys did something right. You guys -- you guys
21 can't even make your own land right. How can you figure
22 you come in this sacred land and tell me you guys going
23 make it right when you get one bad track record
24 throughout the whole world? Tell me. Give me some kind
25 of mana'o.

1 Okay. I only get one minute more. But I like
2 make it, you know, better. All you guys (inaudible),
3 because our people, no matter what race we are, we born
4 and raised in the aina. You're keiki o ka aina. And us
5 Hawaiians come in colors like the rainbow. You take one
6 haole here, (inaudible). Japanese here, Japanese from
7 Japan, put it with Japanese. The ones that born and
8 raised here, no matter what race. Paradise, braddah. On
9 the mountain, to the sea. And we all come from akua, the
10 (inaudible) body system of humanity. We belong to the
11 (Hawaiian).

12 Aloha.

13 MR. CHANG: Mahalo.

14 May I acknowledge, also, the representative from
15 the Mayor's office, former Senator Andy Levin. Thank you
16 for your attendance and interest.

17 Next person providing testimony is Kanak, to be
18 followed by Herring Kalua, and then Lynn Nakkim.

19 Kanak?

20 MR. KANAK: Aloha. My name is Kanak. I was
21 born on this (Hawaiian), this island. So we get lot to
22 do to say with this aina, the mountain to the ocean.
23 Some guys take care the ocean; some guys take care the
24 mountain. I take care the ocean. So if we can work
25 together, everybody, we can see this through by people

1 like this being here. This how it supposed to be, not
2 one, two, or three. At least, you know, oh, boy
3 (inaudible). I feel like da kine. (Speaking in
4 Hawaiian.)

5 I no can say I like you guys, because I don't,
6 you know. But you guys gotta do your guys' job. You get
7 one job for do, and you guys going do 'em. But try look
8 at things in our perspective and see what's happening
9 here. The (inaudible) over there, the piko. You know,
10 that place is where life started. So we cannot give up
11 that place and have all this bombing going around. So
12 you gotta think of going to one other place, like
13 Afghanistan, like that. So they need help over there,
14 you know, all our men.

15 But before I close, I sue the Hilton Waikoloa
16 for 17 years now. Finally won 'em. And we're finally
17 going to get to be -- everybody go down on the 17 or the
18 18, when they have Recognition Day. I already told
19 Hilton we coming down. The first time they '86-ed me out
20 of there. And when (inaudible) came to Honolulu, I says,
21 "You working for Conrad?" He says, "Yeah." He said,
22 "Look. Can you tell the Hilton to lift up the kapu for
23 me?" And he says, "Oh, sure, as long as you no shackle
24 yourself to the pillars." From them on, I'm back again.
25 So if anybody willing to come there, it's going to be

1 about 5:00, 6:00 o'clock. You can bring your camp, put
2 'em right there, right on the -- across the edgewater.
3 You can camp at the edgewater. So bring your coolers,
4 whatever, and stay there through the 28, which is the
5 next day, and then can go home on the 29. But you never
6 can tell. They might sponsor. They might give us food
7 down there. It's been done plenty times. I got rooms
8 from them. I had food from them. I invited friends
9 over. So that's how it is now. I can leave 'em like
10 that or I can go down there and say, Look, we going have
11 500 people coming down, so let's take care of them. But
12 I gotta have you guarantee that you going come.

13 Everybody going come?

14 Okay. That's how I like 'em.

15 Thank you very much.

16 MR. CHANG: Herring Kalua, Herring Kalua,
17 followed by Lynn Nakkim, and then John -- I'm not sure --
18 Kann, K-A-N-N -- Kanui.

19 MR. HERRING KALUA: First of all, I just want to
20 tell you that I'm a Native Hawaiian, born and raised in
21 Kealakaha. I proud to be a Hawaiian. I proud to be an
22 American citizen. I proud to wear the uniform that this
23 brothers had way back in the Vietnam War, when I was
24 young. And in my family come from generations of those
25 who been into war. It's not by choice, but we wanted our

1 freedom. And I just want to thank the military. I want
2 to thank those who put this program together, where we
3 can share all our concerns with one another, and the end
4 result, we can make it a win-win situation.

5 I saw the display back there. They have people
6 with questions. All I ask from tonight on, don't do
7 anything behind the back door. Just be forward with the
8 people. I think we all here, we accept changes. We know
9 what was done wrong. I agree that by being together, we
10 can correct it and make it our own.

11 And I want to let you all know -- I know many of
12 us are veterans here and all that. And the reason why I
13 support the Stryker, because I seen my grandfather walk
14 through all the wars, my father walk through all the
15 wars, I walked through all the wars. It's not by choice.
16 It's just maybe our knowledge wasn't enough, so we were
17 foot soldiers. But I see things happen that is for the
18 next generation, and I proud of that. I proud of the
19 changes. Because we can talk everything about the
20 military, but when the chips are down, our freedom is at
21 stake. Everyone in here sitting down, we be fighting for
22 our freedom. So I want to thank the military. I'm proud
23 to be an Army retiree, also.

24 And I just wanted to say something real simple:
25 Just remember the Hawaiian culture. There's a lot of

1 things out there that was overrun; nobody took care of
2 it. Just make it correct with the EIS.

3 That's all I have. Thank you.

4 MR. CHANG: Mahalo, Mr. Kalua.

5 Lynn Nakkim, followed by John Kanui, then
6 followed by Mililani Trask.

7 Lynn Nakkim?

8 MS. LYNN NAKKIM: Good evening. I guess I gotta
9 show my kama'aina credentials, too, after following these
10 guys. And I thought I was kolohe. Because I'm
11 Lynn Nakkim, but some people know me as Auntie Tutu. But
12 today we're going to give different kind of talk.

13 I grew up in Hanamawe (phonetic) in Manoa, on
14 Oahu, and finally got smart and got over here about 16
15 years ago to the good island of Hawaii, and I live in
16 Kealakaha now. But I also have a ranch, a horse ranch up
17 in Hamakua, where I raise (inaudible) horses.

18 And just to note one point, this past week, on
19 Wednesday, my farrier and I heard explosions from the
20 training exercises at Pohakuloa, twenty-five miles away.
21 This is not unusual. But I can tolerate it; it's at a
22 great distance. But I mention it to show you how far
23 noise carries now from their operations and the
24 suggestion that a thousand feet is a good buffer zone.
25 That's what it says in the Environmental Impact

1 Statement. And I'm kind of astonished. It's a good
2 buffer zone if you're deaf already. But -- no kidding.
3 And the Army admits that this is a huge problem. And in
4 the entire six-pound EIS, they have no suggestions for
5 mitigating the noise of the training sessions that will
6 sometimes be, according to the officer who I heard speak
7 six months ago, will be twenty-four hours a day, seven
8 days a week. Not all the time, but when they're doing
9 exercises. And you can check on Table 4-5, on Page 431,
10 where it mentions that the noise from ordnance used is
11 labeled as significant and -- anyway.

12 I don't think that the people of Waikoloa and
13 Waimea have a clue, have a clue as to what's going to
14 happen if this goes through. Our preference would be for
15 the buffer zone to be at least ten miles. And, as a
16 matter of fact, I'd like to see it be three thousand
17 miles. I'm absolutely serious.

18 The United States Army owns vast tracks of land
19 in Oklahoma, in Nevada, in Colorado, California, and
20 these Stryker units could be tested and our soldiers
21 could be trained there. What's wrong with that? These
22 tracks of land in these other states are not located less
23 than twenty miles from our bread and butter, from our
24 resort hotels, where most people have family and
25 relatives working. They are not located near the twenty

1 million dollar golf courses or the four million dollar
2 homes. Many of the areas in Nevada, Oklahoma, and
3 Colorado are located hundreds of miles from the nearest
4 telescopes and observatories, another nice clean industry
5 that I'd hate to see ruined. I'm talking economics,
6 economics. That's what should reach the people of
7 Waikoloa and Waimea before the noise hits them.

8 The telescopes are going to be subject to damage
9 from dust clouds, and also vibrations. Vibrations are
10 not good when you're looking at stuff how many light
11 years -- you know, 193 million light years away.

12 Dust? Did I say dust? Until you've driven
13 off-road across the lower slopes of Mauna Kea, between
14 Waikoloa and Waiki'i, where the Army has proposed this
15 acquisition of 23,000 acres, you do not know dust. I
16 used to help train horses up in that area and -- you
17 know, there were a few days a year when it had rained or
18 something and it wouldn't be dusty. But other times it
19 gets -- it's almost hazardous to your health while you're
20 riding a horse.

21 I spoke specifically to a builder who had built
22 a home in Waiki'i, who said that it cost 200,000 to
23 prepare the site for the foundation for a house he built
24 there because the gravel had to be brought in and laid
25 down course after course and compacted with heavy

1 equipment while they were wetting it down in order to
2 make a hard, stable surface. A 1,000-foot driveway
3 properly made, just gravel-surfaced, can cost \$50,000 and
4 takes four weeks to make. If the Army is going to build
5 proper civil roads, it would cost a fortune. If they're
6 going to just drive across the landscape, the tears in
7 the ground cover will become gulches, and the dust will
8 rise thousands of feet and cover the surrounding
9 communities with unbreathable air.

10 Here's one place where the Army agrees with us:
11 For those of you lucky enough to have your six-pound
12 Environmental Impact Statement, check out ES-37,
13 Table ES-11, Lines 5 and 6, fugitive dust from military
14 vehicle use and wind erosion from areas (inaudible) where
15 military vehicle use will be significant.

16 Why not just take some of that money and fix the
17 area up at Pohakuloa that you're driving on right now? I
18 mean, you know, just -- lava doesn't make dust like dust
19 makes dust.

20 We could kill this dust problem with one
21 measure: Just don't buy the extra land. And keep
22 your --

23 Another important point: This is against Army
24 policy. The Armed Services determined in about 1998, I
25 think, that they had enough property; and, in fact, they

1 were shutting down bases right and left, and they
2 established a policy of not purchasing more land. This
3 goes directly against the Army's own policy. Let's help
4 'em stick to their policy.

5 When the guests who used to enjoy the
6 tranquility of the Kohala Ranch Resorts experience bomb
7 blasts at the fourth tee two or three times and stop
8 coming, then we'll go back to the 15 percent occupancy
9 and lose our jobs again; right? Let's not have that
10 happen.

11 Folks who worked hard all their lives to retire
12 in this marvelous climate lose their homes, either to the
13 real estate slump or the wildfires, because these
14 vehicles are going to start fires. Makua Valley has
15 burned how many times? And it wasn't picnickers who
16 started the fires.

17 I'm hurrying through here. I've got a lot of
18 material. I really read that Impact Statement.

19 Here's one other thing: According to our local
20 zoning laws, military use is not allowed in agricultural
21 zones.

22 Go for it, guys. Go down and pound on your
23 representatives' desks and tell them you don't want to
24 change anything; you want to keep it the way it is,
25 pastureland. Pasture is good.

1 Anyway, those are my main points. And anybody
2 want to get in touch with me, my e-mail is NT22@msn.com.
3 Talk to you later.

4 MR. CHANG: John Kanui, followed by
5 Mililani Trask, followed by Hank Kekai.

6 May I also acknowledge that joining us tonight
7 is State Representative Jerry Chang, in the back by the
8 exit.

9 Thank you for joining us.

10 Mr. Kanui?

11 MR. JOHN KANUI: Aloha. My name is John Kanui.
12 I'm also from Kealakaha.

13 I'm also retired military, same with Brother
14 Herring, and we're also for the Stryker Force.

15 The other thing is is that I have a son that's
16 in the Air Force, and I have a nephew that's in Korea,
17 and I have a bunch of family that's in the military. And
18 like Herring had shared, that, you know, we don't want to
19 wait until it's in our backyard, where we have to fight
20 for our liberty to be able to speak right here in front
21 of each other, and lose that liberty. This is what it's
22 all about.

23 How many of you been third world country? Raise
24 your hand. You know how it is in third world country?
25 And you know how it is over there.

1 Okay. You'll have your turn to speak.

2 The situation is, you know, this is an
3 opportunity. And the opportunity is, you know, we work,
4 like, four jobs here, and this gives us the opportunity
5 for our kids, who lives on this island, to have the
6 opportunity to work (inaudible) jobs that this will
7 create in helping, you know, our kids. We say our kids
8 are our future, and this is what I'm looking at. These
9 are my kids that's fighting for our liberty, our country.
10 And, you know, I just want you guys to understand, and
11 that this is why they're giving us the opportunity to
12 debate or to come to an agreement or make it positive.
13 We're a nation. And it says in the Bible, Blessed is the
14 nation whose lord is their God (sic). And this is what
15 we stand on. It says in the back of the money, it says,
16 "In God we trust"; and I believe that, you know.

17 So this is what I believe in my heart. And just
18 like my other brother there that's been in Vietnam and
19 everything and the war -- and there's veterans here,
20 too -- we don't want to wait until these kind of things,
21 the situation happen until we're face to face with death
22 or situation that occurring in third world country. This
23 is a beautiful island, you know. And every place is
24 beautiful to everyone, where you're from, wherever you
25 from. And if you're not happy, then you have a problem,

1 because you supposed to be happy where you're from.
2 You're supposed to love who you are. You're supposed to
3 know who you are. That's why God made all of us. That's
4 why we're all special. We're all different. We believe
5 in one nation, and this one nation is what we fighting
6 for. We're of different forces and everything, but we
7 fighting together as one. We have other nations helping
8 and supporting each other.

9 And, again, let's not forget what's happening in
10 third world countries. We are blessed, and we are -- and
11 we are, you know, free to speak as we are.

12 So thank you for hearing me. And I'm for the
13 Stryker Force.

14 Thank you.

15 MR. CHANG: Thank you, Mr. Kanui.

16 Again, may we ask for all of your understanding
17 and kokua as we listen to our speakers. Feelings are
18 strong; we understand that. Much that is important needs
19 to be said. We hope to have a good process to allow
20 everyone to say what they feel must be said. So, again,
21 may I ask your help with that.

22 Mililani Trask, may I introduce her. I
23 understand she is the indigenous expert for the United
24 Nations Permanent Forum on Indigenous Issues representing
25 the Pacific Basin.

1 MS. MILILANI TRASK: Aloha. I'm Mililani Trask.
2 I'm a Native Hawaiian. I'm a resident of Hilo. And I
3 also live and work here in Hilo. I'm the Executive
4 Director of the Gibson Foundation.

5 Since 2001 I've been holding a diplomatic post
6 in New York as the Pacific Basin representative to the
7 newly formed Permanent Forum on Indigenous Issues. But
8 tonight I am here as a resident of Hawaii Island, and
9 also a resident and citizen of the state of Hawaii, to
10 speak about my concerns and opposition about locating the
11 Stryker Brigade, not only on our island, but anywhere in
12 our state.

13 The U.S. military already has extensive holdings
14 in the state of Hawaii. In fact, data indicates that
15 Hawaii is the most militarized state in America. Current
16 military uses in our state have created significant
17 problems, which the United States military is either
18 unable or incapable of addressing. These problems
19 include things like toxicity, environmental degradation,
20 threats to the security of our community due to
21 unexploded ordnance, and the ongoing issue of
22 compensation for land use. Hawaii Island already has 57
23 known sites that have been or are currently being used
24 for bombing, artillery, live-fire exercises, and other
25 military undertakings. Light ordnance has been found in

1 Hilo, in Hapuna, and last year some school children in
2 Waimea found some live grenades.

3 At present, the United States has no strategic
4 plan to address the threat posed by unexploded ordnance,
5 and it has no fiscal allocation appropriated for this
6 purpose. I would like to have these questions addressed
7 in the continuing review of the EIS for the Stryker
8 Brigade.

9 Number 1: What is the current plan of the
10 United States to address and clean up the live ordnance
11 we have on Hawaii Island? And how much money will have
12 to be appropriated for this purpose?

13 Number 2: What is the current plan to identify
14 and clean up additional live ordnance that would be the
15 result of the deployment of the Stryker Brigade on Hawaii
16 Island? And, secondly, how much funding has been
17 appropriated for this purpose? And where is the funding
18 now?

19 I have reviewed the Congressional record
20 relating to this matter, and I've also combed through the
21 reports relating to the fiscal allocations for this
22 project; but I do not find in the documentation anything
23 that demonstrates a strategic plan to review and go over
24 the lands utilized to determine how much live ordnance
25 remains, and I have not found any appropriation in the

1 Congressional record specifically for addressing cleaning
2 up live ordnance.

3 The Stryker Brigade is going to utilize several
4 thousand acres of Pohakuloa Training Area. At present,
5 and by its own admission, the Army acknowledges that
6 Pohakuloa has the highest concentration of endangered
7 species of any of its other installations in our state.
8 In addition, we all know that there's 250 Hawaiian
9 archaeological sites that lie within the current
10 boundaries of the PTA. Training exercise of the Stryker
11 Brigade will destroy these cultural and natural
12 resources. There is simply no way to mitigate or
13 minimize the danger, the cultural and natural resources
14 because of the Stryker operations using live fire.

15 Hawaii has a dubious distinction of being the
16 state with the greatest number of extinct species and the
17 greatest number of threatened species than any state in
18 the Union. I believe that this sad fact relates directly
19 to the fact that Hawaii is the state that is most
20 militarized in the Union. The history of the U.S.
21 military in Hawaii, from the time of the overthrow of our
22 queen to the present, demonstrates that the United States
23 does not have the ability or the intention to address
24 social, cultural, and environmental issues that arise
25 from their presence. Therefore, I believe that the

1 United States should not be increasing its presence in
2 our state.

3 And, finally, I wanted to say this: In the many
4 years that I've worked at United Nations, and I am more
5 traveling now than at home, and to all the third world
6 countries, to Africa, and Asia, and Central and South
7 America, and even the Pacific, we see there the negative
8 impact of the U.S. military and the world's indigenous
9 peoples. It is not a question of liberty that brings us
10 here nor a question of who is in the U.S. military. We
11 all have ohana that have been in the U.S. military, and
12 we all know that Hawaii Island has the second highest
13 unemployment after Molokai in our state. We do need
14 jobs. But let's see some military jobs to clean up the
15 toxicity, to clean up the environmental contamination, to
16 find the ordnance that our children is finding. And when
17 we look at the issue of liberty, let's also remember that
18 the people who are the indigenous peoples of these lands
19 have certain rights, as well, and they are offended and
20 not furthered by activities such as this.

21 Thank you.

22 MR. CHANG: Mahalo, Ms. Trask.

23 Hank Kekai, followed by Julie Jacobson, followed
24 by Bob Jacobson.

25 MR. HANK KEKAI: Boy, that's a hard act to

1 follow. Mili, I love you, kupuna and from Kona.

2 Welcome all you people from Hilo, wherever,
3 including our guests.

4 And I see we have a politician here.

5 Hello, Andy.

6 I am an activist. People ask me, "What do you
7 do?"

8 An activist is something you gotta live with.
9 My interpretation of an activist is to do something every
10 day for mankind. Before I couldn't speak, I was
11 ignorant; but by being an activist, I got educated.

12 And, like now, I say, right now, to the
13 military, I'm against you people because you going fight
14 this Army, you going lose. I know we get the biggest
15 Army in the world. We know that we not stupid. Some of
16 us Hawaiians might be dumb, but not stupid.

17 And I come in with A, B, C, so simple. Over
18 here say archaeological sensitive areas, A; B,
19 biologically significant areas; C, our cultural
20 resources. A, B, C. I go back to A.

21 Mililani just went right through with something
22 I couldn't even explain to you people. It's called
23 accountability. I'm proud. I'm a Hawaiian. But really
24 I'm not a Hawaiian. I was born an American, and I'm not
25 an American. I found out through reading that I am a

1 sovereign. Any American is a sovereign. I'm a Hawaiian;
2 I am a sovereign. I am independent.

3 People, after last night, I went home; I watched
4 TV all night. In the morning I watched the president
5 talk about dedication, about freeing the world, make sure
6 everything is this and that. I watched his eyes.
7 People, do that when this man talk. He lies. Us
8 Hawaiians, we call that kunana. I brought that word up.
9 I didn't know what it meant. Then somebody said, "Uncle
10 Hank, you always say kunana. What is that?" My
11 interpretation of that Hawaiian word is simple. It's
12 profound observation.

13 I'd like to come into meetings like this, sit in
14 the back, watch all the people, people-watching,
15 whatever, look who speaks; the language. I'm a Hawaiian.
16 I don't even speak the language. People at the
17 (inaudible), "You Hawaiian?"

18 I say, "Yeah."

19 "How come you no speak the language?"

20 I say, "I went English school." We never had
21 Hawaiian, never did.

22 Like I say, I'm an activist. I care less. I'm
23 ready to die. I'm 79, will be, four days before
24 Christmas. And it's a morbid thought; it is a morbid
25 thought. I born in the island of Oahu, raised in Kalihi.

1 For you people who been there and don't know what Kalihi
2 means, it means Kalihi when we were kids. Rough country.
3 Raised in Waikiki. I'm a beach boy. My brother is a
4 legend. He's in the Hall of Fame. His name is Rabbit.
5 He's in the Hall of Fame. I'm in the Hall of Shame. I'm
6 not proud of it; I'm not ashamed of it. I've been in
7 prison. I am an ex-convict. So was Queen Liliuokalani.
8 To you Hawaiians who do not understand, the queen was put
9 in jail because she wanted to write a constitution,
10 Hawaiian constitution. Then the terrorists declared war.
11 She never gave it up.

12 I wear this shirt. This is known as the lawful
13 government of Hawaii. That was the queen's last
14 statement during all the time she went in. Do your
15 research for things like this. And the queen have never
16 given up this land. It was held in trust to the
17 terrorists. I use the word "terrorist" because I'm not
18 afraid, because, simply, it's truth.

19 When I say "terrorists," our president,
20 George Bush, right now, this morning, I watch him talk
21 about all the people dying. He say we looking for
22 Saddam Hussein, for weapons of mass destruction. Okay,
23 okay. Come Kona. There's a new one just came in. It's
24 called a tank; it's called a Stryker. It is a weapon of
25 mass destruction. Like we all -- I talk kinda hard.

1 Aloha aina. I love this land. Really. I'm not afraid
2 of dying. I go against anybody, believe me. I believe
3 in one akua. And I think -- it's the same one. I just
4 found out. When I talk to people of religious belief,
5 they say, "Hey, your God is like mine. All he does is
6 spread love, aloha."

7 And then I tell that guy, "You know, what? You
8 Buddhist?"

9 He tell me, "Yeah, me Japanese."

10 I say, "Oh, katonk, yeah." You know, we can
11 talk because we local. And I found out the Buddhists are
12 good. Now I learn the word "shalom aloha". Hey, it's
13 beautiful. I learned about born again. I don't know. I
14 hope I'm one of them. And when I come back, I like be
15 one bird so I can fly around, look around, collect
16 kunana, profound observation, see a few people that doing
17 what the man above me created this earth for you people
18 to enjoy. And that's about it.

19 I see over here get one minute.

20 Oh, from now I can start one minute?

21 Sometimes you gotta play dumb, you know.

22 So I guess my time is about out. And I came all
23 the way from Kona, and I'm not running for office yet. I
24 ran for OHA. I didn't understand that, so --

25 Oh, yes, this man is not for Hawaiians. When

1 they gave him the Medal of Honor, I tell you something
2 because my ohana deserved that. The terrorists started
3 this war on the 7th. An airplane land, I think on the
4 Island of Niihau. A Hawaiian killed that pilot out of
5 the plane with his bare hands. It was our aina. The
6 Japanese came here. But, hey, the people in the 42nd are
7 sovereign Hawaiians. They born in here. Japanese are
8 better in Hawaii, being Hawaiian than in Japan. That
9 goes for every race on the face of this earth. People
10 like take away Kamehameha School. Pick up the first
11 five. Look at 'em. Oh, you figure this one Filipino.
12 When they come inside, I'm Filipino, Spanish, Hawaiian,
13 Chinese, Japanese, English, Swedish, Jewish. I mean, the
14 best thing when they say, and Irish. That's very good;
15 that's very good.

16 So don't take away something that the -- one of
17 our ali'i. Our people live legacy. This is why us
18 Hawaiians are the most unique race on the face of the
19 earth. All of our ali'i. Queen's Hospital, the Queen
20 Kaahumanu -- not Kaahumanu -- Emma gave that. Our
21 education can be taken care by Bishop. She made that.
22 We get the greatest. You guys ever watch PBS? Look at
23 it nowadays, when Kamehameha School put on programs.
24 Hey, pau kaponu. There's no other place in the world
25 that does things like that.

1 Mahalo for your interest. I speaking from my
2 heart as a Hawaiian, American, sovereign, whatever.

3 Mahalo. Thank you. No. As we say in Hawaiian,
4 domo arigato.

5 MR. CHANG: Julie Jacobson, followed by
6 Bob Jacobson, and then Hannah Reeves after that.

7 MS. JULIE JACOBSON: Thank you so much.

8 We were here some time ago in this room, facing
9 that way, and many of us saying some of the same things.

10 I'm opposed to the transformation, the expansion
11 in general, for a number of reasons. I'm going to just
12 frame them in the perspective of the Green Party,
13 specifically the Hawaii Green Party here. But as some of
14 you may know, not all of you, we have four guiding
15 principles or pillars, and they are social justice,
16 non-violence, grass roots democracy, and ecological
17 wisdom. And this project doesn't make sense in terms of
18 each one of those.

19 And I won't elaborate for a long time. We have
20 70 people here.

21 But, of course, we've all heard about unexploded
22 ordnance. I think from my last time here it was very
23 disturbing. I didn't get what I thought was a
24 satisfactory answer about the issue of depleted uranium.
25 And more and more is coming out on the dangers of that,

1 the dangers from the previous Gulf War of that, and no
2 one has assured me that we will not have depleted uranium
3 used here. And as we see our environmental rules
4 deteriorating and being eroded all the time, I have no
5 expectations that we're going to be improving our dealing
6 with these things.

7 Let's see. In terms of non-violence -- well,
8 obviously, we're preparing for a -- just generally, a
9 more militarized war. I've never been so discouraged as
10 I am now in my whole life. My sense is that we're in for
11 perpetual war. There's no sense that we are aiming to
12 generally create peace in the world. We are looking at
13 being -- deploying things like Strykers because they can
14 easily go all over the world, so that we can continue --
15 we can have, you know, practically no peace in between
16 our war, and we can take our war anywhere. And that
17 discourages me. And I think this is -- we are seeing,
18 you know, so many people here that weren't here the last
19 time, and that this -- you're seeing the growth of all of
20 humanity, but Americans, as well, unhappy and ashamed of
21 our country and what's happening and where we're going.
22 And I think as someone who's been a teacher for over a
23 quarter century, a licensed practical nurse, a school
24 counselor, and four years as an elected official, and my
25 sense is that I'm not -- I wasn't out of step in these

1 issues as they've been brought up, that people called me,
2 people kept saying, Oh, you're going to hurt, you know,
3 your career speaking out on these issues. But I've
4 had -- for every person who might call me opposing it,
5 I've had 20, 30 people who would either call me or come
6 up to me and support me. So I think this is a widespread
7 sense on our island.

8 And I'm sure other people will go into a lot
9 more detail, but we've had people do some really
10 tremendous research on the issue of our existing sites.
11 All over this area. People didn't know that we had
12 firing ranges in Mountain View, and there's listed many,
13 many of them. And I'll let other people elaborate on
14 that.

15 But I just think it's good that we're here to
16 say no. I hope that the military -- I don't necessarily
17 expect it, but would really take to heart the meaning of
18 this to the people here and how significant it is,
19 especially in terms of the social justice factors.
20 That's why our Hawaiian people are here.

21 And I remember when I heard Skippy make a point
22 about occupation of -- you know, coming in while in Iraq,
23 they better get used to it, because when Americans come
24 to occupy, they're here for a long time. And I think
25 that says it. That's the fundamental social justice

1 issue here. And all those other issues are very real and
2 true and deep to my heart. And I will spend the rest of
3 my life taking these positions and playing this role as
4 someone who speaks out about these issues, and I hope
5 many others here will, too, as well.

6 Thank you for the opportunity to speak.

7 MR. CHANG: Thank you, Ms. Jacobson.

8 Councilmember Jacobson?

9 MR. BOB JACOBSON: Aloha. It's really good to
10 see you all here tonight.

11 I wish that they would not be expanding this
12 training area. It's very sad. These are good, honorable
13 gentlemen up here; they're intelligent. And they should
14 easily understand that the military really needs to clean
15 up and make amends for their actions and their messes.
16 They need to do this before we even talk about expanding
17 any of these bases or expanding any funding or any of
18 these items. Their hearts -- you know, they're good,
19 honest people, and they're here, they think, to protect
20 our country.

21 My dad was a Marine. He entered the Marines
22 thinking he was there to help protect the people, and he
23 spent two years in China during World War II killing
24 Chinese. Did we ever declare war on China? As far as I
25 know, we never did. But he followed orders, just as

1 these gentlemen here will be following orders. So if
2 Donald Rumsfeld tells them to use live ammunition and
3 depleted uranium up on our base, they'll do so because
4 that's their job, that's what they're trained to, and
5 that's what they do. That's just, simply, their job.

6 I don't have any great faith that Rumsfeld or
7 his successors are going to tell our military to take
8 care of the environment. They haven't really done a very
9 good job of it so far.

10 A quick tour through PTA will show you that
11 there are many exotic species throughout the whole area.
12 There's burned ohia trees. There's live ordnance lying
13 all over the place. And, surely, the officials at PTA
14 are doing some cleanup, but it's far too little, far too
15 slow, and at the rate they're going will take literally
16 eons to make any cleanup that's meaningful.

17 Our whole island, as people have said, is
18 covered with these sites, not only the land mass; but
19 there's piles of unexploded ordnance offshore at Hapuna
20 Bay; also out of Hilo Bay, just outside the break water.
21 And, actually, for that reason, I will be introducing
22 legislation that will map all the unexploded ordnance on
23 our island so that civil defense officials can have some
24 safety when they go out, so that when investors choose to
25 invest here, they will know what they're investing on, if

1 they're investing in a mine field or depleted uranium
2 site or if there's hand grenades lying around. People
3 really do need to know that before they invest their
4 money and put their children out there. Certainly owners
5 who have this land right now may not be happy about the
6 idea. But when the next owner buys it and their children
7 go out and blow off their leg with a hand grenade,
8 they're going to wonder why somebody didn't tell them.
9 So I think this is a really important bit of legislation.
10 I've spoken with our civil defense officials; they're in
11 favor of it. They'd like to be able to know when they
12 send their people out to these sites that they're going
13 to be safe.

14 Because I feel strongly that we must protect the
15 health and welfare of the people of Hawaii, I think that
16 this is not a good idea at this time. It's in our
17 constitution, our Hawaii constitution. Although it's not
18 the official Hawaiian constitution, it tells me that I'm
19 sworn to take care of the health and welfare of the
20 people of this state. I take this charge very seriously.
21 And everything I do, every bit of legislation that runs
22 across my desk, I try to promise myself to do no harm to
23 these people and their health and welfare.

24 By expanding the base at this time, I feel that
25 this is damaging the health and welfare of not only our

1 people, but our culture and our lands. And, after all,
2 the most valuable thing that we have here is our
3 environment, our culture, and our people. Without those
4 three things, we are nothing.

5 I think we really need to clean up our problems
6 before we allow any military expansion on this island.
7 Only then could we have any meaningful discussion. Right
8 now, the discussion is really at the barrel of a
9 gunpoint.

10 We are repeatedly told by our president that we
11 are currently at war and probably permanently at war,
12 despite the fact that Congress has not declared war on
13 anybody.

14 During wartime, our military is given
15 considerable latitude -- in fact, free reign, in my
16 opinion -- to do pretty much anything they want.
17 Although we have, apparently, rules in place that would
18 prohibit the use of certain types of munitions, I don't
19 think that those prohibitions would hold firm.

20 I just think that it's time that we start
21 looking at nonviolent solutions to our problems.
22 Violence is not the answer.

23 Thank you very much.

24 MR. CHANG: Thank you, Councilmember Jacobson.

25 Our next speaker is Hannah Wahinemaikaio-

1 kaahumanukeliulananioleokalama Kane Reeves.

2 MS. HANNAH REEVES: Aloha. It is an honor and
3 privilege to be here tonight on behalf of my ohana. And
4 first my aloha to every one of you, knowing that I'm a
5 very strong person in protecting Old Hawaii.

6 My name is Hannah Wahinemaikaiokaahumanu-
7 keliulananioleokalama Kane Reeves. I born and raised in
8 Kona. I'm hundred percent Hawaiian, both parent. I'm
9 one of the living descendants on the kahuna line, and
10 also on the ali'i line.

11 I want you to know that the training area where
12 they at belongs to my ancestors, way before white man
13 came here.

14 I going tell you that all the sites that I'm
15 going to tell you tonight: Site 20872, 20873, 5002,
16 20856, 20854, 208 -- 20855, 20864.

17 I'm sorry, but I'm just shaking because I know
18 that my ancestors want me to say all the sites.

19 20862, 7119, 306, 513, 21148, 325, 324, 323,
20 322, 315, 316, 118, 127, 20873, 20852, which is the
21 historical burial site, 154-17, 20862, 20856, 20865,
22 20869, 20872, 20877, 20873, 20864, 20818. And all these
23 sites is on Ape. 10369, 20855, 21150, 7119, 20878,
24 20870.

25 On the other sites, Historical Site

1 50-10-31-5022 -- I'm sorry -- 5002, 50-10-21-20855.
2 50-10-31-14638, 50-10-32-0 -- 20865, 50-10-32-20877,
3 50-10-32-211150; Site 10309, 50-10-33-20878, on all of
4 the trails of the Pu'u'o'o.

5 I am claiming all of these sites because they
6 sit right on my ancestors' land, where the military has
7 been using since 1930. And I want to tell you that
8 there's several of the sites that has been destroyed by
9 them because of the bulldozer. I just don't know how
10 they're going to replace all the damage that they did to
11 my ancestors; and I say thousands of them been run over.
12 I feel in my heart that dead already. I laying on the
13 mountain and they cutting my head off, cutting my leg
14 off, they cutting my stomach off, they cutting my hands,
15 they letting me bleeding for over hundred years because
16 of my ancestors. I am a living person that comes from
17 the line, from both sides, and I'm letting the military
18 know that they have abused me, and I say because they ran
19 over my ancestors, they destroyed them, and they a part
20 of me.

21 Now, how can our people be compensated when
22 there is many, many things that the United States has
23 done wrong to us? How can we be helped?

24 They say that they will come here and they will
25 build up to help us. But they already killed me. They

1 already killed my family. The bones are very sacred to
2 us because we come from the very sacred, sacred
3 genealogy. And I know there are many of you here knows
4 what I talking about.

5 I just want to tell you, Clarke -- I just don't
6 know what to say. I cannot tell you to build because you
7 already killed me. And I know in my heart that I have to
8 be here. I cannot be sorry all my life.

9 When will the United States pay me for the
10 damage that they've done to me and my family?

11 They did it to Liliuokalani; they did it to all
12 of us for generations; and they still doing it today. I
13 don't understand. They trying to say that they help us,
14 but they not. They not. Because you know why? I still
15 living. I will continue to protect Old Hawaii. I'm a
16 person that protect all the heiau, the pu'u, the trails,
17 the mountains, the water, mauka and makai, the apua'a.

18 We are blessed. Our people, we are so blessed
19 because we have a beautiful land. And we cannot let
20 anyone continue to come to this land and destroy us.
21 They need to help -- they need to help us, the people, to
22 be healed. We not healed. There are many of them, many
23 of us on the field.

24 Please, Hawaiians, if you claim you're Hawaiian,
25 protect the land, protect the heiau, protect the trails.

1 And I am from one of those that stopped the trails. I
2 mean, I stopped the highway, too. Believe me. I really
3 did it in Kona. And I will continue to do that to
4 protect Old Hawaii. They can build, but watch out. They
5 better not run over me.

6 Thank you.

7 MR. CHANG: Mahalo.

8 The next speaker is Moanikeala Akaka.

9 MS. MOANIKEALA AKAKA: Aloha ke aloha.

10 My name is Moanikeala Akaka. I'm a former
11 trustee for the Office of Hawaiian Affairs for 12 years.
12 I also founded the Aloha Aina movement.

13 First, you of the U.S. military take
14 Pearl Harbor in the mid-1800s. Then, 1893, the U.S.
15 military overthrew our queen, while for months leading up
16 to the overthrow. U.S. emissary Minister Stephens was
17 conspiring with the sons of missionaries, including
18 editor of the Honolulu Advertiser at that time,
19 Lauren P. Thurston, to take over our Hawaiian Islands.

20 Today, we're not only a colony of yours, but the
21 U.S. military already controls 25 percent of Oahu, which
22 has a population of a million people. There are more
23 than 50 former and ongoing military sites on this island.
24 Hundreds of thousands of acres are littered with
25 unexploded bombs and toxins from conventional weapons,

1 training, and secret chemical and biological weapons
2 testing. Military hazards are present on our lands and
3 in our waters. Tides expose munitions buried in the sand
4 off Hapuna Beach, Hilo Bay, and other areas. Last year,
5 several live grenades were found by school children in
6 Waimea, in the Waimea Middle School garden.

7 Clean up. Don't build up. Our traditional
8 value system is based upon aloha aina, to love the land,
9 to protect the land for the present and future
10 generations of Hawaii Nei. Malama ka aina. Clean up the
11 mess you've left since the second World War. Your track
12 record is dismal. 47 of more than 50 former military
13 site areas on this island have known hazards. Still,
14 enough is enough. Clean up these 47 sites the past
15 military -- that past -- in the past the military before
16 you even consider any expansion at Pohakuloa.

17 Pohakuloa, besides being a sacred area and
18 108,793 acres that you already have, and now you're
19 trying to expand this by 23,000 acres, and maybe more.
20 Besides being a sacred area, a holy place of union in
21 Hawaiian culture, Pohakuloa has the highest concentration
22 of endangered species of any Army installation in the
23 world, according to former Pohakuloa commander,
24 Lieutenant Colonel Dennis Owen. Pohakuloa exists in a
25 sub-alpine tropical dryland ecosystem, between 4,000 and

1 8,600 feet elevation, one of the rarest ecosystems in the
2 world. There are approximately 30 species of endangered
3 and at-risk plants and animals found at PTA. There are
4 also over 250 known ancient Hawaiian archaeological sites
5 within PTA's boundaries.

6 The 23,000-acre expansion that Pohakuloa
7 military plans also called for an expanded runway, fuel
8 and ammunition storage at PTA, along with constructing a
9 new tank trail all the way from Kawaihae Harbor.

10 The vast majority of the 108,000-plus acres at
11 PTA, more than a 175 square miles, involves a 65-year
12 lease from the state of Hawaii for the grand sum of one
13 dollar -- shameful -- while the few Hawaiian programs
14 that we struggled for for decades end up being under
15 attack legally and otherwise.

16 What are you gentlemen doing to help us get the
17 justice that we Native people deserve? These attacks
18 that we have for the few Native rights and the few
19 entitlements that we Native have that are threatened and
20 under attack at this point, what are you doing to help
21 us? When you know these islands are stolen territory.

22 Remember that 400 million dollars was spent to
23 clean up Kaho'olawe, and only about 10 percent of the
24 unexploded ordnance on the land and in the surrounding
25 areas have been removed.

1 The U.S. needs to stop invading and occupying
2 other countries. With hatred for U.S. imperialism
3 growing globally, a large U.S. military presence in
4 Hawaii makes Hawaii a target for terrorist attack, as
5 does the addition of this Stryker. We don't need the
6 Stryker. Your record has shown how -- how irresponsible
7 you have been to our lands, for not just a hundred years,
8 but for sure the past sixty years of -- since you've had
9 these military bases. And I'm just speaking about those
10 on this particular island, not the others, as well. I'm
11 speaking for this aina.

12 You know, I'd like to say that my family has
13 been involved in the military a great deal. My father
14 couldn't go -- couldn't join the military during
15 Pearl Harbor because he was fixing the radios at Hickam
16 Field. And he was in the Air National Guard for decades,
17 and was also civil service for the military, fixing
18 radios, fixing flight simulators at Travis Air Force
19 Base. My mother was a nurse for 30 years at Travis Air
20 Force Base. It's military people she took care of. Two
21 of my brothers were -- were -- worked at -- were
22 apprentices and also journeymen at Mare Island Military
23 Base -- Naval Base. And one of my brothers even worked
24 on the so-called Kamehameha nuclear sub, of all things.
25 That's a sad commentary that they named a sub after our

1 king. But I just want you to know that I -- my family
2 has military background. And, in fact, one of my very
3 close relatives is a helicopter pilot and has already
4 been to one war, and we don't want him to go to another
5 one. He's a helicopter pilot for the military.

6 Enough is enough. We are tired of our homeland
7 being colonized and used as a stomping ground for the
8 military and an R&R center for everybody else. So,
9 please, keep the Stryker someplace else.

10 Mahalo.

11 I also have a statement to read for someone that
12 unfortunately couldn't be here. This is a statement for
13 Tomas Beliski. It's a poem.

14 Who will teach us peace? Who will teach us
15 peace?

16 All about us is war, machines of war, talk of
17 war, news of war. All roads seem to lead to war.

18 Who will teach us peace?

19 One side's terrorist is the other's national
20 hero. Even George Washington was one side's traitor
21 before he was exalted as founding father for the other,
22 and the American dream was born.

23 Yesterday's progress has backfired into killing
24 machines, even more clever killing machines.

25 But when do we learn peace?

1 For the children long for peace. The elders
2 weep for peace. The great warrior and President Dwight
3 David Eisenhower prophesied one day that many peoples of
4 the world who long for peace will demand peace from the
5 leaders, and woe unto those who would impede this
6 universal desire.

7 Ours is the age of the shrinking planet. The
8 global village, the miracles of technology that would
9 unite us need only the vision and strength of will to
10 deliver the peace to all peoples. We can find a way out
11 of the quagmire of war. We must find the light that will
12 shine upon all the world's children. Ours is the
13 generation that is asked to forgive yesterday's
14 trespasses, that we can bestow upon tomorrow the hope and
15 aspirations so many have sacrificed toward. Let us, the
16 USA, lead in the struggle for peace and justice.

17 Aloha to you, Tomas Belski.

18 Mahalo.

19 MR. CHANG: Mahalo.

20 Thank you all for your patience. I think this
21 is a good time for us to take a break. We've been going
22 about an hour and a half. I appreciate your kokua. So
23 why don't we take about a ten-minute break, stretch, get
24 some refreshments. We'll see you back here in ten
25 minutes.

1 For your information, we will start with

2 Steve Tayama, Kelii Ioane, and Michelle Minchew.

3 (Recess from 8:35 P.M. to 8:43 P.M.)

4 (More proceedings were had on the following page.)

1 MS. AMARAL: I'm Annelle Amaral, one of the
2 facilitators here this evening. We called some names, and
3 unfortunately, we overlooked one of the speakers that
4 actually was supposed to be called, and so I'm going to be
5 calling her as well.

6 So as people are coming back in and getting settled,
7 a couple of reminders we'll give you. The first is that
8 we've got, at last count, I think -- yeah, it's 74 people
9 signed up to speak. At that rate -- and we're now on
10 number 15 it looks like. So, at that rate if everyone
11 speaks for just five minutes, then we're here until 3:30 in
12 the morning. Not a problem unless you're number 74, I
13 guess.

14 If you -- if we speak over five minutes, then we just
15 sort of double the number, then -- if we speak over five
16 minutes, then we double the hours that we're going to be
17 here. So right now, it looks like with 74 speakers, if we
18 go five minutes, we're here until 3:30, and if we speak
19 more than that, we're here even longer. I have no problem
20 with being here until 3:30, but we'd ask your kokua, try
21 and be succinct, try and summarize, try and stay within the
22 five minutes.

23 I'm going to be laying a card here reminding you when
24 your time is up. I mean you no offense, I promise you in
25 advance. It's just to remind you that time is out, that's

1 all, and you finish your thought and your mana'o.

2 Again, the steno -- the stenographer is located in
3 the back of the room for those of you that cannot stay, you
4 can give your testimony and it will go into the record, and
5 that's another way to contribute your mana'o here this
6 evening. If you have written testimony, you don't need to
7 read it into the record. It will go intact, and what would
8 help is if you would summarize your testimony. So another
9 thought.

10 We love to visit with one another. This is a time
11 for us to see old friends, and I love visiting with old
12 friends as well, but can I encourage those people that are
13 having the conversations in the back of the room, to take
14 the conversation outside, that way people that are in this
15 room can hear one another, and you won't be disturbing them
16 and you can still visit. Okeydokey, enough of that.

17 Let's look at who's coming up. The first speaker is
18 Roselyn Smith, the second is Steve Tayama, and the third is
19 Kelii Ioane. Roselyn.

20 MS. ROSELYN SMITH: Aloha. My name is Roselyn Smith.
21 I teach at Hawaii Community College. I've been there for
22 the last 12 years. I first moved to Hawaii in 1968. I was
23 raised in a military family. I lived as a child on 12
24 military installations. My father was a three star general
25 in the Army. My brother-in-law was a four star general in

1 the Army, so I saw the Army firsthand up close. And just
2 to put it on the record, I brought a picture of my father
3 when he was the commanding general at Fort Campbell,
4 Kentucky with President Kennedy, right before Kennedy was
5 killed. I also brought a picture of the major generals --
6 the generals that were involved in the Vietnam War in the
7 mid '60s, including my father.

8 And so one of the things that I learned in my
9 military upbringing was how important it is for us all to
10 question the military.

11 (Applause)

12 MS. ROSELYN SMITH: I learned at a very early age
13 that the military, the Army, can misuse its power. We've
14 seen this. The Army, of course, made a lot of very -- it
15 lost the confidence of a lot of the American public during
16 the Vietnam War. Some of these generals were disgraced.
17 Their careers were ruined by not being truthful, and so one
18 of the things in my short five minutes that I want to
19 address tonight is asking the question, can we can trust
20 the Army?

21 Can we have faith that we -- that they will do as
22 they promised they will do? And what is their track record
23 here? What is their track record in Hawaii? What is their
24 track record on this island? I'm glad to see tonight that
25 we have the Hawaii Tribune Harold reporter Dave Smith here,

1 because Dave Smith gave a lot of good advertisement to the
2 Army when he wrote this front-page article. I hope that we
3 get some fair coverage tomorrow in Hawaii Tribune Harold.

4 (Applause)

5 MS. ROSELYN SMITH: One of the things it said in this
6 article, that probably most of you've read, are the
7 promises that the Army has made. And I raised the
8 question, can we trust them? Can we trust them when they
9 say that they will have dust control measures by
10 restricting activities when winds are strong and
11 unfavorable weather conditions?

12 If any of you have ever been there, I stayed at Mauna
13 Kea State Park over a hundred times in the last 20 years,
14 and I don't know if any of you have been there when there's
15 dust storms. It is one of the most arid places on this
16 island, and what the Army promises here is that they will
17 rotate activities to reduce wear. They will control dust
18 by watering and hardening the roads with biodegradable
19 binding material. This is a big promise.

20 Another thing they promise is that the purchase of
21 this 23,000 acres of Parker Ranch, they promise that they
22 will have no live fire training on that 23,000 acres. From
23 my experience, I don't know that we can trust the Army that
24 it's going to keep this promise. They also promise that
25 artillery rounds fired over Saddle Road will cease once we

1 have the new Saddle Road. We all know that we may never
2 have that new Saddle Road, which means artillery fire could
3 continue over the current road. And also they promise --
4 the Army promises that the cultural sites -- none of the
5 cultural sites will be affected, including the one
6 registered with the national registry historical places,
7 Bobcat Habitation Cave, that the Army promises that it will
8 modify its plans to avoid these cultural sites.

9 Another issue that I'd like to raise is something
10 that terrifies me about our future is that as Hawaii
11 becomes more militarized, it sets Hawaii up as a target for
12 intercontinental ballistic missiles from Korea, from China.
13 If Hawaii is attacked with an ICBM, civilization as we know
14 it will disappear. I have lived on military bases with
15 ICBMs. I know -- I know what this means for this small
16 aina in the middle of the Pacific.

17 The military expansion in Hawaii, the Stryker Brigade
18 reinforces Hawaii as a dangerous role as a military nerve
19 center in the Pacific. I read a letter to the editor that
20 I'd just like to repeat for you a couple of weeks ago. It
21 said, "Further militarization of Hawaii increases the risk
22 of us all becoming a magnet for rogue nation missiles and
23 terrorists. Pearl Harbor was not bombed six decades ago
24 because it was filled with Outrigger canoes."

25 (Applause)

1 MS. AMARAL: Mahalo. Steve Tayama followed by Kelii
2 Ioane followed by, sorry, Michelle Minchew. Steve.

3 MR. STEVE TAYAMA: Aloha. I have to apologize to the
4 Big Island folks for taking a spot. I come from Waimanalo
5 on Oahu, but myself and six of my friends were arrested for
6 carrying signs of mass instruction, so I come here to
7 testify instead.

8 So, about the Strykers, they say we need these tools
9 because there's a threat to the United States. In 1964 I
10 did what most poor local boys and wahines did and joined
11 the service. They said that there's a threat from Vietnam,
12 that the communist were coming. So we joined. We did our
13 duty. Vietnam has been a communist country for 30 years.
14 Where's the threat? Where's the threat?

15 See, you have to -- you have to discriminate between
16 patriotism and hypnotism. We wen learn. Those of us who
17 went in the service, we wen learn. People lie, and it
18 broke our hearts, those of us who trusted America.

19 The real threat is like the lady just spoke before me
20 is that you militarize Hawaii, you make us into a fort.
21 You put planes and carriers and tanks, and we become a
22 target. And World War II, Japanese had to attack Hawaii.
23 They didn't attack Honolulu or any city on the Island of
24 Oahu, but they attacked just about every military base that
25 was there. They had to do that. Unavoidable military

1 target, that's what you making us now.

2 These Stryker vehicles are 20-ton, fast striking
3 stuff all over the world. Where's the self defense? How
4 come we going someplace? Where we going? Who made us the
5 policeman of the world? Yeah. Who we protecting? Us.
6 You're not protecting me.

7 So you have this 20-ton vehicle, what it really is,
8 and I see this clearly, is a police vehicle to go manage
9 and hold down people that look like me, running around bare
10 foot with an M16 or whatever it is, that I have a little
11 grenade. It can destroy this million-dollar tool with a
12 grenade, a rocket launcher, a little shoulder held rocket
13 launcher. And who has that? Who's going to fight America
14 with that? Poor people fighting for liberation, trying to
15 get some dictator off of their back, so we going over there
16 and do what?

17 They wanted to send troops to train in Waikane Valley
18 on our island to go to the Philippines, and Filipinos came
19 over and said, gee, there's only about 50 terrorists over
20 there, what we call terrorists in the Philippines, gee, you
21 no need come, so why you doing that? Why are you training,
22 to do what? To train for peace, li'dat. You cannot stop
23 terrorism. The other thing -- the other threat terrorism.
24 You can't stop terrorism with a tank. Yeah? Cannot. Just
25 think about that. You cannot stop it with a tank. Only

1 thing gonna stop terrorism in the world is fair play, you
2 know, justice, things like that. That's the reality of it.
3 People don't like us, not because we have tanks or aircraft
4 carriers, that's not why they no like us. So, now we're
5 gonna have more tanks, gonna send them around the world,
6 you know, that's bully stuff. I come from Kalihi. I no
7 like bullies. I'm one small Japanese. I no bullies. I
8 get bully, okay.

9 Another thing that's going on is a Hawaiian process
10 for self determination and self governance. You have tanks
11 around, you have all these military guys standing around,
12 all this military build-up going on. It puts hesitation,
13 fear, intimidation into our minds, hopelessness. Like, oh,
14 bruddah Steve, no can. Look at them, they get all them
15 tanks, and all this stuff, gee, brah. They get too strong
16 for us. You know, get that stuff out of here because we're
17 having a process to have our country back, and speaker
18 after speaker has talked to you about that.

19 I don't think you -- you know, let me put it simply:
20 You like end the sovereignty movement, prove us wrong. You
21 get all the lawyers in the world. Us guys, we got to make
22 kalua pig sales fo' go to Netherlands and places li'dat,
23 you know what I mean, hire one lawyer. Just prove us wrong
24 and can pau our sovereignty movement, it will go away.
25 Because me, I like go fishing. I'm tired of doing this.

1 Mr. Inouye says it's a done deal. Long time ago he
2 said that. You guys remember. He said that in the paper.
3 You Americans remember. If it's a done deal, then why are
4 we here then? Why we doing this then? The money already
5 got spent, appropriated in the Congress, so why we here?
6 Who we still polishing up? Remember, hypnotism,
7 patriotism? Who hypnotized?

8 You going to give back 28,000 acres of Kaho'olawe,
9 and then they asking for 30,000 to do the same thing.
10 Hypnotism. Patriotism. Yeah, we know about that. So I
11 just say to you from Waimanalo, Big Island, you know, stand
12 up strong against this stuff. Don't be hypnotized. It's
13 not about peace. It's not about self defense. It's not
14 about protecting you. It's about going around controlling
15 the world. Aloha.

16 (Applause)

17 MS. AMARAL: Mahalo. Kelii Ioane followed by
18 Michelle Minchew followed by Hanalei Fergerstrom.

19 MR. KELII IOANE: Howdy. As a native kanaka, I'm
20 against you, fella. I got a letter from the people in the
21 moon, and they ask me how you guys' track record? I said
22 kill them right away. They spread like flies. The people
23 from the moon, they said, how they follow with the
24 environment? I said nasty, and watch out for other
25 Ms. Gordon and Jim West. They come smiling, but they

1 famous from clipping from the rear, you know. I don't know
2 about you guys, soldiers -- you guys is soldiers, and I
3 believe you people are well trained. You don't need to get
4 any more trained. You no can find Osama. What else fo'
5 training you need? You never hit the guy, the main guy,
6 Saddam, Osama, all those guys. Why you keep training? You
7 never find them yet with the training you already get.
8 Stop. If you find yourself in one hole, stop digging.

9 Anyway, now, if this is an environmental thing,
10 environment, you fella nasty. You know, first of all, your
11 guys -- I'm going off on a tangent because I get five
12 minutes. You know religion, you guys over there in Iraq
13 because Jed Clampett sent you guys there, and all I telling
14 you is that, you guys no clean up behind yourselves, kapu
15 lo'oko. You know, when you make rubbish, you just leave.
16 That's poor upbringing. George Washington, maybe he was
17 that way, but why you just bomb, bomb, bomb, and leave?
18 You bomb one place to smithereens, oops, that's enough. We
19 go the next place, bomb, bomb, bomb, you go Makua, Waikane
20 Valley, Kaho'olawe, but you no clean.

21 That's the thing that I feel, but I know as soldiers,
22 it's not you fellows' fault. That's what you train for,
23 okay? But what in the whole world was a global market.
24 You couldn't have bombed in Kahala? Why not go bomb
25 Kahala? You know in Kahala? Waialae, where they hold the

1 golf tournament, go bomb over there, and then we see how
2 the reaction, but what my point is, as soldiers, I no hold
3 you -- I hold you in high regard.

4 As soldiers, you're a well-trained instrument, but
5 because you're not made for conscience, you're just made
6 for muscle, but the one that you work for, Exxon, Philips
7 76, now these people, the environment of the world, they
8 are up fo' grab, you know. The evil of your employer is
9 amazing, and so how you can keep the income coming in
10 through the rape of resources is to no let nobody else take
11 'em, that's why they train you. You go punch him in the
12 head, bam, and as soon the other guy go to grab the oil,
13 boosh, he's out. That is what my concern is.

14 Because you don't own the earth. You don't own the
15 resources of the earth. What you should do, Mr. Soldier,
16 is to ensure equitable distribution of the resources to
17 Pu'umaile Village to Nanakuli to Waianae, you know what I
18 mean? No need go Kahala, Hollywood, or wherever, you know
19 what I mean? The equitable distribution should go to
20 Navajo country, Apache country, Geronimo's people who had
21 some of that wealth that -- what's that guy that run around
22 with the airplane and wen go rape the people and the guy
23 from Hawaii had to go get him from Mexico? You know what I
24 mean? That kind of insanity of the money that you are
25 trained to protect, not the rights of -- inalienable rights

1 of a human being, but it's for the -- guaranteed flow of
2 income through the rape of resources from Hawaii, Pearl
3 Harbor, Iraq, you know. Now, that Environmental Impact
4 Statement is what you protect, the ability for your
5 employer to rape continuously.

6 Now, if you like come Hawaii fo' Stryker Brigade, you
7 pay me \$500 billion, and we talk. I the kanaka. I the
8 sovereign Hawaiian. You like work on my grounds, we chat.
9 No bullshit now. You pay me 500 trillion billion, million
10 billion trillion billion million billion, so I can restart
11 my country and get all the homeless kanakas off the beach,
12 then maybe we let you go golf up there.

13 But that environment of the world -- okay. I respect
14 soldiers, be one soldier like how the other bruddah, and
15 the thing that bruddah was saying, the hypnotic effect of
16 pledging allegiance to the raper of the world had
17 continued. My grandfather, World War I, my father Third
18 Division, Korea, my First Division Brigade, Vietnam 1969,
19 and it was dusty.

20 Let me tell you, it was dusty. But the point is the
21 environment of the world go, you gonna tell your boss, stop
22 raping the world. Enough. And then -- I don't know, maybe
23 we can go up together sometime. Maybe not.

24 (Applause)

25 MS. AMARAL: Michelle Minchew, Hanalei Fergertstrom,

1 followed by Mark Kiyuna. Michelle.

2 (No response.)

3 MS. AMARAL: Michelle, are you still in the room?

4 No? Okay.

5 Hanalei is still in the room. I see him. Mark
6 Kiyuna followed by -- these things are sticky -- Angela
7 Smith. Aloha, Hanalei.

8 MR. HANAIEI FERGERSTROM: Aloha kakou. My name is
9 Hank Fergerstrom. I'm the chosen spoke person for Na
10 Kapuna Moku O Keawe, which is the gathering of the six
11 major districts of this island. It's a wonderful thing
12 working with Kapuna, but at the same time it's tragic
13 because we've had to do this for our own protection, so
14 I've spoken many, many times on this matter, so you're very
15 familiar with it, but you're not familiar with our
16 foundation papers, and I think it might spell it out for
17 you why we're doing this.

18 Pardon me, my voice is a little screwed up.

19 MS. AMARAL: Then you want to talk real close then so
20 it picks it up easier.

21 MR. HANAIEI FERGERSTROM: Okay. It starts out, Na
22 Kapuna Moku O Keawe. Ke Akua is the spiritual foundation
23 for the Hawaiian Kingdom. We gather this day, May 3, 2003,
24 in Hilo to recognize and affirm our traditional and custom
25 role as Kapuna representing the six districts of Moku Keawe

1 of the Island of Hawaii.

2 We gathered to protect, promote, and preserve the
3 rights of dominion. Inherently the kanaka maoli people of
4 overall matters concerning law, land, water, air, and
5 occupancy throughout the Hawaiian arch.

6 Would the following step forth as district
7 representatives comprising Moku Keawe in our traditional
8 roles as Na Kapuna. Further we pledge our allegiance to
9 the lawful Hawaiian kingdom, to our beloved Queen,
10 Liliu'okalani, and to our founding fathers, Kamehameha I
11 and Kamehameha III.

12 Excuse me. It is our purpose to join in concert to
13 recognize one another as traditional Kapuna representing
14 the districts of Moku Keawe from mutual protection against
15 the onslaught of oppression, destruction, and deceit of the
16 foreign military occupying forces and civilian governments
17 of the United States in the State of Hawaii and its
18 agencies and representatives.

19 It is further stated that the Hawaiian people
20 recognize that we, as subjects to the Hawaiian kingdom,
21 cannot accept posthumously an apology to our Queen,
22 therefore, we must take the responsibility to continue her
23 legacy and hereby notice all government entities, foreign
24 or domestic, that the inherent sovereignty of the Hawaiian
25 people belong to them as individuals, and that no

1 organization, including OHA, Hawaiian Homes, or any group
2 may represent the Hawaiian people without express notice
3 and permission on every matter.

4 I've said this before, but I like to say this
5 publicly; under the United States public law, 103-150, it
6 was your documentation, it was your research, that put it
7 into law that this is a military occupation. That it's
8 illegal. It has been. You folks know this.

9 The State of Hawaii is nothing more than a civilly
10 military occupying force. You talk about saving or
11 protecting the world, but you've afforded us no protection
12 whatsoever. In fact, every time we turn around, you are
13 someplace else destroying something else.

14 I talked about -- before about how it's interesting
15 how open the Army seems to be in this particular meeting,
16 and yet, we know your limitations because as any other
17 soldier, you're subject to command, and so I agree with the
18 woman who spoke about trusting the military. I, too, was
19 raised in military families, and can I trust you? No. No.

20 I know that with military comes all the social wrongs
21 that prostitute our children for the dollar. Military
22 makes a lot of money, but it's bad money. It's worse than
23 drugs.

24 (Applause)

25 MR. HANAIEI FERGERSTROM: As a selected spokesperson

1 from Na Kapuna Moku Keawe, I will say to you emphatically,
2 we do not welcome you here. Now, we've said that, we're
3 not the same Army that we used to be that we just come in
4 and take over, and I challenge you. I challenge you,
5 because I doubt the integrity of the words. Although I
6 know you personally may speak them with integrity, I know
7 that your bosses, the people that are above you, who give
8 these commands have no conscience of such. And as Skippy
9 pointed out, we're a nation and because we're a nation,
10 you're a foreign military occupying force and you're
11 subject to the 1907 hate convention, which you are a
12 signatored party to on military occupying forces.

13 Everything that you're doing here is illegal. To
14 support the State, to take contracts from the State is
15 illegal, so knowing all these things, I can't imagine the
16 gull that you have to even present it.

17 Our people have -- have been run over completely, and
18 you're attacking us on every front that there is. Your
19 Army wants to do Pohakuloa. Pacific missile range wants
20 another 6,000 acres. They want to put the submarines in
21 west pack -- Westloch -- I mean, the aircraft carrier, I'm
22 sorry.

23 What I'm trying to say to you is you ought to try
24 looking from my spot and understand, we're an island.
25 We're an island. We don't have thousands and thousands of

1 miles in each direction to go and blow up what 20 mile or
2 50 mile guns or whatever. Yeah?

3 If you look at it from the top from the eyes of an
4 eagle or eyes of a hawk or the eagle, then you'll see what
5 we're talking about. Are you threatening to me? You most
6 certainly are. Just like Auntie Hannah says, you're
7 killing us. You're killing us with a smile on your face,
8 with open arms, and you expect us not to bleed, and you
9 know, all I can say to you is, gentlemen, if you actually
10 have a power to recommend something, take your Strykers
11 someplace else.

12 It would be much -- this is probably the worst thing
13 you've ever thought of, I guarantee it, because this is an
14 island that will stand. We have two of the most sacred
15 mountains in the world here, and we're certainly not going
16 to let you blow them up.

17 As I told you before -- as I've spoken before, we
18 have the male and the female, and you want to go blow up
19 the womb. Hawaii is about life. Not death. Mahalo.

20 (Applause)

21 MS. AMARAL: Mark Kiyuna followed by Angela Smith
22 followed by Ragu.

23 MR. MARK KIYUNA: Aloha. I was in the Navy. The
24 submarine that I was on three years before was caught up in
25 bugdabushto (phonetical) before I came on. I start to

1 think -- that was on the History Channel in August. I was
2 so surprised to see them reveal something like that, but at
3 that time I was thinking to myself, ho, that's a long ways
4 to go for ohana nui, the Russians. Why you going around
5 the world for make trouble?

6 You know, you got 3,000 miles of ocean on one side of
7 America, 5,000 miles of ocean on the other side. We don't
8 have no military aggression from Canada, never did. And we
9 don't have any --

10 (Applause)

11 MR. MARK KIYUNA: I got five minutes now. I only got
12 five minutes.

13 We don't have any problems militarily with Mexico.
14 In fact, we welcome them, fo' got the cheap labor. So,
15 what's the Stryker force for? Why we gearing up for war?
16 Maybe somebody only thinking about war. Have gun, will
17 travel, right? But I must thank you gentlemen for letting
18 us speak here. You know why? Remember the WTO in Seattle
19 where they never let us speak?

20 (Applause)

21 MR. MARK KIYUNA: Wait. I only got five minutes.

22 So I'm so glad that we get opportunity to say
23 something, because I was thinking, marching in the street
24 getting your head banged in and getting your face sprayed
25 on with the mace and thrown in jail, that not accomplish

1 nothing. But coming up here, we can talk. And you're
2 going to pick and choose the statement you want, and throw
3 the rest out, right? But sometimes some people make sense.

4 So, here you go. We got the ability and all of our
5 missile power and nuclear power to destroy the sun and this
6 earth together, so why the Stryker force? How come we're
7 going to go up into the mountain over here?

8 You talk about jobs, what jobs? I'm a merchant
9 seaman. I spent 30 years on the ocean. I don't need job
10 over here, but my three sons need work. They work for
11 minimum wage. My oldest son is in North Carolina working
12 for minimum wage because over here, no more job. My other
13 two sons working for minimum wage some of the time.

14 You know, this bridges of Hamakua, they get that led
15 abatement jobs going on, you think they hire local kids?
16 It's all Mainland people. You think they want to hire you
17 and pay you over here? Surprise. Surprise. Guess what?
18 As far as job concern, forget it.

19 So we are -- you let us talk. If you listen, no more
20 terrorists. The terrorists have something to say and
21 nobody listening, so they bomb. They getting attention.
22 Listen to me, I'm dying, that's what the Hawaiians say. By
23 the way, my sons are Hawaiian. They got one lot in Paniewa
24 and my daughter got one house in Paniewa, and the other
25 ones no more house, so what -- how this going to benefit

1 the kanaka maoli? How it gonna benefit us? The only jobs
2 gonna come is from the outside.

3 So, you talk about peace, after I say this, I think
4 you gonna burn my house down, because in 1933 Charles Porch
5 wen register at one factory for the carburetor, a
6 200-miles-a-gallon carburetor seventy years ago. In Salt
7 Lake City, they had been driving a city bus, the whole city
8 bus system run on hydrogen fuel. And then as soon as you
9 touch one of these foreign countries, quick the military is
10 over there. I applaud President Bush because he -- Iraq
11 needed to be liberated, but what about Tibet? Chee-hwa
12 Tung killed 50 million people, of his own people, and then
13 he invaded Tibet. We don't even know the atrocities over
14 there. How come we don't know? There no more oil.

15 So, we got to open our eyes to see, open our ears to
16 hear. All these things been going on right in front your
17 eyes. All what I'm telling you is in the newspaper. I
18 don't know no secret connections.

19 So, one last thing I like tell you, plant a tree for
20 your grandson. Don't put a gun in his hand.

21 (Applause)

22 MS. AMARAL: Angela Smith followed by Ragu followed
23 by Nannette Savage. Angela, are you here?

24 UNIDENTIFIED SPEAKER: Can I ask a question real
25 quick? Are you going by the numbers that were on the

1 paper?

2 MS. AMARAL: Yes. This is 17, 18, 19. Yeah. Angela
3 Smith, are you in the room?

4 (No response.)

5 MS. AMARAL: No? Okay. Then we go right past
6 Angela. Ragu, are you in the room? Come. After Ragu is
7 Nannette Savage followed by Kristina Hopkinson.

8 MR. RAGU: When I first read the report, I thought
9 this was going to be something of a friendly input from
10 your community about, you know, touching up the environment
11 a little bit more carefully. I didn't realize that it was
12 going to be quite such a hot bed of passion for Hawaii.
13 And it's been very sobering and very moving for me to hear
14 firsthand the people that I've been -- and the issues that
15 I've been hearing about in passing for so many years and
16 you are getting to face those.

17 And, so, my reaction is is there something of, maybe,
18 a communication gap? I think that many of the people that
19 have spoken had some sense of respect for maybe your
20 personal intentions and hopes in dealing with this issue,
21 and I'm very cautious about how that will translate
22 practically on the ground once the military begins doing
23 these different things.

24 So, in reference to that, I just wanted to suggest a
25 couple of things that I thought you might find helpful.

1 One thing that I realized was that the degree of angst that
2 we're seeing here is representative of a growing number of
3 places the military finds themselves in, and one thing that
4 makes me feel somewhat bad is that the military seems to be
5 picking up a political slack that's actually supposed to be
6 attended to on the political front, but is not.

7 It reminds me a little bit of police officers who are
8 sort of there to take care of criminals simply to find
9 themselves having to deal with family disputes and things
10 that are a far greater degree of gray, and the result is
11 that there's a learning curve that the military pays a
12 price for. And it reminds me somewhat of Vietnam where the
13 gusta that we had after World War II was just to become the
14 biggest, baddest, you know, killing machine. And in
15 Vietnam we realized that there is a certain degree of
16 cultural and moral considerations that had to be abided to,
17 which dramatically improved the military's performance in
18 dealing with very difficult situations.

19 What I'm finding here tonight is that Hawaii is very
20 representative of an occupied country, or to make it less
21 inflammatory, a people somewhat distrustful of the American
22 military. So, in spite of the fact that there's going to
23 be military operations, the U.S. Military's biggest job
24 isn't actually on the war front. That's probably its most
25 glamorous, but it's in, as we called it with Iraq, winning

1 the peace. And Hawaii provides a very special -- a very
2 special forum for learning how to do that. So I know that
3 so many places provide ample opportunity in the country to
4 learn military combat, but Hawaii is one of the few places
5 that will offer this firsthand experience, and as we're
6 seeing in Iraq and we will see in the years to come, that
7 learning to win the peace is very, very essential.

8 And, so, I say this not so much as a plea, but maybe
9 as part of the rhetoric that you can use to take back to
10 translate the issue to your superiors, because if you
11 can -- if you can't settle it here, we will pretty -- be
12 pretty much hopeless anyplace else. So, I just wanted to
13 say that.

14 Really the reason why I came here is that sometimes
15 in the process of trying to protect, we damage that which
16 we even, in a best case scenario, cherish, and the problem
17 with Hawaii is there's only one of them. And once we --
18 once it's decimated, it's pretty irreplaceable, almost any
19 other part of the world. So, if protecting -- protecting
20 the American way was the military -- protecting the
21 American way is definitely sort of the American -- is the
22 military logo, but you found yourself in the position of
23 having to protect the Hawaii way, and I think that's a good
24 thing.

25 Thank you.

1 (Applause)

2 MS. AMARAL: Mahalo. It's my understanding that
3 Angela is now available. Angela Smith, followed by
4 Nannette Savage, followed by Kristina Hopkinson. Angela.
5 You said she's back, yes? She left the room again. All
6 right. Nannette Savage followed by Kristina Hopkinson
7 followed by -- oh, Angela?

8 MS. NANNETTE SAVAGE: No, Nannette.

9 MS. AMARAL: Oh. Welcome, Nannette. Come.

10 MS. NANNETTE SAVAGE: Thank you for this opportunity
11 to speak. There's been so many emotional testimonies here
12 it's -- I'm blown away, and I'm so very grateful for
13 everyone that speaks.

14 I -- it can't be said enough that Hawaii is the most
15 militarized state in the union, and it's so small. And
16 it's just -- why is it so militarized? Because of it's
17 location. We all know that. We're in the middle of the
18 Pacific Ocean. This is a great spot to take off from, and
19 it's so saddening to me. It really hurts me. It hurts
20 these beautiful Hawaiians, and I really have to make it
21 clear that I'm against this land acquisition.

22 I also come from a military family, and I saw the
23 damage that it did to my -- my brothers and my father. War
24 is a horrible thing. And preparing for it, is no better.
25 Please believe me.

1 (Applause)

2 MS. NANNETTE SAVAGE: This land is bleeding from all
3 that you've done to it already, and the people are
4 bleeding. Please, at least make it known that this is not
5 wanted, and please know for yourselves this is wrong. War
6 is wrong. Military is wrong. Self defense is fine, but we
7 haven't been doing self defense for a long, long, long
8 time. We've been the aggressor, and as someone before me
9 said, you are the policemen of the oil companies that want
10 all that oil. We don't need that either.

11 Please don't do this. That's all I have to say.
12 Thank you.

13 MS. LEE: Kristina Hopkinson followed by Marc
14 Lindshield, then followed by Elizabeth Lee.

15 MR. BEN SIDEWAYS: Hello. My name is not necessarily
16 Kristina, but call me as you please. Hello.

17 MS. AMARAL: Let me ask you a question. Are you
18 replacing Kristina?

19 MR. BEN SIDEWAYS: Yes.

20 MS. AMARAL: For the record, could you identify
21 yourself, please.

22 MR. BEN SIDEWAYS: My name is Ben Sideways. Hello,
23 my friends, all of you, my family. Okay. One, thought,
24 what was sacred is lost. What is sacred is for sale.
25 While growing up and being educated in America, I learned

1 that anything could be bought and sold. I learned that
2 those who destroyed did so for freedom sake. I learned
3 that God was on our side, the true side of justice. I
4 learned that those with blood-stained hands were the real
5 American heroes. I learned that America was the land of
6 the beautiful.

7 When I came to Hawaii, I saw why America was the land
8 of the beautiful. I saw what was sacred has not fully been
9 lost. I saw the sacred empty ocean at our door step. A
10 doorway that connects us to the rest of the world. I saw
11 the sacred sound of endogenous birds between mountaintops.
12 I saw the sacred shades of green jungle waving in the wind.
13 I saw the sacred birth of earth from the most ancient fire.
14 I saw the sacred valleys where ancestors echo. I saw the
15 sacred womb where Mauna Kea and Mauna Loa meet to become
16 one; one like you and me, one like human and earth, one
17 like all life. And if the sacred is sold and the bombs of
18 barbed wire are brought here, you will not only be bombing
19 Hawaii, you will be bombing yourself, you will be bombing
20 your children, and you will be bombing your soul.

21 (Applause)

22 MS. LEE: Marc Lindshield.

23 MR. MARC LINDSHIELD: Thank you and good evening.
24 I'm glad I get the opportunity to speak before everyone
25 will be saying good morning.

1 First of all, I'd like to point, as I humble before
2 you -- first of all, I'd like to say good evening and
3 Aloha. My name is Marc Lindshield. I come here four
4 months a year to rejuvenate and recharge my batteries from
5 the spirit of Aloha.

6 My background is native American. Not native
7 Hawaiian, however, my heart -- the core of my heart is
8 Hawaiian, and to that, to everyone in here who has shared
9 deeply with me, I say mahalo.

10 I'd like to point out that I'm not here to bash the
11 military, and that I accept at a certain level the
12 necessity of some type of military presence. However,
13 there's a few things that I'd like you, Colonel, and the
14 Lieutenant Colonel to consider this evening.

15 First of all, the U.S. Government controls a greater
16 percentage of the Hawaiian Islands than any other state in
17 the nation. What it's done with that is degrade, trash,
18 and destroy, and to a certain degree, in the name of
19 protecting our country, that's not protecting our country.

20 (Applause)

21 MR. MARC LINDSHIELD: I have written a specific
22 request to your report, and I expect an answer, but the
23 request is have you considered a joint use of many other
24 military bases that would offer you the opportunity to do
25 your testing, your proving, and your training without

1 further degrading this beautiful island?

2 The second thing, I live in San Diego. The rest of
3 the time of my life I live in San Diego when I'm not
4 traveling for work, and I'm surrounded by military. There
5 are thousands, upon hundreds of thousands of acres where
6 you can do your proving and training.

7 When I read parts of the report that suggested that
8 this expansion would increase and expand the economy in the
9 Hawaiian Islands, I choked. I live in San Diego where most
10 of the young families that work for the military service
11 who earn such meager pay that they are on food stamps.
12 They are not the ones living in \$200 a night rooms here.
13 They're not supporting the airlines, and they're not taking
14 air tours, so that was a joke. And I highly recommend that
15 we revisit that.

16 The Akaka bill in general is the Trojan horse of the
17 21st century. It is dressed up in such a manner to appear
18 as a gift to you people who have given your lives for this
19 great land. It is a Trojan horse. It is a weapon to be
20 used against you. Wake up.

21 We are here tonight to give public comment, but I'm
22 telling each and every one of us here what we are doing is
23 giving ammunition to these people's superiors. We are
24 showing our hand as to what our concerns are so that they
25 can take this project back, dress it up and put fresh

1 lipstick on it and then re-present it to us in a manner
2 that they think we will accept. Do not accept it.

3 Jobs -- you want to talk about jobs in the military,
4 a couple of people have mentioned the military jobs that we
5 could give to our kids. Maybe if they're going to be
6 buying their things at Wal-Mart, but not if they're going
7 to be stimulating the long-term economical advantages that
8 this island has. The State of Hawaii is a global tourism
9 mecca.

10 I -- in the Mainland people do not go to Wisconsin
11 for the cheese. They do not go to Florida to taste the
12 oranges. They do not go to Vermont for maple syrup.
13 However, in and around the world, they come to Hawaii for
14 one thing. That one thing is the spirit of Aloha. It is
15 the culture that you people have, and if you don't wake up
16 and if you don't start defending that today, it will die.

17 I am speaking to you now, I am speaking to the media.
18 It is a time I am calling to arms this evening, here,
19 today, and I flew in from San Diego yesterday to do it. My
20 heart is here. My spirit is here. It is the culture. The
21 Aloha. It is the time to come together now, because if we
22 don't, we lose the opportunity. Do not allow the Aloha
23 spirit to be overcome by the Trojan horses before you.

24 Norwegian Cruise Lines has invested billions of
25 dollars into two new ships that will do nothing but circle

1 these beautiful, pristine, and sacred islands. Now, I'm
2 not going to discuss the nuances of the cruise industry,
3 however, they have recognized it and turned it into a
4 marketing mecca and staffed it with native Hawaiians
5 because they recognize one thing, your heart, your soul,
6 and the spirit that you share with everyone from around the
7 world cannot be bought at any price. And if you don't
8 start recognizing this in the school, recognizing it in
9 your hearts, then it's all been a waste, and the people and
10 the ancestors that came before you have died for nothing.

11 Unless the Hawaii State Department of Tourism plans
12 on changing their motto from the "Islands of Aloha" to "Get
13 Bombed in Hawaii," we have a serious concern. Now, it may
14 appeal to a certain small number of college revellers, but
15 not to the families.

16 Colonel and Lieutenant Colonel, one major point that
17 I'd like to make in my closing here. A number of the
18 people in the press has cited you as good neighbors. If
19 you were my neighbor and I invited you to my home for a
20 barbecue and you left behind ordnances in my backyard, and
21 I called upon you to clean them up, and even reached into
22 my pocket and gave you over \$400 million to do it, and you
23 were incompetent to do so, you would not be considered a
24 good neighbor in my home. They must be cleaned up before
25 they kill our children and our visitors.

1 And the other thing that I will share with you, if I
2 ever, ever hear of a public meeting being held in private
3 resorts and people being deprived of their First Amendment
4 rights that you gentlemen say you defend, I will be here
5 with my legal team and the ACLU, and if you understand what
6 I'm saying, we will jump so thoroughly into your legal
7 briefs that you will not forget it for many years to come.
8 I understand you have a job to do, but let's do it fairly
9 and appropriately.

10 You, people of Hawaii, thank you for sharing your
11 lives, but don't forget where you came from. Reach back.
12 This is a call to arms. Gather behind us today and the
13 people who protect this. Get out there and recognize what
14 you have, what I can only have as a guest, and protect it
15 now. Do not allow this Trojan horse to get through the
16 gate. Mahalo.

17 (Applause)

18 MS. LEE: Elizabeth Lee Lay. Elizabeth Lee Lay.
19 Elizabeth Lee Lay.

20 UNIDENTIFIED SPEAKER: Loy.

21 MS. LEE: Loy, I'm sorry. I apologize. I misread
22 the handwriting.

23 MS. ELIZABETH LEE LOY: Aloha. Thank you very much.
24 I hadn't planned to speak, but the more I thought about it,
25 I thought, no, I had better say something.

1 I'm a mother of twelve children. My husband is
2 tired. He had to go to the car to sleep, and I have -- of
3 those twelve, four boys were in the military, my two
4 brothers, my three sons-in-law, my eldest daughter works at
5 Pearl Harbor, and has been there many years. Her departed
6 husband was in the military, and I may have forgotten a
7 few, but I am adamantly opposed to any more military in our
8 island or our state.

9 (Applause)

10 MS. ELIZABETH LEE LOY: Thank you. I have never been
11 to the Mainland. I don't care to go, but I have heard from
12 a number of sources that there's so much land there, land
13 of the free, land of the brave. But I don't want them
14 here. I grew up on Oahu, and as our deep friend Steve
15 Tayama mentioned to me or us, Kalihi, that was part of my
16 roots, and we were a tough neighborhood. Like auntie over
17 here from Kona, I'm also aloa ali'i from Kona so, on the
18 Perde side, okay, but not for okuma ohana right now.

19 The thing is that we need to pay attention, and it's
20 not that we need those jobs. There are many nice jobs, and
21 we're only here for a short spill. Let's make the best of
22 it and let's be kind to everyone, and to behave, to be a
23 good example and that's true.

24 The military has left a bad record. I grew up on
25 Oahu, as I said. I know what happened at Schofield. I

1 know what happened at Makua. They had kanaka maoli, they
2 had plenty families there, and the military came in a
3 little while, mosey on in, meandering on in, and they never
4 packed up to leave. And we've had all that additional
5 fires with the military there. What? They couldn't see
6 the fire or was it deliberate to extinguish the -- you
7 know, the plants, the herbs, and things?

8 So, we have to also make sense of what we do, and
9 again, I felt -- my dear friend was with Steven over there.
10 When I saw that TV coverage, my dear friend Kekuni
11 Blaisdell, was having his hands also tied by the -- sorry,
12 but there were some Hawaiian boys who were doing their job.
13 So I thought, we were a communist country at that point in
14 time.

15 Then three days later we see the sweet little
16 military woman saying that, oh, we've been nice with our
17 neighbors, getting along. I don't think so. That was not
18 the truth.

19 And mahalo a nui loa and malama pono, a hui hou, and
20 I thank all of those that stood before me, most of them
21 anyway, that gave -- enough of the military. I thought
22 there was two or three that want to have military, but I
23 love them. In fact, some of them -- one or two are married
24 to my family, but the point is, let's behave ourselves.
25 Let's start with us. We don't have to look dignified,

1 polished, and standing straight and tall, behave because
2 we're all going to give an account some day. Mahalo a nui
3 loa. You can hear me?

4 (Applause)

5 MS. LEE: Okay. We've got one more speaker coming
6 up. Can you hear me? Then we need to take a short
7 announcement. We've got some sound issues with the guests
8 that are right upstairs, so we'll talk about some possible
9 solutions for that, and then we'll break for a few minutes.

10 So, first we're going to have Donna Ashizawa, please
11 come up. Donna.

12 MS. DONNA ASHIZAWA: Aloha. Mr. Borne, Colonel
13 Anderson, Lieutenant Colonel Clarke, and the missing panel
14 member, Donald Rumsfeld. I'm here tonight not representing
15 any particular race or people or nation, but as a human
16 being. I am a human who wishes to reside in an environment
17 of serenity and beauty, and in a place that is not only
18 safe for humans to live, but also safe for endemic and
19 endangered plants and animals to thrive.

20 Does Pohakuloa Training Area remind you of such a
21 place? Will an expansion and importation of 19-ton
22 vehicles enhance its beauty and serenity? Will it be safe
23 from unexploded ordnance and toxic waste for at least
24 generations to come? Of course not. At least not
25 according to the environmental impact tone distributed by

1 the U.S. Army Corps of Engineers.

2 My fellow human beings, you may believe that this
3 so-called transformation is an exciting and necessary
4 project. Please, when you have a quiet period to yourself
5 in a quiet place, not at the training areas, for example,
6 I'd ask you to breathe deeply and calmly ponder, the
7 ramifications of your actions, and may your decisions not
8 be based on acquiring a big juicy project, on promotions,
9 on political endeavors. May your decisions not be based on
10 prestige, on pride, on just carrying out another order.
11 May your choice between accelerating the current levels of
12 environmental degradation by the military or restoring the
13 land to its original, natural beauty, between trampling
14 over historical cultural sites or honoring the ancestors of
15 those who live here, and your choice between increasing the
16 hazards to our mutual health and safety or achieving the
17 overdue cleanup of the countless existing unexploded
18 ordnance and toxic waste sites. May your choices come from
19 deep within your hearts as a human being.

20 Please reconsider the expansion project. I did look
21 at parts of the EIS. So far, as you can see, on Page ES
22 28, Table ES 5, I think Auntie Tutu referred to it earlier,
23 the project's negative impacts far outnumber the beneficial
24 impacts. Take a look at that table, please. Why would the
25 Government even think about doing something with so many

1 negative impacts on our air quality, our land use, our
2 water resources, our soil erosion, our biological
3 resources, cultural resources, and our human health and
4 safety hazards?

5 Here are just a couple of examples of just the noise
6 impacts that I looked at, and also please refer to the
7 testimony given by Mr. Bigelow last night from Waiki'i
8 Ranch Homes. He addressed the need to change certain noise
9 impact levels to significant, and I agree. He would know,
10 he lives adjacent to the current training area.

11 On Page 431 and 432, quote, Noise levels from weapons
12 firing and ordnance detonation would cause noise levels to
13 exceed the Army's acceptable noise level criteria, MPTA.
14 The use of blanks and other training munitions would
15 produce peak decibel levels in the zone two range -- I'll
16 explain that later -- at the Waiki'i Ranch and Kilohana
17 Girl Scout Camp, and might also lead to zone two noise
18 conditions at the Mauna Kea State Park Rental Cabins.

19 Table two on Page H 23 lists zone two level as
20 normally unacceptable and that 15 to 39 percent of the
21 population would be highly annoyed. It's right there.
22 Further it's stated that, quote, These noise exposure
23 conditions would be a significant noise impact, unquote.
24 That right there means stop. Do not pass go. Do not
25 collect \$1.5 billion.

1 One last point, on Page 434, quote, Maneuver
2 activities would be expected to produce hourly average
3 noise levels between 55-weighted decibels to 70-weighted
4 decibels. These weighted things just kind of lower the
5 numbers actually. The examples of these levels are given
6 as, for the 55, typical urban residential area noise, to
7 the 70 decibel, 300 feet from a busy six-lane freeway.

8 What is not described are the psychological effects
9 of hearing, not the sound of a freeway or urban noises, but
10 rather the constant sound of being in a war zone. The
11 sound of people who are training to kill other people.

12 Please, breathe deeply, think clearly, and envision
13 an alternative to the inhumane treatment of this land and
14 all the creatures upon it as a human being. Mahalo.

15 (Applause)

16 MS. LEE: Okay. Ten o'clock in a hotel is a magic
17 hour when guests get some quiet time, if at all possible,
18 so the hotel staff has asked us to think about what we can
19 do to make it okay for the floors right above us to get
20 some shut-eye, and I've thought of a few options.

21 One is if we can lower the volume of our sound
22 system, but the way that would work, though, is to have
23 everyone come as close forward as possible rather than be
24 spread out, then we can kind of keep the noise up here. We
25 might need to shut some doors. We might need to cut down

1 on the clapping, too.

2 I think if we do everything that we can to try to
3 keep it down, the hotel management will be fine with us,
4 otherwise, they'll come and pay us another visit and we'll
5 see what our next level of action will be. So, I ask you
6 to think about it during a ten-minute break. We'll come
7 back at ten o'clock, we'll start over, and our next speaker
8 will be Jon Evans followed by Jon Orson, I believe, or
9 Olson. Okay. Ten-minute break, please.

10 (A recess was taken from 9:50 p.m. to 10:00 p.m.)

11 MS. LEE: We made an announcement that -- to try and
12 cut down on the sound, we had shut down the external or the
13 exterior seating area, so if you're out there and you want
14 to know what's going on, please come in. I would still
15 suggest that we try and cut down on the clapping, if at all
16 possible, but if you are so moved, I can appreciate that.

17 So, let's get our panel here, including our Colonel.
18 All right. We've got Mr. Jon Evans followed by Jon Olson
19 or Orson who will be followed by Jim Albertini.

20 Mr. Evans, please come forward.

21 MR. JON EVANS: Aloha, everybody. I'm going to try
22 to make it really brief just because it's already been so
23 long. I testified last night. My comments, I assume, have
24 been recorded.

25 Mililani was up here, she noted or she said that

1 there is no plan to clean up, and I just wanted to let her
2 know that there is something. The Army Corps of Engineers
3 under a federal used defense sites label is cleaning up
4 Hawaii at an astounding rate, and it's astounding because
5 by their own admission, the rate that it's being funded by
6 Congress it's going to take hundreds of years. That's
7 their words, hundreds of years. Somebody tells you this,
8 that they're going to come to your house and help you clean
9 your yard, but it's going to take hundreds of years, you
10 don't really believe that they intend to help you, and I
11 think that's what we have here is kind of a crisis of
12 confidence, and of course, you've heard this expressed.
13 I'm boring you.

14 But I think it's great that we have Army officers
15 here and we're still able to speak our minds, you know. We
16 want sovereignty. We want the great injustices to be
17 thrown off and we're still able to say it. That's
18 wonderful. That's wonderful, and I pray you guys will take
19 seriously protecting people's rights to say stuff like
20 this.

21 I feel we live in a chilling environment. I'm afraid
22 of my Government, but I'm here because all you guys are
23 here to kind of, like, back me up. I don't want to be
24 afraid. I grew up loving George Washington, thinking
25 Abraham Lincoln and all these guys were the really good

1 guys. You know, again, in their time they may have had the
2 best of intentions and tried to do the best thing, but
3 we're living in an age where we know more, we got to do
4 better.

5 The idea that the Army can just continue to destroy
6 Hawaii, and incidentally, please find someone who's read
7 the Environmental Impact Statement. We're talking
8 destruction here of the soils up there. Destruction has
9 taken place at Pohakuloa, irretrievable, unrepairable
10 destruction has already taken place, and the impact
11 statement, if it's true, Chapter 8, read 'em on soils,
12 they're promising to destroy some more. It's unavoidable
13 doing what they're doing, and there is no renewal. There
14 is no reconstruction. There is no way to restore the kind
15 of environment up there on the crusty lava. Once you run
16 it over, it's gone. You cannot paste each little piece of
17 dust back together.

18 It's an environment for life. When you run 'em over,
19 no more life, no can be over there ever again. I'm going
20 to just cut it short at that point just for everybody's
21 sake and for the people upstairs. I hope you guys getting
22 some of this testimony. Aloha, and sovereignty. Right on.

23 (Applause)

24 MS. LEE: We have another Jon, Jon Olson or Orson.

25 MR. JON OLSON: Olson.

1 MS. LEE: Thank you, sir.

2 MR. JON OLSON: Thank you. Good evening. These
3 public testimony things are always a journey. Kind of a
4 side from what I really came to say on a personal level, I
5 have a few things.

6 Yet listening to the testimony here, it came to me
7 that as a voter in this country, I owe you gentlemen an
8 apology that I have allowed the people so devoid of
9 character to not -- to hold high elective and appointed
10 office, and I apologize to you for that. I will try to
11 correct that in the next election.

12 If I may, I could find no maps that delineated the
13 new Saddle Road extension in your document, which isn't to
14 say they're not there. I just haven't found them. And
15 there is no verbiage that I have found that describes the
16 impacts that your proposed expansion would have on the new
17 Saddle Road alignment.

18 This is a significant enhancement to transportation
19 on this Island. It's taken many decades to get this funded
20 to the point that it has, and I would appreciate it that we
21 would find some manner to describe to us all how -- what
22 you propose would impact that. That's my Puna traffic
23 safety hat. I'm the current chair of Puna Traffic Safety.

24 One of the other things I do with my free time is I
25 teach sailing for the Y. Your use of Kawaiahae Harbor as

1 it is now delineated has your landing area on the south
2 side of the harbor, and if you remain there, the
3 necessities of homeland security and your own security is
4 basically, I believe, going to end up closing the entire
5 harbor to all recreational use along with the recreational
6 harbor and the recreational sailing facility opposite your
7 facility on that point of land.

8 We have two facilities for recreational boating on
9 that side, and only one deep water facility over there,
10 which is Kawaiahae Harbor, so that would be a serious loss
11 to our little community here in terms of recreational
12 facility.

13 I am wondering if there is going to be another such
14 meeting as this for a couple of reasons. One is that,
15 obviously, a number of issues have been raised to which
16 your document does not have an answer, and whether that is
17 going to be -- this document is going to be redrafted and
18 resubmitted for public commentary, and I will tell you that
19 I object in the strongest way the fact that you -- not you,
20 but that your organization has chosen to hold this in this
21 type of a venue; that is, to say the least, chilling in
22 terms of public participation.

23 We are being asked to change our rights to this kind
24 of a meeting. You know, this is -- I'm the 25th speaker
25 here. It's 10:30. We certainly -- you certainly could

1 have started this at a much earlier time, and many of the
2 people who would have voiced their opinion, obviously, they
3 have families, they have children, they have jobs. There's
4 a whole lot of things that go on in people's lives. So
5 with that, I'll let the next person. Thank you.

6 MS. LEE: A reminder that -- let's see, we have about
7 36 or 7 more speakers to go. If you don't want to hang out
8 with us all night and morning, please do visit the court
9 reporter who is sitting in the back, who will be very happy
10 to take your comments verbatim, and I've also been helping
11 people who are handing me their written comments, which is
12 just fine as well.

13 Our next speaker is Mr. Jim Albertini.

14 (Further proceedings were had on the following page.)

24

25

1 MR. JIM ALBERTINI: Aloha. My count is
2 twenty-three people against, two in favor. Make it
3 twenty-four again.

4 In the kanaka maoli tradition, we're entering
5 the makahiki season. It's a time for thanksgiving and
6 peace. Tonight, I am very thankful for all the people
7 that have spoken out tonight and last night at the Kona
8 hearing over at the Waikoloa Beach Marriott Hotel. You
9 know, last night's hearing was really moving to me. It
10 was the large and powerful turnout and testimony that was
11 led by the kanaka maoli, kupuna, the makua, and the 'opio
12 speaking on behalf of their ancestors, their ohana, and
13 the aina to stop the military expansion, to call for
14 cleanup of the existing military opala and the return of
15 the land to the sovereign nation of Hawaii. It was
16 really a chicken-skin evening.

17 The testimony of the non-kanaka maoli was also
18 very moving. In all, a total of about forty to fifty
19 people testified, and only about four in support of the
20 expansion. And from what I've read and heard, this is
21 how the other hearings have been going, as well: People
22 overwhelmingly opposed to military expansion despite the
23 climate of fear it's been creating through this EIS
24 process.

25 And last night I spoke about the shamefully

1 flawed process of this EIS, the private,
2 by-invitation-only wining and dining of politicians and
3 select business people at the exclusion of the public,
4 conducting select tours of Pohakuloa for political and
5 certain business people while cancelling at the last
6 minute a tour by kanaka maoli, sovereignty leaders,
7 environmental and grass roots community representatives,
8 saying certain unnamed members of the delegation were
9 unacceptable because of their outspoken criticism of
10 military expansion.

11 Having the exclusive private country clubs and
12 luxury hotels as settings to intimidate and distance
13 ordinary people from participating in the process, using
14 police, private security firms, and hotel security as a
15 fence to block and arrest citizens from attending public
16 hearings because they peacefully carry protest signs, the
17 banning of signs as a peaceful expression of free speech
18 testimony, and arrests at the first two of six public
19 hearings throughout Hawaii, tainted the entire public
20 hearing process with a chilling effect on participation
21 and expression. So tonight I call on the Army to lead
22 the way to drop the charges against my friend
23 Steve Tayama and the other six people who were expressing
24 their Constitutional right. Speak out yourselves to have
25 those charges dropped.

1 On Tuesday of this week I spoke to a class at
2 the University of Hawaii in Hilo, and scared students
3 asked, quote, Will we be arrested if we go to the
4 hearings, end quote.

5 Now, what kind of a climate is that for a
6 university and a community?

7 On Tuesday, Hilo police captain called my home
8 and asked a member of my household if Mr. Albertini was
9 planning on being arrested at the Stryker hearing.

10 What kind of a message is that?

11 Several federal workers told me that they're
12 afraid to get involved and speak out on the Stryker issue
13 or even be seen at public hearings like this. They fear
14 they could lose their jobs just by being here.

15 What kind of a working environmental impact is
16 that?

17 Earlier in the week, a Waikoloa Beach Marriott
18 Hotel security officer left a message on my home
19 answering machine, that anyone carrying a protest sign
20 should not enter their hotel through the main lobby but
21 go through the loading dock.

22 What kind of an insult is that?

23 Reminds me of blacks not being allowed into
24 restaurants and told to go around to the kitchen door to
25 eat.

1 I left a message on the Marriott security phone
2 that such a request was insulting and demeaning, and I
3 would not be a party to it. Fortunately, the Marriott
4 backed off of its back-door position. But even their
5 handout in the parking lot to everyone attending the
6 hearing said, quote, Picketing, sign-waving, chanting, or
7 any other public displays of protest is not allowed on
8 any part of the premises of the hotel, including but not
9 limited to the lobby, in front of the property, or the
10 beach front, end quote. This is at a public hearing.

11 So what has been accomplished by the Army's
12 attempt to privatize, ban signs and chants, and arrest
13 people holding signs at public hearings?

14 I have a few observations. One, the Army
15 exposed and demonstrated its contempt for dissent and
16 trampled on the very Constitution it has sworn to uphold
17 and protect.

18 Number Two, the Army showed its complete lack of
19 understanding and respect for citizens' Constitutional
20 right of peaceful express, right to assemble, and right
21 to petition government for a redress of grievances.

22 Three, the Army provided unintended publicity on
23 free speech issues in the Stryker EIS hearings.

24 Four, the Army caused a chilling environment of
25 fear in our community for people to even attend these

1 hearings.

2 Five, the Army, by banning silent, peaceful
3 expression of protest by signs provoked a climate for
4 verbal protest and confrontation.

5 Now, through all of the above, the Army, the
6 Honolulu Police Department, the Royal Guards Security
7 Company, Honolulu Country Club, Helemano Plantation,
8 Hawaii County Police Department, Waikoloa Beach Marriott
9 hosting these public hearings so significantly tainted
10 the environment for open, public participation that the
11 entire process, in my judgment, of public hearings should
12 be redone. The climate of duress created for these
13 public hearings is evidenced by university students
14 asking, Will I be arrested if I go to the public
15 hearings?

16 Public hearing should be held in public places,
17 community centers, and schools. Even Governor Lingle
18 told you this.

19 The biggest land impact in your Stryker proposal
20 is here on Hawaii Island, the 23,000-acre expansion at
21 Pohakuloa, yet you only scheduled two hearings on the
22 entire island. Oahu had four hearings, and all of Oahu
23 can fit inside of the Puna district. There should be a
24 minimum of five hearings on Hawaii Island: One in Hilo,
25 one in Kailua-Kona, one in Waimea, one in Puna, and one

1 in Ka'u. And if the people of Hamakua and North Kohala
2 and other areas want public hearings, too, so be it.
3 After all, you said you want to hear the concerns of
4 ordinary people. Isn't that right? Not just the
5 concerns of your by-invitation-only politician and select
6 business dinner guests who support your pork barrell
7 project that they -- because they get fed at the trough
8 of that pork barrell.

9 The Hawaii Stryker Brigade proposed budget
10 that's been mentioned tonight is 1.5 billion dollars.
11 That's what it costs to run the entire Hawaii public
12 education system for two years. So ask the people of
13 Hawaii what they'd rather, a Stryker Brigade or a
14 doubling of the state school budget to educate our
15 children for the next two years, and let me know what
16 answer you get.

17 I have more questions, but I want to preface
18 them.

19 Many people believe the Hawaii Stryker Brigade
20 is a done deal, that these hearings are a fraud, a facade
21 to give the appearance of listening to the people when
22 the decision has already been made. Dan Inouye has said
23 that he's been assured of the Stryker Brigade. He's
24 already pushed through Congress over 80 million in
25 support of the Hawaii Stryker when the Draft EIS hasn't

1 even been completed.

2 Isn't that putting the cart before the horse?

3 I want to know, who assured Dan Inouye of a
4 Hawaii Stryker Brigade?

5 More questions: Why is it that the military
6 gets all the money and land at once and kanaka maoli die
7 on the waiting list to get what is rightfully their home
8 land, much of which is being occupied and bombed by the
9 U.S. military?

10 I have been made aware of a shocking and damning
11 new Army recruiting ad that shows an Army engineer
12 blowing up Pohakuloa.

13 What's the message you're trying to convey to
14 young recruits by that ad?

15 And let's follow the money, the money trail of
16 this corrupt Stryker boondoggle. Dan Inouye and
17 Ted Stephens of Alaska sit on the powerful Senate
18 Military Appropriations Committee.

19 Any wonder why in Alaska are sites for Stryker
20 Brigades?

21 The Stryker is the baby of Hawaii's recently
22 retired Army general, Eric Sinseki. Sinseki, rumored to
23 want Dan Inouye's Senate seat, was the Army's top general
24 for four years. The auditor of the Stryker program just
25 happened to be a four-year classmate of Sinseki at West

1 Point. One of Sinseki's right-hand men was General
2 David Heebner, who retired early from the Army but
3 immediately got a job as vice president of General
4 Dynamics to seal the Stryker deal between General
5 Dynamics and the Army. Heebner had his Army pension
6 sweetened by over 13,000 shares of General Dynamic stock.
7 And I'm sure the perks have not been made -- and I'm sure
8 he's received other perks that have not been made public.
9 This is probably only the tip of the iceberg.

10 In dealing with the military money and power,
11 much is often hidden. Take, for instance, the secret
12 chemical, biological, and nerve gas testing in Hawaii's
13 past, including right here on this island. The military
14 lied to us about it. They said they were doing weather
15 testing. When the secret testing was finally confirmed,
16 the military acted like they were doing us a favor by
17 telling us that they poisoned us and the aina.

18 Can the military be trusted today?

19 I support the others who say no. Its track
20 record is terrible. The military has more than 50
21 current and former sites on this island of military opala
22 in need of cleanup. It totals more than 400 square
23 miles, the equivalent of nine Kaho'olawes, littered with
24 a toxic stew of unexploded ordnance, chemicals, and
25 biological agents from current and past training.

1 All of our mothers have taught us to clean up
2 after ourselves; Don't even think about making a new mess
3 until you've cleaned up your old mess. And the Army
4 Corps of Engineers says at present funding levels, it
5 will take centuries to clean up the opala of military
6 sites in Hawaii. Yet, somehow, amid budget constraints
7 for cleanup, the Army has found the funds to clean up
8 unexploded ordnance from its new 30-mile tank trail from
9 Kawaihae to Pohakuloa. This is not acceptable. You can
10 clean up tank trails of unexploded ordnance; but places
11 where people live, work, and go to school have the bombs
12 remain. A'ole. Your mother, all of our mothers, and the
13 mother of us all are telling us to clean up, not build
14 up. No military expansion in Hawaii. No Stryker
15 Brigade.

16 Now, Colonel Anderson and the rest of you, you
17 appear to be men of integrity, and I ask you to act on
18 that integrity. Stand up here now and say at this
19 hearing, the closing hearing, based on the overwhelming
20 testimony you have heard throughout Hawaii, that you will
21 recommend that the entire Hawaii Stryker Brigade project
22 be cancelled and put in the scrap heap of history. And
23 that, furthermore, as a first step toward cleaning up and
24 returning current and former military lands to the Nation
25 of Hawaii, you will immediately begin to place thousands

1 of signs such as these around the former and -- present
2 and former bombing ranges and other military hazard areas
3 on the island so that people can simply be alerted to the
4 hazards that surround them. This sign reads, "Caution.
5 Former military site. Live arms hazard." By the Army
6 making and posting these simple signs, it will be a small
7 but positive first step toward -- after you have banned
8 signs from these hearings. So I think you need to make
9 some amends, and you've got to begin right here tonight
10 in the form of an apology and saying that it's your
11 personal recommendations that the entire Stryker project
12 for Hawaii be cancelled.

13 Mahalo and aloha. Malama pona. Malama o ka
14 aina.

15 MS. LEE: Is Cory here? Cory?

16 Aloha.

17 Following Cory will be Alana, and then
18 Joe Watts.

19 MS. CORY HARDEN: I'm Cory Harden, Pohakuloa
20 (inaudible) Coordinator for Sierra Club, Mokuloa Group.

21 I applaud the Army for extending the comment
22 deadline to January 3 because there are many serious
23 concerns about expansion, and that will allow more time
24 for the public to learn what's going on and to make
25 comments. On January 3, there will still, however, be

1 unexploded ordnance and other hazards left on the more
2 than 50 old military sites scattered all over our island,
3 that will take centuries to clean up; and this is not
4 acceptable. Sierra Club's position is that the military
5 should not take any new land until all the old sites are
6 cleaned up.

7 There will be other people that have spoken
8 about the old sites and will talk about them, so I need
9 to speak about the EIS process.

10 Sierra Club also thinks that the EIS process is
11 flawed to the point that we are asking the Army to set up
12 a question-and-answer session to respond to the many
13 serious concerns we have about the EIS and this project.

14 The first flaw with the EIS project is that the
15 public has been prevented from participating in the EIS
16 process. People have talked about that. The arrests in
17 Honolulu for carrying signs, which were allowed in
18 previous meetings, the arrests violated civil rights and
19 have a chilling effect on others who have well-founded
20 concerns about the Army plans.

21 Jim has talked about the private expansion
22 meetings. There was also an unpublicized press
23 conference in Hilo in October. This all went on despite
24 citizens protesting the need for open meetings. The tour
25 at Pohakuloa that was abruptly cancelled, with

1 unacceptable people who were never named.

2 Also, I asked for a disability accommodation for
3 this meeting; it was not provided. I asked in March. I
4 asked for a well ventilated room, such as a school, which
5 would have avoided the problem with being in a -- you
6 know, a private place. I also asked again October 1st,
7 and the request was not granted. So we don't have to be
8 here. In March already that could have been changed.

9 The second flaw with the expansion is the
10 done-deal aspect, which several speakers have addressed.
11 Months before the Draft EIS came out, the Army announced
12 that fire and emergency service would move from Kilauea
13 Military Camp to Pohakuloa, and the letter says the
14 decision is directly related to the increased workload
15 associated with PTA's transformation plan. Money was
16 already in the military budget, and Senator Inouye was
17 saying he was assured Hawaii would get a Stryker Brigade.

18 A third flaw is there are pieces of the EIS that
19 aren't even there; and, so, there's no way the public can
20 comment on them. For example, a big part of the 23,000
21 acres is considered agricultural land of importance;
22 therefore, they need a farmland determination. That's
23 not completed, so we can't comment on it.

24 The EIS refers the reader to four sections that
25 talk about air space and noise impacts; and I looked; I

1 can't find any of these sections.

2 Several times in the EIS it refers to a
3 programmatic agreement with the State Historical
4 Preservation Office, and this has to do with cultural
5 sites and archaeological sites and historical sites. The
6 EIS says this agreement may have been revised. It
7 doesn't say whether it actually was revised and what
8 version is being used. And, again, the public cannot
9 comment.

10 To kind of sum everything up, Army actions are
11 endangering our island. There's danger from abuse of the
12 environment, there's danger from unexploded ordnance, and
13 there's the danger of forgetting that in democracy, the
14 people don't serve the will of the Army; the Army serves
15 the will of the people.

16 MS. LEE: Is Alana here?

17 Somebody stood up, and I thought that was her.

18 Alana?

19 What about Mr. Joe Watts? Joe Watts?

20 Serena Lynn?

21 Julian Aka?

22 Dr. David Heaukulani?

23 Aloha.

24 DR. DAVID HEAUKULANI: Thank you.

25 Notice I signed up with my academic title. I

1 got that because of the military GI Bill. Thank you U.S.
2 Congress. I owe you guys.

3 You know, in English I was forced to read a poem
4 by Robert Frost. It said something about going down the
5 forest and two paths, and he took the one less traveled
6 and that has made all the difference. Tonight,
7 everybody's going down -- majority going down this side.
8 I'm going to take the path less traveled and see if it's
9 going to make any difference.

10 I am David Heaukulani from Hilo, Hawaii. I
11 represent Ahahuio Manawa, a non-profit, non-incorporated
12 Hawaiian family organization of descendants of ancient
13 Hawaiian warriors, kanaka maoli.

14 I want to just address Pohakuloa. I have no
15 kuleana on the other islands. I want to talk about the
16 issue of compatibility with ancient Hawaiian warrior
17 traditions, that is not cited or included in the cultural
18 section of the EIS. It is recommended that some mention
19 of this ancient use of the Hawaiian Island lands be
20 included, at least as a footnote. It needs to be pointed
21 out that warriors of ancient Hawaii trained and battled
22 on the very grounds that is being used by the modern
23 warriors today on this aina, on this island. The culture
24 experts on the environmental staff of U.S. Army Hawaii
25 recovered several iwi, ancient Hawaiian warrior spears,

1 and approximately 20 feet long in caves in the Pohakuloa
2 area. This is confirmation that relative to Hawaiian
3 culture and tradition, the training of the areas is a
4 compatible use of the lands at Pohakuloa.

5 If you are familiar with ancient Hawaiian
6 history, you know that Chief Kaliiopu and his alapa
7 regiment of 800 nobels trained on this island.
8 Unfortunately, they went to Maui to battle Kahekili, and
9 all but one perished in what the Army calls today an
10 L-shaped ambush. If they were training at Pohakuloa,
11 maybe they would have gotten out of that ambush.

12 Similarly, Kamehameha finally conquered Keiua
13 after a nine-year battle at Kawaihae. The transformation
14 includes Kawaihae, a trail to Pohakuloa. It's all
15 ancient Hawaiian battle areas.

16 In another Hawaiian chant on the north side of
17 Pohakuloa, a great battle took place on the plains of
18 Waimea. Chief Kamalalau of Maui took on the armies of
19 the Big Island. And it's described by Samuel Kamakau,
20 the fighting men went up to the grass-covered plain of
21 Waimea. After warriors reached the plain, they looked
22 (inaudible) on the left and beheld the men of Kona
23 advancing toward them. The lava bed of Kahiku and all
24 the land up to the hui was covered with the men of Kona.
25 Those of Ka'u and Puna were coming down from Mauna Kea,

1 and those of Waimea and Kohala were on the level plain of
2 Waimea. Thus, from the landing point of Kawaihae, where
3 this Maui chief landed, all the way up to the plains of
4 (inaudible) from the (inaudible) slope, on the edge of
5 where Pokakuloa is now, to (inaudible) Kona side was just
6 covered with warriors as far as the eye could see. Rest
7 assured that the modern-day warriors of the Stryker
8 Brigade will require less land and ask for travel and
9 training within the same configuration. The point is
10 that the use of this area for training by modern-day
11 warriors is not incompatible with the use of the area for
12 ancient Hawaiian warriors. Hawaiian warriors and their
13 battles were fought at the heart of Hawaiian culture
14 heritage. To ignore this fact is to ignore a heritage as
15 descendants of Hawaiian warriors. This heritage I am
16 (inaudible) is on the behalf of my mother, because if she
17 were here, she would be making comments, because she
18 loved the United States of America, being employed at
19 Pearl Harbor, and she hated the Japanese because they
20 bombed Pearl Harbor.

21 It is customary to establish the pedigree when
22 invoking Hawaiian cultural issues. My mother was kanaka
23 maoli. The Hawaiian dictionary by Mary Kawena Pukui and
24 Samuel H. Elbert defines kanaka maoli as a full-blooded
25 Hawaiian person. So let me know if that has changed,

1 because I see a lot of part-Hawaiians going around
2 calling themselves kanaka maoli. Somehow I see many who
3 are not full-blooded Hawaiians doing this. My mother is
4 from the (inaudible) family. That family name is found
5 in the genealogy of Chief Ekamaimai (Hawaiian name),
6 published in the Hawaiian newspaper (Hawaiian word),
7 December 12, 1874. (Inaudible) translate manoa as man of
8 war. Manoa was the son of (Hawaiian name). (Hawaiian
9 name) was the son of (Hawaiian name). (Hawaiian) warrior
10 chief in the ancient command of the division of wars in
11 Kamehameha's army. The Manoa family has fought in the
12 line -- at Line 1251, 1251 in the (Hawaiian word) chant
13 in the sixth generation of (inaudible) and in the sacred
14 songs of the (inaudible) as described at Manoa, the king
15 of Hilo was famous for his skill and spirit. (Inaudible)
16 mother made us aware that (inaudible) are descendants of
17 Hawaiian warriors, and all the men of this family were
18 expected to be modern-day warriors. Hence, all the men
19 of the Manoa family are military veterans. And she led
20 the war (inaudible). One of her favorite sayings when
21 things were tough or when we complained was (inaudible).
22 (Hawaiian) is one of the Hawaiian words that means
23 warrior, which describe how warriors would tighten up
24 their malo to prevent any warriors from yanking loose
25 ends. But in the hidden context of Hawaiian, what she

1 was saying was, Warriors don't whine; Tighten up your
2 malo, and tough it out. And the modern vernacular to the
3 warriors is the same as saying, Suck it up.

4 In closing, it should be noted, today there are
5 Hawaiian men and women serving in the Hawaii National
6 Guard. They wear the Kamehameha patch in all branches of
7 the Armed Service. (Inaudible) also descends the ancient
8 Hawaiian warriors. Some (inaudible) families that come
9 to mind include Mahi, Palea, (Hawaiian names). These
10 sons and daughters of Hawaiian warriors trained at
11 Pohakuloa, lands traversed by ancient Hawaiian warriors.
12 It is imperative, therefore, that our modern-day warriors
13 have adequate training facilities to ensure their warrior
14 skills are developed and sustained. To deny them the
15 space and necessity borders on negligence. (Inaudible)
16 these modern-day Hawaiian warriors are there by choice.
17 Therefore, I appeal to the families who are descendants
18 of the Hawaiian -- ancient Hawaiian warriors to support
19 the choice to continue the warrior heritage.

20 Thank you.

21 MR. CHANG: Mahalo.

22 Is Jan Moon here?

23 To be followed by Keomailani Von Gogh and
24 Sarah Moon.

25 MS. JAN MOON: Well, I just can hardly say

1 anything more. I'm just so moved by everything that
2 everybody said.

3 I really wasn't too serious about this project
4 and about the Army and -- you know. I've lived here for
5 over 40 years in Kealakaha, and my heart is in Hawaii.
6 Hawaii has saved my life. And I used to go up there to
7 Pohakuloa and Mauna Kea and the Mauna Kea State Park
8 there, and it has a special spirit; and it's just broken
9 my heart. Over the years, I drive up there, and it's
10 just such a desert and such a wasteland. It's just a
11 horrible thing. I think the whole climate has changed up
12 there at Pohakuloa, up at that area of the Saddle Road.
13 It has so -- it used to have so much spirit there. We've
14 had so many legends there, so many spiritual things that
15 have happened to us up there, that I could just go on and
16 on, some of the stories. But I did write up something,
17 and I'll read it. It's something that everybody has said
18 tonight, and I'll just repeat it.

19 I want to thank you for this opportunity to
20 express my views and to be considered in the proposed
21 Pohakuloa Training Area expansion and transformation.
22 I've been reading and studying the Draft Environmental
23 Impact Statement, and I'm amazed at the information in
24 there. The overall impression is that this expansion and
25 continued use of PTA, it's not good to do. It's right

1 there. Particularly because of the destructive impacts
2 on this environment and ecosystems. The DEIS says the
3 soil erosion, dust emissions, the increased noise and
4 light pollution, the loss of native species and spread of
5 non-native species would increase the dangers of
6 wildfires. Also -- I think this is right in the DEIS.
7 Also, the DEIS says there would be -- have a significant
8 impact on the communities of Kawaihae, Waikoloa, Waiki'i,
9 the Girl Scout camp in Mauna Kea State Park. No mention
10 is made on the impact on the astronomers on Mauna Kea.

11 The land for your proposed expansion around
12 Waiki'i is zoned for agriculture and conservation. It
13 has never been used by heavy vehicles, training, or
14 munitions, which would destroy the land, compact the
15 soil -- quote in the EIS -- causing more dust and air
16 pollution and noise so that it would become another waste
17 land like the PTA is now.

18 The DEIS says there will be significant noise
19 with ordnance, vehicle, and construction. The proposed
20 PTA trail would have a major impact on all lands and air
21 and lifestyle around it. The DEIS says it would cause
22 flooding of public roadways and adjacent lands because of
23 erosion and silt accumulations.

24 The 1,005 heavy-duty vehicles going up this
25 trail would have a drastic effect on the nearby

1 communities with the noise and air pollution from
2 emissions and dust. Plus, the shaking of the earth would
3 affect Pu'ukohola heiau, a national historic site which
4 is sacred and must be respected and protected.

5 To quote the DEIS, quote, Fugitive air quality
6 and potential health hazards from vehicles and wind
7 erosion would increase 1,602 tons per year, with no
8 mitigation. That's a quote. In addition, dangers of
9 construction of the PTA trail, quote, would be greater
10 due to unexploded ordnances along it, and residents may
11 have to be evacuated. That's a quote.

12 There is so much on this island that is found
13 nowhere else in the world, including species in PTA and
14 the expansion area. The rare plants, birds, the sacred
15 sites, archaeological sites, the magnificent visual
16 panoramas, the pu'u, the astronomers, all must be
17 protected. The Army says it has a program to protect and
18 preserve some of these features. The Army should take
19 the next step and really transform PTA. Their goal and
20 purpose should be a showcase of a living park, nature
21 reserve. Remove all the munitions, explosives, and
22 heavy-duty vehicles, and restore the rare ecosystem
23 there. The world would be astounded. You could start by
24 immediately cancelling the general -- the expansion plan
25 and implement an environmental management system with

1 members of the general public and Hawaiian communities
2 and scientists, all with the common goal to restore
3 Pohakuloa to its former beauty and leave a legacy for
4 future generations.

5 Mahalo.

6 MR. CHANG: Keomailani Von Gogh.

7 I skipped a name, Ben Mead. We'll give Ben a
8 chance to collect his thoughts afterwards.

9 So Keomailani Von Gogh?

10 MS. KEOMAILANI VON GOGH: Aloha.

11 This process that we're having here is invalid,
12 and it's an attempt to create the illusion of democracy.
13 America's overriding purpose from the beginning, right
14 through to the present day has been world domination.
15 That is to build and maintain the capacity to coerce
16 everybody else on the planet, nonviolently if possible,
17 and violently if necessary. The purpose is not just to
18 make the rest of the world jump through hoops. The
19 purpose is to facilitate the exploitation of resources.

20 America has 22 Trident nuclear submarines, which
21 are first-strike weapons. Any one of these submarines
22 can launch 24 missiles simultaneously. Each of these
23 missiles can contain as many as 17 independently
24 targeted, maneuverable nuclear warheads, and each of
25 these warheads can travel 7,000 nautical miles and hit

1 within 300 feet of its intended target. If these were
2 fired in opposite directions, they can span 14,000
3 nautical miles. America can take out 408 centers of
4 human population, hitting each with a nuclear warhead ten
5 times as powerful as the bomb that was dropped on
6 Nagasaki. And America has 22 of these submarines.

7 America has been consistently selling a bill of
8 goods that has made people believe we need these Strykers
9 and more military buildup to protect our freedoms. Some
10 even believe they're being heroic when they have done
11 terrible things in the name of their country through
12 military actions.

13 My point to all this is that there is no threat.
14 The American government is good at working people's fears
15 through propaganda. Americans are the most scared and
16 insecure people in the world. Everyone's afraid of
17 people, wild animals, the rain, terrorists, crime,
18 aliens, and asteroids. The difference here in Hawaii is
19 that this is a land of aloha. People come from all over
20 the world for that purpose. War machines and killing do
21 not fit in here. We do not want or need your Strykers or
22 any military forces here.

23 Forty years ago, President Kennedy was trying to
24 organize the hemisphere to support his terrorist attacks
25 against Cuba. Most countries just went along because of

1 how influential America is, but Mexico refused. The
2 Mexican ambassador at the time said, If I try to tell
3 people in Mexico that Cuba is a threat to our security,
4 40 million Mexicans will die laughing.

5 I want to end this with a quote from
6 Colin Powell. He was asked this after the Gulf War. And
7 they asked him how many Iraqis he thought the
8 United States had killed; and his response was -- and
9 this is a direct quote: Frankly, that's a number that
10 doesn't interest me very much.

11 I want to wish you folks peace and peace to your
12 families.

13 Thank you.

14 MR. CHANG: Ben Mead?

15 Ben Mead, followed by Sarah Moon, and then
16 Kealoha Pisciotto.

17 MR. BEN MEAD: Aloha. I'm a quiet guy; I live a
18 quiet life. And I'd like to say there used to be some
19 politicians here, some elected officials. They're all
20 gone now, and there was only a few of them to begin with.
21 I guess voting raises for themselves or something is more
22 important than being here with something that actually
23 deals with our lives.

24 I'm what used to be known as a military brat.
25 I'm still a military brat. I'm 53 years old. I'm still

1 a military brat. Any of you military brats out there
2 know exactly what I'm talking about. I was raised in a
3 military family. And I don't have any enlightening
4 things to say to you. But I want you guys to know what
5 you're up against. You're up against the military. The
6 military is -- it's impossible to fight them. It's
7 impossible to fight them. We have already lost the
8 battle. And I speak from my heart on that. Because when
9 the military encompasses you, they become your home; they
10 become your family. I went to -- by the time I graduated
11 from high school, I had gone to seven different schools.
12 I lived in about fourteen different countries. And when
13 my father got out of the military, they essentially
14 brought us back to the States and said, "You can live
15 wherever you want." You're actually a resident of any
16 state you want to be a resident of. But the effect of
17 that was to make you homeless. I'm a homeless person. I
18 live in a house, but I'm a homeless person. And I envy
19 the people here that were born here, raised here. They
20 have a culture, they have a home, they have something to
21 hold on to.

22 Now, the reason I say this is impossible to
23 fight is because you're fighting people who feel like
24 they're fighting for their home, too. Their home is
25 military. They're a military organization. They call

1 you civilians. We look down on you folks. We look down
2 on you. I would look out in San Antonio -- I lived in a
3 military place; we would look out, and it was like
4 peering out through this wall and seeing the civilians
5 out there. Yet, when I went to college -- that was my
6 first public school, university -- I talked to a career
7 counselor, and they asked me what I wanted to be; and I
8 told them, you know, everybody I know drops bombs on
9 people for a living. I don't know how the mail gets
10 delivered. I don't know how bread appears in stores. I
11 don't know anybody that's a baker. I don't know anybody
12 that doesn't do military things. And that was my
13 culture. To this day, you know, 35 years later, I'm 15
14 minutes before any appointment; I'm there at 15 minutes
15 before. I work for -- for a company, and I'm a soldier
16 in that company; I'll do whatever they tell me. I count
17 on authority. I can't stop but do that. I can't. I
18 hate it. I can't stop myself from doing it.

19 I've also worked -- this is what you're up
20 against in that part.

21 I've also worked developing EIS statements.
22 It's a sham. Mr. Albertini said, you know, there are
23 people here who think this process -- who would say this
24 process is a sham, and it is. I'm one of those people
25 that think it. I used to be part of that. This is a

1 delusion. This is a diversion, to use a military term.
2 This EIS statement -- do you know you folks are not
3 addressing the EIS statement? The military's beginning
4 remark was, We're here to address the EIS statement.
5 It's a format. It's certain questions, and you address
6 noise, pollution, toxic chemicals, dioxin, whatever.
7 It's a format. They want an answer. They want us to
8 say, Hey, you guys say you can start a wildfire here,
9 that it's on ground that would be really hard to fight;
10 well, that's the statement: We can start wildfires like
11 crazy, and it's on ground hard to fight. They want you
12 to come back and say, Well, what are you going to do
13 about it? That's why this is a draft. It's not the
14 final document. You respond, Well, get in some tanks,
15 get in some water tanks up there. It's an arid area.
16 Get in some helicopters in there. That's their response.
17 Boom. End of public format. You guys said, This is what
18 we didn't do. We did it, okay. Are you satisfied now?
19 It hasn't addressed -- has anybody asked us and is it
20 okay to say we don't want it? Is that good enough? We
21 don't want it. Why isn't that good enough? Why does it
22 have to be because it can start a fire? Why do we have
23 to have a reason other than we don't want it?
24 You know what? There's no referendum on this.
25 This goes to Donald Rumsfeld, an unelected official.

1 He's the guy. Their own PR people here told me tonight,
2 he makes the decision. You heard that by the lady that
3 asked the question. He's an unelected official. He
4 makes the decision. They told me he lines up these four
5 or five Environmental Impact Statements and he makes the
6 decision. We don't diselect him. There's no democratic
7 process to this. I hate to say it. It's a sham. We're
8 being deluded. It's a bait and switch. It's already
9 done. We've already lost.

10 You know, the military is -- this stuff doesn't
11 make us strong. These civilians -- I worked, actually,
12 as a civilian for the military. It's feeding at the
13 trough. They look down on you. The only jobs that are
14 coming here are construction jobs. When it's built,
15 they're gone. You know what? There is not going to be a
16 stationary force. There's no families and homes and
17 people going to school and that. There are guys coming
18 in here and learning for two weeks how to drive these
19 things around, and then they're hitting the red light
20 district that's now up in Hilo, and then they're going
21 home, and they don't give a rip. They're looking down on
22 you guys.

23 Thank you.

24 MR. CHANG: Sarah Moon. After that,
25 Kealoha Pisciotto, and then Wilfred Sugiyama.

1 For your information, we have about 19 names
2 left, could be less.

3 MS. SARAH MOON: Thank you.

4 Good evening. I'm going to dedicate my five
5 minutes of advocacy for the ecology of Pohakuloa, Big
6 Island, Hawaii Island, USA.

7 I am very impressed with the great job done by
8 the Army-hired EIS team in showing how rare and valuable
9 and unique this area is. As a resident for 40-plus
10 years, my advocation now is biology of this island.

11 Looking at the eight-inch thick and, I hear,
12 eight-pound DEIS, I decided to focus on the plants and
13 the birds. So I looked at the appendix, Page I, 1-38 in
14 Volume 3 of the EIS. There, I found a list of 25 endemic
15 Native Hawaiian plants found in the PTA and its expansion
16 area. This means -- this word "endemic" means they are
17 found nowhere else in the world. Some are only found in
18 this region of inquiry, in the Pohakuloa area. I checked
19 the status of these plants with the manual Flowering
20 Plants of Hawaii, Volume 1 and 2, by Wagner and Sohmer,
21 copyright 1990, Bishop Museum. This is a definitive
22 manual on all plants of Hawaii, except ferns, which
23 aren't flowering. I found that the plants listed in the
24 DEIS as -- federally listed as endangered and/or
25 critically imperiled globally, were accurately reported.

1 Some plants are only found in the Pohakuloa area, and
2 some are down to just one plant in the whole world, and
3 it's found there.

4 Quoting the DEIS, Page 8-140, Volume 2, seven
5 out of the fourteen native birds listed as frequenting
6 the PTA and the regions of inquiry are federally listed
7 as endangered. In more than one place in the DEIS, the
8 mention of increased noise, use -- and use of explosives,
9 live or not, could critically impact the rare bird
10 populations. More attention must be paid to the critical
11 habitat areas and more should be designated. And we must
12 tell the State Department of Land and Natural Resources,
13 that because they allowed that to be, they gave
14 permission to the Army to ignore the critical habitats.

15 Quoting the DEIS, I feel the U.S. Army -- they
16 said they should consider an environmental management
17 system which includes ecosystem level management for all
18 rare species and pest management, fire prevention, and
19 land rehabilitation. This area is like the Galapagos
20 Islands, different from any other place in the world.

21 Why deploy more ecology-destroying war games and
22 heavy equipment in such a sensitive area, on such a
23 remote island, with the potential for major natural
24 disasters, earthquakes, eruptions, lava flows, tsunamis,
25 and land subsidance of the whole section of an island?

1 This is such a unique place of wilderness.

2 Why transform it into a training ground for
3 urban military training?

4 It is a rare place for many scientists.

5 Why close it to the future scientists by making
6 dust and noise, by transforming down to ugliness a place
7 undesirable for productive and recreational uses?

8 Thank you.

9 MR. CHANG: Aloha.

10 MS. KEALOHA PISCIOTTA: Aloha. Aloha ohana.
11 Aloha.

12 I'd like to thank you for having this meeting
13 and allowing us this opportunity to voice our mana'o.

14 I'd also like the record to reflect that I'm not
15 in support of this project or the expansion or the taking
16 of any more of the aina.

17 My name is Kealoha Pisciotta. I am the
18 president of Mauna Kea Nainaho, which is a religious and
19 spiritual organization and created to uphold the
20 traditional, cultural, and religious practices related to
21 our great Mauna and temple Mauna Kea.

22 I wasn't sure if I should address first the
23 religious and spiritual ramifications this project
24 (inaudible) or the ramifications associated with limiting
25 the topics or parameters of discussion to create the

1 illusion of public participation. But I've decided
2 because the religious aspects are most important here to
3 all of us, I will speak to the illusion of public
4 participation first.

5 I am a -- I'm a (Hawaiian), kanaka maoli, and
6 I'm a Hawaiian National, not necessarily by choice, but,
7 yes, by a choice. I'm a Hawaiian National because my
8 kupunas were Hawaiian Nations. And as the saying goes,
9 there's two things in life you cannot change: Your eye
10 color and your nationality. We never naturalized. So I
11 hope I get the American part right.

12 I want to talk about taxation without
13 representation.

14 I'm assuming that the Stryker Brigade is going
15 to be funded by public funds and that our taxes will be
16 paying for it; and that's where the problem lies. I have
17 yet to hear a valid claim or any valid arguments
18 explaining clearly and concisely why the Strykers are
19 needed and why they will keep us safer and why we should
20 support the taking of more of our land or why we support
21 this project at all. I've heard the basic arguments,
22 that the Strykers are needed to protect us and to defend
23 us and make us safer from terrorists. But this argument
24 must fail for the following reasons:

25 1, America is the largest super power in the

1 world. It has the largest nuclear arsenal of any
2 country; and it has had the largest arsenal for a long
3 time. Clearly, having the largest arsenal of nuclear
4 weapons did not effectively deter the alleged terrorist
5 attacks of 9/11.

6 The Strykers are offensive weapons and weapons
7 for urban warfare. They are not defensive weapons, which
8 means they will be used to offend upon other peoples,
9 including civilians. There has been no valid explanation
10 for how exactly they will make us safer if they are
11 offensive.

12 How will they help change the feelings of
13 hostility and contempt that many countries of the world
14 have for America?

15 I assume Congress has allocated funds for the
16 Stryker in the event that the Army collects the EIS
17 information, pursuant to the National Environmental
18 Policy Act and the National Historic Preservation Act,
19 and also can acquire the lands for the project, including
20 Hawaiian Homelands and ceded lands. But we must not
21 forget that the people of Hawaii have a distinct right to
22 oppose the project based on a very simple democratic fact
23 that they are not convinced, they don't wish to spend all
24 of the money on the project, and they don't support or
25 believe that it will help world relations. I agree with

1 the brother over here who said, We don't need a reason
2 not to support it; We can simply say, We, as taxpayers,
3 do not support it and do not wish it to be here. This is
4 the premise of taxation without representation. If our
5 hard-earned taxes are going to be used, then we, the
6 people, have a say on how we want that money spent. But
7 review of the agenda clearly demonstrates that the scope
8 of the dialogue does not, in fact, include such questions
9 as, Do the people agree with the project? They -- do
10 they want to spend their hard-earned money on it? The
11 agenda confines the discussions to the second step of the
12 process, which is where people begin outlining their
13 environmental and cultural concerns. Again, to help the
14 Army start to fix these concerns, all based upon the
15 false assumption that it is a done deal. I don't recall
16 having been asked if I supported the project at all, and
17 I don't know anyone who has been asked that. Democracy
18 requires that decision-makers and agencies do as the
19 people want, not the other way around.

20 There's a saying that the world is governed by
21 those who show up. Well, if we take a strong poll here
22 tonight -- well, plenty of people left already -- we
23 would ask, How many people believe that the Stryker
24 Brigade will keep us safer from terrorist attacks? Raise
25 your hand. Raise your hand. How many people do believe

1 that it will keep us safer? Raise your hand. I'm
2 asking. Raise your hand. Do you guys believe it will
3 keep you safer?

4 How many people don't believe it? Raise your
5 hand.

6 Okay. Therefore -- we could ask a lot. These
7 questions should be included in this discussion first.

8 So now the spiritual ramifications.

9 Hawaii Nei, Hawaii since time and memorial has
10 been a pu'uhonua, place of refuge, rest, healing, and
11 peace. The war machine and the tools of war are, very
12 simply, contrary to the very mandate of the pu'uhonua.
13 The Hawaiian people have since the beginning of time
14 acted only as kapu, guardians and protectors of the
15 pu'uhonua. This is why a very important topic you hear
16 the people speaking on is the protection of the sacred
17 aina.

18 The pu'uhonua is also the garden, the place of
19 creation, where Creator calls all things to grow and be
20 beautiful. People forget that the garden must be tended
21 to. Man can profane God's creation. Of course, akua,
22 the Creator, can fix it, but man -- and man is blessed to
23 cocreate, but man is not endowed to decreate. So the
24 Hawaiian people are like the gardeners trying to tend to
25 the land. And now many people live here in Hawaii, and

1 they, too, have joined us to become the gardeners. Some
2 have also joined, perhaps, to destroy the garden that God
3 has made for our life and our healing.

4 I don't come from the warrior clan. I come from
5 the priesthood clan. And the chant of creation that says
6 that when something becomes extinct, the process of
7 creation begins to unravel, not only for us who oppose
8 it, but for all people. And there really in this land is
9 only two states of being: In aloha or not in aloha. And
10 when you are not in aloha, you are being contrary to the
11 land. And all those who choose to remain out of aloha
12 are responsible for the actions that they do. But all of
13 us would like all people to come into the aloha and not
14 be entered in anything that is contrary. So we invite
15 all people here in Hawaii to enter the aloha. Regardless
16 of where you came from, you enter aloha, and we wish you
17 to stay there.

18 And we are the endangered species capital of the
19 world. There are 1500 Hawaiian monk seals left only.
20 And when the o'o bird became extinct, he sang one song
21 last. Were we there to mourn that song?

22 There are 6,000 pure-blooded Hawaiians left, and
23 we know that perhaps it's our time. But we will always
24 have to uphold the principles for which we were created,
25 and that is aloha.

1 Mahalo.

1 MR. CHANG: I know you guys must all be very tired.
2 Thank you for your continuing attention and cooperation and
3 courtesy shown to our speakers.

4 If you're okay to continue, we will continue with
5 Dwight, and then Wilfred Sugiyama, and looks like Lovtoi
6 Kipapa, something like that. Is Dwight here? No?

7 (No response.)

8 UNIDENTIFIED SPEAKER: Lawton Kipapa.

9 MR. CHANG: Lawton Kipapa, okay. Is Wilfred Sugiyama
10 here?

11 (No response.)

12 MR. CHANG: If not, is Lawton? Lawton Kipapa. After
13 Lawton, the names are Paul Patwick or Patrick, and
14 Catherine, looks like Becker or Decker.

15 MR. LAWTON KIPAPA: Aloha. Aloha, my brothers and
16 sisters and the Kapunas. I'm here today to represent the
17 re-instated Hawaiian Kingdom, and I just want to share with
18 the soldiers over here because I never been in the
19 military, but I got something short that I just wanted to
20 ask to let you guys know about what's happening up in the
21 mountain.

22 And what Auntie was talking tonight, she not here.
23 She was talking a lot about all the sites. She was naming
24 every single sites of all the ancestors, and not any of us
25 Hawaiians would know what she wen speak about in telling

1 you guys about the land. We have to mostly focus on our
2 land, you know, and you guys, that's America, but I not one
3 American. I'm a Hawaiian. I'm a kanaka maoli. I'm a pure
4 Hawaiian.

5 But the thing is we asking you guys, it's enough fo'
6 touching the land. That's enough. You guys get enough
7 lands up there. You guys bombing everything already. You
8 guys get enough training, and we don't need some more lands
9 to be destroyed because when you guys destroy the land, you
10 guys destroy our culture as the Hawaiians.

11 I know, but right now we have wars in Iraq. I think
12 they get enough things going on over there. I think you
13 guys should go over there and finish up the job. Let us
14 finish our job, take care of our lands, take care of our
15 aina, and I speaking fo' everybody inside here.

16 Us Hawaiians, we have to wake up and we need to look
17 at what's happening and we just letting the military know
18 what's going on. You know, when you get money involved,
19 you have money involved, we don't want that kind money. We
20 just like our aina back. That's all I said, and that's all
21 everybody said. We just need our aina back because they
22 been running us over for years, years, and it's enough
23 already, you know. We don't need this kind of action.

24 And I don't want to show my -- my keikis to see
25 what's happening in their future. Maybe they don't have no

1 future. Maybe everything get explode, and I don't want
2 that. So, you know, to make it simple, I letting you guys
3 know, and take 'em to the United States of America, we
4 don't need this on our -- on our aina.

5 We get love. You guys get love, so we get -- we get
6 one of the biggest hearts in the world, the biggest heart
7 in the world. We no need enemies. We no need enemies. We
8 just need the appreciation, the respect. Because every
9 time I hear historical sites, people no more respect of
10 our -- our grounds and everything. So, I letting you guys
11 know what, you know, how I feel, or my mana'o, because like
12 I said, I'm not an American. I'm a kanaka maoli, and I'm
13 going to tell the man on top, and you guys know.

14 And thank you very much to be here, and we just leave
15 it up to you guys, because you guys make the decision. We
16 take the responsibility. And we always taking -- we
17 always, us Hawaiians, taking the responsibility. Because
18 not anybody in the world can take the responsibility like
19 us guys. We just keep on fighting and fighting, but it's
20 enough fighting, we got to exercise our rights.

21 We got to exercise our rights because if we don't
22 exercise our rights, you guys gonna take over us, then you
23 guys gonna be in control of the lands. It's happening
24 right now. It's happening, but the thing is, we no like
25 'em happening in that way.

1 So I just ask -- I just letting you guys know in a
2 humble way, we gonna exercise our rights, too. So, Aloha.

3 MR. CHANG: Thank you. Paul. Paul, not here.

4 (No response.)

5 MR. CHANG: Catherine Decker or Becker.

6 (No response.)

7 MR. CHANG: Bunny Smith. After Bunny Smith will be
8 George Graywolf Klare. And then Abraham K. Kamakawiwaiole.
9 Bunny Smith.

10 MS. BUNNY SMITH: Thank you. Good evening. Aloha,
11 everyone. Aloha. I will be very brief. I think many of
12 the topics that are of concern to me have already been
13 discussed. There are a couple of things I would like to
14 mention, and one of them is we're being told that the
15 Stryker Transformation, all of this, will be a boost to the
16 economy. I'm always very, very cautious when somebody says
17 you're going to get something for free, you're going to get
18 this, that, or the other. What we need to look at are what
19 are the real costs.

20 For example, in Sumatra just now, with the flooding
21 and so forth, how did that happen? Well, you see they got
22 this boost by being able to go ahead and clear cut all
23 these forests. The real cost was it facilitated flooding
24 to the extent that now hundreds of people have died. That
25 is the real cost. Not the money they might have gotten

1 from the lumber. What will be the real cost here for our
2 land being taken and used for this purpose and furthermore?

3 The next thing has to do with water. It hasn't been
4 mentioned, I don't think, this evening, but my
5 understanding is water is a very serious problem in Kona
6 and Kahu as well. Where are we supposed to get the water
7 for additional people coming on for their living needs, for
8 the working needs, and for the inevitable forest fires that
9 will happen because of the live ammunition? Where is that
10 water coming from? I don't know. Maybe there's a tooth
11 fairy that deals in water, but at this point I don't see
12 anything in the EIS that really seriously addresses it.

13 The dust has been -- has been spoken about, and I
14 will just mention the other evening, I was on Saddle Road
15 coming back. Parallel to us was one jeep, one small jeep.
16 The amount of the dust was unbelievable from one small
17 jeep.

18 Now, the other point is and I also am very concerned
19 about is we set ourselves up here with all of this and we
20 will be a magnet for terrorism. Terrorism will come to us.
21 The Stryker will not prevent terrorism, but terrorism could
22 come to us. It seems to me that the Stryker is very
23 definitely, as some others have said, an offensive weapon.
24 It is aiming at other populations. It is a flattening,
25 leveling instrument, if you will. What is it going to

1 flatten? It will not flatten the aina as it is here now or
2 would do here. It's going to be flattening people. It's
3 going to be flattening villages, people like us, and I
4 think we need to understand that is what its purpose is.
5 It's offensive. I think we're talking here that what we're
6 seeking is Aloha and peace, and we don't need the Stryker.
7 Thank you.

8 (Applause.)

9 MR. CHANG: Thank you. George Graywolf Klare, is it?
10 And Abraham Kamakawiwaiole and then Reynolds Kamakawiwaiole
11 afterwards.

12 MR. GEORGE GRAYWOLF KLARE: Aloha, everyone. Yes,
13 I've been sitting here listening to it all, too, and having
14 you gentlemen here listening to it, too, and I kind of feel
15 sorry for you guys in uniform because we lost our country,
16 the one that was called the USA on 9/11, before really, but
17 I want to know who you guys work for because I'll tell you
18 what I think.

19 The President's dad's dad was named Prescott Bush.
20 Prescott Bush managed German industrial and financial
21 interests in the United States from 1920 to 1942, and
22 Congress made him stop trading with the enemy. Did you
23 know that? Did you guys know that? Do you know your
24 American history?

25 Eisenhower, Prescott Bush was his election chairman.

1 He warned the country against the military industrial
2 complex. Who do you guys work for? You guys aren't
3 working for Constitutional America anymore. I wanted to
4 speak to the military people that were up here tonight
5 because my military people, and that's why I introduced
6 myself as Graywolf. My heroes were all red, and my land
7 was stolen. You guys are sitting on it still. Everything
8 you guys have has been stolen.

9 Now, you are agents of the state. You have to do
10 what you're told. Doesn't it make you a little nervous
11 because American democracy is totally out of control. This
12 meeting could be going on in Germany. We have an offensive
13 weapon here called a Stryker. Have you heard of the Panzer
14 Brigade? Did hear of the Panzers? You guys hear of the
15 Panzers? Who is the head of that political system? Adolf
16 Hitler.

17 Okay. Prescott Bush financed the rise of Hitler.
18 Henry Ford contributed, E.F. Farven contributed. Henry
19 Ford had a plan making tanks in Germany. Not once was that
20 tank factory bombed by the allies, and so was E.F. Farven,
21 the giant drug company.

22 So, I don't think these Strykers are needed and I
23 think America has been stolen again. This time by the
24 military industrial people whose bosses are the global
25 elite, the old wealth of Europe and the new wealth of the

1 new world. Daddy Bush, George Bush, Senior used to talk
2 about it in a romantic way. We had to get on board with
3 the new world order. We're talking about the new world
4 order, and you guys are in Iraq, not in Vietnam, and where
5 do we go from here, Central Asia? Does that stand? Watch
6 where this Imperialism leads.

7 We have a system that blends Christianity,
8 capitalism, and industrialism together and it creates
9 fascism. Now, for the last ten years we've been hearing
10 about the silent majority. We had to protect the silent
11 proper majority. Well, who's the silent majority? Those
12 are the ones that are going to sit quietly while the world
13 is destroyed. It's being destroyed right now.

14 You guys must have children. You must think of the
15 future. We used to think of seven generations. That meant
16 you didn't pick the first herb. You walked to the
17 seventh one, and you made sure and you talked to them and
18 you asked permission. You're related to the aina, or the
19 earth mother, as a living being. Your super mother. There
20 was a closeness, divinity we have here.

21 Tell me war is an ecological event. It's a disaster.
22 You can't fight a war and win anymore than you can fight a
23 volcano and win it. So what is this? We've got to use the
24 Aloha. We've got to use love. That's all we can do.

25 And I wanted to talk about the terrorists. They're

1 wearing your uniforms. The President lied to all of you
2 about the reason for this war. Doesn't that make you a bit
3 nervous about going off doing whatever they want. The
4 Germans were good Germans. They just followed orders. The
5 common people didn't want war. What do they want war for.
6 They could only come home broken. It's the leaders that
7 want war, so I say, our work is with each other. We have
8 to unite, support all things Hawaiian.

9 This is a country that can start a universal human
10 rights movement that will stop all this kind of violence.
11 This love that's in this aina, people come for. So I feel
12 powerless. I've watched American democracy sail away. I
13 used to be a political science professor at the University
14 of California. I spent 30 years being a shoemaker and now
15 I'm trying being a farmer, and I love the aina. I love the
16 earth mother. And I will resist the encroachment of what's
17 going to kill and destroy her until I can't breathe
18 anymore.

19 (Applause)

20 MR. CHANG: Thank you. Abraham Kamakawiwaiole.

21 MR. ABRAHAM KAMAKAWIWAIOLE: My name is Abraham
22 Kahina Nalani Kamakawiwaiole, and I think it's most
23 admirable that we have so much aloha here in this room. I
24 was also in the military, and I'm concerned about several
25 things that are going on, primarily because of the fact I

1 don't know what's happened to the continental United
2 States. And I always say that the United States is not
3 protecting America. America is protecting the United
4 States, and Hawaii is protecting the United States of
5 America.

6 I was a service man, and I grew up during the time of
7 the second world war. Marines came to my home, soldiers
8 came to my home. I was impressed and they even kidded with
9 me and asked me, you know, what I was going to do when I
10 grow up. I said, oh, I'm going to join the Marines, but
11 I'm going to college, and they thought it was funny. Well,
12 that's just what I did.

13 I went to Kamehameha Schools. I was very impressed
14 by things, ROTC, and then I look at what's happening now.
15 I don't think that the military recruiters should go into
16 the schools to recruit primarily because of the fact that
17 they don't know what's going up there in the continental
18 United States. Where is America? I know where Hawaii is.

19 And I do not really like to come over here and
20 testify primarily because of the fact I remember my friends
21 coming from everywhere, I still do. I've been to Iraq. I
22 was working for an American company. I lived with the
23 Iraqi people and I understood some of the things that they
24 were talking about, and they used to ask me, how come you
25 work with them? You're not American. And even at that

1 time I didn't know because of the -- because I didn't know
2 my own history. I did go in and check on my own history.

3 My concern right now is how can we do this? There's
4 something wrong in the education system that we have. The
5 true history is not being taught. The funds for education
6 come out of the Federal Government also. So where are we?
7 No better than we were in Nazi Germany. I think it's
8 something for the people to consider, and you people have
9 children, too, what are you going to do?

10 I don't know what will happen to the military, but,
11 you know, I don't want to see any of them die wherever they
12 go. They don't belong in that country, and you can't do
13 things with beach, why are you there?

14 I saw, duty, honor country. What country are you
15 talking about? Where is your honor? I think people are
16 pretty honorable men, people are in the service, but they
17 too have been taught certain kinds of history. You had
18 draftees at one time, and we were upset that, you know,
19 they were draft dodgers also, a lot of them, but I learned
20 a lot from them, too, you know, because they had amnesty
21 later on after we came back and went to college. And we
22 learned -- I learned -- while I was upset about them when I
23 was in service, when I came out, I was still upset with
24 them because they were still trying to call me, you know,
25 killers of children. The education system is what we have

1 to think about.

2 As far as land, you want to do something for us, the
3 explosives are still around. People know where they are.
4 And if you look at Kaho'olawe and what they've done and
5 even until now, people have not kept their promises. I
6 don't know what will happen, but there's a greater power in
7 all the world and it's based on the person who created this
8 earth with love. This is where something can happen in
9 people that's good for our mankind.

10 When you talk about water, the waters were there
11 where they're at. They're on our water. And there's
12 another thing, I don't like the invasion of, you know --
13 you have -- the military has their alliances, but I don't
14 know, do they come over here? Do foreign countries who are
15 friendly with the United States come over here and use our
16 waters and Pohakuloa and different places? Why don't you
17 go bomb their lands? See if they'll let you there.

18 This place is very special to everyone. It's the
19 land of aloha. It's something that people have to think
20 about. We are isolated here for a very special reason
21 because we're also connected to the universe. Astronomers
22 know this. That's what people are all about.

23 I'm certain that there are people out there -- I
24 mean, people in the universe, but, you know, if I was a
25 people up there, who will want people down here to go up

1 there? We don't belong. You don't belong there. You
2 don't belong here. Go home to your wife and families, and
3 you know, and the country. Bring back the country. Bring
4 back peace on earth, goodwill towards men. Mahalo.

5 (Applause)

6 MR. CHANG: Reynolds Kamakawiwaiole. After him, Kent
7 Warshauer, and then Aurora Kaipo.

8 MR. REYNOLDS KAMAKAWIWAIOLE: Aloha, everyone. I
9 know it's pretty late tonight. I'm Reynolds Nakoka
10 Kamakuiole Kamehameha Aka'i.

11 Our family goes back many, many years and in history
12 it shows that our great, great grandfather in the battle
13 had saved Kamehameha's life, and there was a reason. There
14 was a reason to that, so many things that was saved was to
15 perpetuate what is here today. Kamehameha knew that.
16 Kamehameha knew what was the place called Hawaii nei.
17 Kamehameha knew about the mu, and I share to you at this
18 time for the military to know what is mu. We are the
19 children of mu.

20 You may talk about native Hawaiians. You may talk
21 about everything else, but that's who we represent. We
22 have amongst our commandments of living, the one key
23 commandment is given by our creator, forgiveness first.
24 Very true of what's happening in the world and what's
25 occurring now.

1 In our -- I've been in this spiritual world for a
2 while, come back to come and talk and share because this is
3 what Hawaiians are. They're spiritual first, and all
4 battles that was done was because they had to protect what
5 is here as many of the things was never done by Hawaiians.
6 Hawaiians were able to concentrate and do things with their
7 mana. They could move things with their mana. A E U.
8 They practiced their lu'a. They could take out anything.
9 But the thing is, we're at this time, looking at a
10 foundation.

11 And, gentlemen, I served the United States of America
12 back in the 1960s. I went to Vietnam. I was with 101st
13 Airborne Division. Eighteen months in Vietnam. I seen
14 war. I seen its people. I seen the third world country.
15 And when I went there, I was thinking, what are we doing
16 here? Because some of the people that were there, look
17 like the people that live here. You know, only thing, they
18 were so poor, and we were in their country. And I said to
19 myself, what are we doing here? What are we doing here?
20 This is not our country.

21 But, you know, the elements that I found out later on
22 that create this war to get people into the hospitals, to
23 completely take care of them for the rest of their life,
24 make money was there. The other element that controls
25 everything else, that causes wars to happen, very true.

1 And this is why, for me, at this time, I look at the
2 Stryker force in a different way. Because what is Hawaii
3 nei? What is it all about? The reason why the military
4 chose this place to be the R and R center during Vietnam,
5 why? Why not go to another place in the whole world
6 because it was the healing place. The people came and they
7 healed. While people come to visit, they heal. They
8 connect, they reconnect with their akua. They reconnect
9 with God. They reconnect with the aina, because some of
10 them, first time they touch the aina because they touch
11 cement all the time. They never get to know the water.
12 They didn't know the aina.

13 For me, going and placing continuous impact and
14 continue to explode in an area that is so sacred to the
15 Hawaiians and the most sacredest in the whole world,
16 gentlemen, the most sacredest in the whole world is Mauna
17 Kea, and that's why the face of Mauna Kea -- I mean, the
18 face of Mars is the same place of Mauna Kea. The same
19 exact place. You take a look at it. You go take a look
20 where they got the Mars and you'll find the Mars face is
21 the same place as Mauna Kea. Why?

22 Because our ancestors made sure that we knew how much
23 important that was, and so we cannot, we cannot go based on
24 what you say, EIS whatever it means, we cannot allow it
25 further to be challenged.

1 What this thing is doing to us, and what it is
2 telling us, get off your okoles, gentlemen, Hawaiians, get
3 off your okoles and see what's happening here. Okay? It's
4 putting the fire under there, and these gentlemen are here
5 because this is the kind of things that have to happen to
6 us Hawaiians. We have to wake up, you know. We got to be
7 makala. We got to be makakau, and we got to look at this
8 and say, do we want this or we don't want this. It has
9 nothing to do with whatever they saying inside the thing.
10 This is our land.

11 HRS says that we -- that the state has to be
12 responsible to us, to what we want, not what anybody else
13 want. They are responsible to make sure that it is what we
14 want, not what somebody else wants. We protected by that
15 law, and that's the problem with this. We keep on getting
16 growth, and, gentlemen, at a time when we're trying to
17 protect our sacred mountain, here comes the military right
18 on the side of it and it intimidates us -- our people
19 because we are so sensitive. Our aloha is so sensitive,
20 that in our heart, we are the ones that get pressured and
21 stress and the next thing we know, we maki because our
22 spirit dies.

23 If you continue to do what you're doing, you're not
24 only going to war, but you're killing the Hawaiian people.
25 Stress, intimidation, fear, Hawaiian people are going

1 towards nationhood. At this particular time, if anything,
2 the Army wants to do is to clean up their act, put things
3 together, and know where they're going, because where
4 they're headed is in the wrong direction. If Kamehameha
5 was here today, he would have challenged you guys, and say,
6 no, because he know that that place is not supposed to be
7 like that.

8 Sure there was battles as the brother said, but there
9 wasn't no big machinery going down the road and going down
10 and pounding and throwing some explosive inside here. That
11 wouldn't be allowed. The battles were done on the surface.
12 Because we could do it with our hands we could move the
13 hands. And this is why what is happening here is
14 absolutely wrong, and we don't have to tell you nothing.
15 Nothing. We don't have to tell you that that is sacred.
16 We don't have to tell you that this place is what is.

17 You have no business to ask us what is sacred to us.
18 No business. It's like the Native Americans have to tell
19 nobody what that place is. They have no moneys to ask the
20 questions. We are the living people. We are the children
21 of mu. Our place extends off into the ocean. We own all
22 of this. We own everything.

23 Until you folks understand that, take a look into the
24 Internet, take a look at library, find out about it.
25 You'll find all of these places are all connected. It's

1 that powerful. The power is in the people. The power has
2 been peaceful. The power is to know, have knowledge.

3 The Army is here as visitors. You are on our land
4 and I ask you to consider this. What we talking about is
5 so deep, so deep, that I cannot even bring out to you how
6 much it is to me because I have done the work.

7 The depth of Mauna Kea is where she lies. And where
8 she lies the mother. I share this with you because
9 Kamehameha knew that. He knew, that's why he was able to
10 stay out. He knew that because that's the secret. And you
11 folks -- and the Army uses Kamehameha's -- some of
12 Kamehameha's movements. I know that because when I went
13 into the Army, I found that out, but we are moving towards
14 peaceful ends. I say to this project, no more. Because I
15 don't want that to happen to my children, my grandchildren
16 and the years to come.

17 I want them to learn peace. Change around the way
18 you folks are looking at things. Change around. Go to
19 someplace else. Because I feel that should this project
20 come on here, it will desecrate our Hawaiian name. It will
21 desecrate and cause a shift that will actually cause
22 problems on this island and all over the place. You have
23 to know that. They are power points in this place, just
24 like when you have anything. There are power points, and
25 one of them is right there where you're at. If you shift

1 that -- you know, shift things, it will cause things to
2 drop. All by humanics, everybody knows about humanics, how
3 it affects things. If you change the humanics, you change
4 things, it will change the way life goes and it will change
5 the way the earth goes. Because that -- when you move
6 something like this, then you shake it up, it will shake
7 enough that it will crack and it will go off.

8 Now, these people up on the shoulders, based on the
9 top of the mountain, they still haven't felt the impact
10 yet, but as the people talk here, they talking with their
11 ancestors. In the back of me is 10,000. Ten thousand of
12 them. I talk spiritually. I talk for them because they
13 cannot talk. So when I come through, I share you folks
14 what I'm sharing with them, what comes through them. They
15 don't like it. I'm telling you right now, they don't like
16 it, and I feel this -- and when I share that that's what it
17 goes through. So for me and the family that's out here,
18 and of course, all of you guys are family.

19 When I share things, I'm not here to make it like
20 it's, you know, to say that it's gonna -- I'm here to
21 protect you guys for making the wrong movement. The wrong
22 movement and this island could be disastrous. The wrong
23 movement. So, gentlemen, this is the morning, this is the
24 sharing. Do all my brothers and sisters hear?

25 I waited this long. I didn't want to go first. I

1 was here in the first one. The first one on the line.
2 When they came up. I didn't want to do that because to me,
3 those that stay strong and those that are here now, they
4 are waiting for this, and they should know about it. I'm
5 sharing something very deep, something very spiritual,
6 something that's for all of you. If you broke down the
7 foundation, it will broke down everything else. And it
8 will take you down. Thank you, gentlemen.

9 (Applause)

10 MR. CHANG: Mahalo. Kent Warshauer. After him,
11 Aurora Kaipo and then Kris Kato.

12 MR. KENT WARSHAUER: Howzit, everyone. Aloha. I'm
13 not an activist. I'm not a politician. I'm not a
14 philosopher. I'm only one historian, and I'm here to give
15 you guys one history lesson. Back in 1819, Liholiho broke
16 the taboos. Prior to that, they used to have something
17 called human sacrifice. Since 1942, human sacrifice seems
18 to be what you guys are doing to our land over here in
19 Waimea.

20 The first fatality was February 14, 1944, U.S. Marine
21 Private George Charles Martin used a 37 millimeter shell as
22 a hammer and it killed him. The second fatality was Jessie
23 Enos. He found a shell 10 feet off of the Mamalahoa
24 Highway, tapped it on a road roller and it exploded. He
25 was working for the U.S. Engineer Corps at the time fixing

1 the Saddle Road area and that was on January 17, 1945.

2 The third and fourth fatalities were Theodore Bell
3 and Russell Iokapea and they were working on a fence line
4 at Keeaumoku for the Parker Ranch, and one of them found a
5 81 millimeter shell and they tapped it, it exploded, killed
6 them and three others were injured, and that was on May 31,
7 1954. Following that event they had a big sweep on Parker
8 Ranch trying to clean up the mess that you guys had left.

9 Another mortar shell was found in a dump at Waimea in
10 August 1957. Two grenades were found in Keeaumoku in 1961.
11 Another grenade was found in Waimea in November of 1963.
12 More grenades were found in Waimea and the Saddle Road area
13 in December of 1963. Another grenade was found in Waimea
14 on November 4, 1972.

15 And two marines were injured near Pu'apa'a on
16 August 30, 1983, when they tripped over another one of
17 those 81-millimeter mortars left over from the war. And
18 they had a big fire on July 23, 1998, near 'Ole Aikane
19 subdivision which is down towards Kawaiahae and the
20 exploding ordnance kept the firemen from putting out the
21 blaze. They just let it burn out because they didn't want
22 to go in there and endanger their lives.

23 In the Waikoloa area on August 31, 1972 they found
24 the first of many 155-millimeter shells. That's a 6-inch
25 shell to you people out there. It's quite dangerous. On

1 September 21, 1994, they found another 155-millimeter shell
2 near an elementary school. Some kids found it and they
3 were smart enough to go out and point it out to the
4 teacher.

5 As for Pohakuloa Training Area, the deaths started
6 there early. You guys took it over for training after the
7 Korean War. You decided that it was a good area, so you
8 guys started to play over there. On September 18, 1956, a
9 Marine lost his arm in a mortar explosion there.
10 September 27, 1958, another Marine was injured by a dud
11 shell. On March 11, 1971, a 17-year-old kid, James N.
12 O'Hara was killed by a 40-millimeter grenade launcher taken
13 from Pohakuloa. He went up there and found it lying on the
14 road or something, took it home and blew himself up.

15 On May 9, 1978, Jeffrey Jenkins of Skoko was also
16 killed by a dud there at Pohakuloa. On July 15, 1980,
17 Howitzer explodes killing one Sergeant James Lloyd, Junior
18 and injuring another four people.

19 On June 10, 1984, Specialist 4 DLN Henry Rivera
20 Gonzales was killed by a dud and another person was
21 injured. On July 7, 1988, a 60-millimeter mortar explodes
22 and kills Gunnery Sergeant Howard E. Harris and Corporal
23 Clifford L. Cutters, II, and 15 men were injured, and I
24 think those are all human sacrifices and it was caused by
25 your ordnance that was uncleaned up.

1 These people had no idea that they were going to die
2 except possibly the soldiers fooling around with cannons.
3 You do take chances because if somebody makes a mistake
4 loading it or somebody makes a mistake building the
5 ammunition or setting the fuse, they're going to have an
6 accident and it can take out a lot of people.

7 And I don't know if you guys realize it, but there's
8 a lot of ordnance all over the islands. I've been studying
9 this problem for about 20 years, and I can tell you where
10 all these pieces are, but I only just wanted to mention
11 what was around here in Pohakuloa, and there's been deaths
12 on Niihau. All the islands, they've had people killed by
13 the ordnance that was left over mostly from World War II,
14 and some of it, as you can see, was by a modern ordnance,
15 and I'm sure that in the future if you bring over these
16 Stryker people, we're going to have a lot more human
17 sacrifices and these people are just going to be walking
18 around and all of a sudden kick a mortar, bang, them and
19 innocent people around them are going to die. And I think
20 you guys should be spending a little bit more attention on
21 cleaning up what you've left over here over the years and a
22 lot less attention in bringing a bunch of Strykers over
23 here and shooting uranium bullets and whatever you plan to
24 do. Okay. Thank you.

25 (Applause)

1 MR. CHANG: Our next speaker is Aurora Kaipo. Can I
2 ask, does anybody need or want the Hawaiian interpreter to
3 remain tonight? Okay. So we can release the --

4 MR. ABRAHAM KAMAKAWIWAIOLE: I just want to say
5 good-bye to everybody, and I enjoyed your testimonies.
6 And, you know, I hate to be rude, but I got a long way to
7 go, my brother and I. Mahalo.

8 MR. CHANG: Thank you. Aurora Kaipo followed by Kris
9 Kato.

10 MS. AURORA KAIPO: I thank everybody for being here.
11 I think I agree with everybody in this room, but mostly I
12 want to talk to these fine gentlemen that are so patient,
13 and I know your okoles must be sore, but thank you for
14 listening.

15 I think you have a lot to digest. What people have
16 brought to you today is their hearts and their souls.

17 UNIDENTIFIED SPEAKER: Can you talk a little louder?

18 MS. AURORA KAIPO: Sure, I can. What people have
19 brought to you tonight is their hearts. Excuse me, I think
20 it's really -- I take your presence here as really
21 important, and I know you have a lot to digest and what has
22 been brought to you is of the most importance. People are
23 bringing to you their hearts, their souls. Stuff that goes
24 far behind them and far in front of them.

25 I don't know how much you can grasp, but I know this,

1 this is what my mother taught me, that we're all brothers
2 and sisters. We seem to have just forgotten that along the
3 way, and I'm going to speak to you as human to human. We
4 all breathe the same air. We all come from the same place
5 this earth, our mother. We all have the same father, the
6 Father God, whatever name you want to give him. It's all
7 the same.

8 There's a battle going on. You guys know battle
9 better than I will ever know and will ever care to know.
10 The battle you guys fight is a physical battle. I pray
11 that whatever I say to you and whatever you've heard
12 tonight that you don't take a personal offense.

13 There is -- there was at one time a great honor in
14 the military. My father fought against the Nazis. At this
15 point in time, your Commander In Chief, has appeared to be
16 directing you to fight for multi-national corporations.
17 The general American public sees that that does not benefit
18 us.

19 The battle that's going on right here right now is a
20 spiritual battle. From what I've been taught from my
21 parents and from the Bible, is love will always overcome
22 hate and evil. What Stryker will do here is hurt. It's
23 going to hurt on many, many levels, and that's what was
24 told to you today. We're just an island in the Pacific,
25 but there's a whole lot more going on.

1 I agree with 99 percent of what was said in this
2 room, but there's two things that I don't agree with that
3 our freedom has come from fighting battles on foreign
4 countries. Our freedom in America has come from common
5 folks that you see in this room mobilizing non-violently
6 for women's rights to votes, for Africans' rights to vote.
7 That is when freedoms are hard won like what we're working
8 on right now.

9 The second thing I don't agree with, and is really
10 important for you to know, that Mr. Inouye has said this is
11 a done deal -- Senator Inouye, excuse me. Well, it's not a
12 done deal, and this is how I know it's not a done deal,
13 because one, we're not there yet. And I want to give you a
14 small history of the Big Island. I've only lived here 20
15 years. My last name is Kaipo. That's not by blood. I'm
16 not Hawaiian, by injection and marriage, but not by blood,
17 so I'm not even going to speak on that behalf. I'm going
18 to speak on what I've experienced here because you need --
19 you need to know this because it hasn't come out here.

20 I have a map of the Big Island. I just need somebody
21 to hold it up for me. You're tall. Okay. It's a funky
22 little map. The Puna District on the Big Island,
23 Mr. Inouye came up with this grand scheme, financed and
24 everything, for 50 -- for 500 megawatts of geothermal power
25 to be shipped, electricity underground to the other

1 islands. Didn't happen. That was a done deal.

2 A prison in Ka'u, done deal. Didn't happen. A
3 radiator plant in Hilo, done deal. It didn't happen.
4 Homes for rich people on sacred lands in Kona, it's not
5 happening. And it all was stopped by all of these people
6 in the room.

7 Now, I know you may not grasp all the spiritual
8 things what were given to you today, but when you go to bed
9 tonight, you will get a message. Please listen to your
10 dreams, but I'm trying to speak to you in a language that I
11 think you guys will understand.

12 Here's the Big Island. We are filled with people
13 that roots go in time memorial here. We are filled with
14 very well-off people. We have a rainbow of cultures here.
15 We all agree on this. Now, the problem is you want to do
16 this in the middle of the island. It will be quite easy to
17 mobilize this whole island against the Stryker force. All
18 these projects were stopped non-violently. I know you may
19 not be familiar with non-violence, but that's the way we
20 live.

21 You can -- you can either go back and say this is
22 really not going to go, because it's not going to go. It
23 will not go. There's people here that are in pain and
24 willing to lay down their lives for it. They won't harm
25 you, but they will get in the way so you don't continue to

1 harm them, the earth, their children, and their ancestors
2 that are buried there, so I need you to know that, that
3 there will be a non-violent resistance that will be much
4 calmer than Seattle's WTO. That there's a lot of people
5 willing to stand up for Hawaii, so you can either not do it
6 or be put in the eye of the world for a non-violent
7 stopping of this project. I would prefer you didn't do it.

8 The military is a humungous force. You have such
9 organization. You have heard why we don't like you, and
10 please, like I said, this isn't personal. If you were to
11 take that organization and training that you have, you want
12 to stop terrorism, go to all these countries that are so
13 poor and build hospitals and homes and provide fresh
14 drinking water and education, and stop killing people and
15 nobody will want to harm America again. That's what I
16 would ask you to do is bring those two things back.

17 This is not a done deal. We will stop you. It's
18 very easy. You're in a bad location. You want to do it in
19 the center of the island, you will be surrounded. We will
20 protect our children, our future, our ancestors, and our
21 aina.

22 Please take that back with you. I know you have a
23 lot to digest, but it's not a done deal, and it's really a
24 lost cause and thank you very much.

25 (Further proceedings were had on the following page.)

1 MR. CHANG: Kris Kato, to be followed by
2 Bonnie Bator, and Gianna S.

3 MR. KRIS KATO: I would just like to make some
4 general remarks on tonight's hearing.

5 A nation has been relinquished of its power and
6 property. This decision regarding the expansion of
7 Pohakuloa Training Area and the Stryker Brigade in Hawaii
8 seems to only validate the need to restore what has been
9 taken away. I understand in a sense you have relegated
10 us to the status and title of indigenous people. And we
11 are just one of many players in the current international
12 system, an arena fluid and irregular with deeply
13 perspective constructs, as we have observed here tonight,
14 inflected by historical, linguistic, and political
15 situatedness of different actors; and these actors are
16 nation states, communities, individuals, and the
17 environment. In short, we live in a fragmented world,
18 the United States being the sole and dominant super power
19 we are subordinate to.

20 In having established a context for this
21 hearing, I would like to say I am against the expansion
22 of Pohakuloa Training Area and the Stryker Brigade in
23 Hawaii. It is a dishonor to the dignity and legacy of
24 this land and people, to Mauna Kea, a monument to space
25 and time.

1 Thank you for organizing this hearing.

2 Thank you, all speakers, everyone here tonight.

3 Aloha.

4 MS. AMARAL: Aloha. Mahalo.

5 Bonnie Bator, followed by Gianna S., followed by

6 Robert Kozuki.

7 Bonnie, are you here?

8 We don't see a Bonnie making her way up, do we?

9 No. We just see Lou.

10 Gianna?

11 Okay. And we don't see Gianna, either.

12 Robert Kozuki?

13 No Robert.

14 Mikahala Roy?

15 Here comes Mikahala. Aloha.

16 MS. MIKAHALA ROY: Aloha kakou. Na ohana.

17 My gratitude is given to the brave souls who
18 suffered by their arrests on Oahu. They suffered in the
19 cause of peace, by these associated with you before me
20 tonight. To those who have suffered, take heart and be
21 at peace, for you are respected. You stand before your
22 aumakua without shame. The creator of us all is the
23 fundamental presence in our lands of Hawaii Nei, our
24 Hawaii.

25 I, as many others tonight, rise to be heard in

1 public protest of the continuing expansion of the U.S.
2 military in Hawaii Island and in Hawaii kapae aina, the
3 collective islands of Hawaii. I am against spending of
4 tax dollars to plan a Stryker Brigade.

5 I'm Mikahala Roy, Executive Director of Kunana
6 Hui Honua, Foundation of the Search for Wisdom. I
7 tonight represent myself, my family, and this (inaudible)
8 community nonprofit. We are kanaka maoli, then, Hawaiian
9 people of the bloodlines that originated here, seeking to
10 preserve the identity of ourselves in our homeland. We
11 are also joined by those who are of Hawaiian heart, who
12 may be from other homelands. They will help us form
13 Hawaii's future.

14 Our organization is one that exists to protect
15 Hawaiian heritage and identity for future generations.
16 We work to protect, identify, and further understand
17 Hawaii sacred sites, our connection with our land. We
18 work to help identify and support ohana, to establish
19 kahu for sites as we seek understanding of the outer
20 landscapes of our inner light. We work on the education
21 to the use of the future and to build our libraries in
22 our own neighborhoods where culture lives. They will
23 serve the living public as we nourish and protect
24 important land places.

25 Cindy S. Barger's office will receive this

1 written record of mine, and I would like answers to the
2 following questions provided directly to myself, in
3 writing, by the Army.

4 In the land acquisition planned -- Number 1, in
5 the land acquisition planned by this Draft EIS, how will
6 the Army compensate for the loss of education of Hawaiian
7 history and lore of the heritage that comes from
8 Hawaiians being upon the land?

9 Number 2, what will the Army give toward the
10 perpetuation of heritage and identity of the indigenous
11 Hawaiian people that these lands will no longer be
12 available for in the event this takes place?

13 Hawaii moku a keawe is rich in the lands that
14 help us know ancient history of our people.

15 How will the Army educate Hawaiian families as
16 to their genealogies associated with the lands the Army
17 seeks to occupy and destroy?

18 There should be no further military expansion in
19 lieu of the fact that live ordnances have been found all
20 over Hawaii Island and that they endanger present and
21 future generations of human and environmental life.

22 Four, how do existing conditions of danger and
23 more dangerous conditions generated by expansion of the
24 Stryker Brigade meet, for example, Linda Lingle's plan
25 for the promotion of a safe Hawaii for visitors?

1 Five, how does the Army address its destruction
2 of religious sites and religious landscapes it seeks to
3 occupy? How will it make restitution?

4 Six, how will the Army compensate for the
5 destruction of the living spirituality of the Hawaiian
6 people and those who travel to Hawaii for such purpose?

7 Seven, what will the military do to assure the
8 keeping of the original trails and paths, those protected
9 by Queen Liliuokalani?

10 I am just honored to be among the many of us
11 tonight and to hear the testimony that's been given. I'm
12 thankful to Jim Albertini, very proud to meet him
13 tonight, Kealoha Pisciotto, all of you who have
14 participated and have paid your comments. This is more
15 valuable than some days -- than many days of life. This
16 is why it's important to come.

17 I'm from Kona, and I was on Oahu. I flew in
18 tonight because I missed the other opportunities, and I
19 will not miss -- you cannot miss an opportunity of life
20 that has -- you must show and participate. You need to
21 hear my voice. But you also should be very aware that we
22 are aware that you've not provided adequate hearings in
23 the communities.

24 50 percent -- 56 percent of military lands in
25 Hawaii are crown and government lands, now known as ceded

1 land. I am prompted not only by the testimony but by ke
2 akua, because -- I bring these posters tonight because
3 our people have been so oppressed on Oahu; and they're
4 very in keeping with comments made earlier.

5 Native Hawaiian culture, the real endangered
6 species. What will be your legacy?

7 Army transformation equals Hawaiian desecration.

8 Protecting our culture and environment. It's
9 not just our right, it is our responsibility, is what
10 Mr. Kamakawiwaole just said.

11 Federalization of Hawaiian people means
12 militarization of Hawaii's lands.

13 The Akaka Bill as it presents today promotes the
14 expansion of the U.S. military upon more and more of the
15 lands that belong to the Hawaiian people, members of the
16 Hawaiian Nation. I cannot forgive both Senators Inouye
17 and now Akaka, who have consciously left Hawaiian people
18 out of the decision-making processes for actions and
19 legislation that would change the integrity of a people
20 of the earth forever. These actions are unconscionable.
21 However, what would be worse is if we failed to stand in
22 opposition and resistance to these actions. Resist the
23 Akaka Bill for all it means against the identity and
24 well-being of na kanaka maoli and those kanaka maoli of
25 the heart. We would never be whole absent of our land.

1 Work to organize in your communities. The government we
2 would confirm. We will be well as we remember we are
3 one. We can take the time necessary to develop and heal
4 our nation by the very fertile and robust minds, the
5 loving and exceedingly able hearts among us. As you work
6 in your communities, do the same. Let us all know who
7 work to keep Hawaii, who are her guardians, strong
8 constituents, and components of her future identity. We
9 will know our own. And we will be those of any race who
10 wish to live in peace, to love the lands of Hawaii and
11 each other.

12 Aloha kekahi kekahi. This is in the rhythm of
13 our name. Ha, the breath, wai, the spirit, i, the sacred
14 name of most high God. Might is not right. Ua mau ke o
15 ka aina i ka pono. Pono, balance, is that which is
16 worthy of our efforts.

17 I feel Kealoha Pisciotto's comments tonight and
18 all of -- of others are so very important. I will share
19 something that has been given in our adversity at Kailua,
20 where -- sacred land that kamaka honu means the eye of
21 the turtle has been further desecrated, just like Mauna
22 Kea tries to be. We speak of the eye of the world,
23 someone spoke. What's been raised in spirit is the
24 discussion of kamaka honu, the eye of the turtle, that
25 form which is associated with almost every culture on

1 earth, mother, sacred mother. Imagine, what would be the
2 center of us? All of the people who spoke tonight spoke
3 in spirit. Could this be why, perhaps, a center of us
4 was chosen at a certain location by a king, Kamehameha?
5 We all know that far before Kamehameha this was a land
6 where the greatest sin was to hurt another in thought,
7 word, or deed. The warriors were much after a time of
8 our original people; and I rejoice in that truth. And I
9 am happy that others also speak of that, for that is so.
10 That is our name, Hawaii. And Reynolds also spoke about
11 responsibility, or someone did. That was Lawton Kipapa.
12 Responsibility is a huge word.

13 There is a woman who is our hostess tonight who
14 wears a maile, a lei maile. This is an example of
15 something that will teach us to take the responsibility,
16 that this will leave this earth if we are not careful and
17 protect this lei. It is a sacred lei. It will continue
18 to teach us how to be human beings. So I believe that's
19 Ms. Barger, if I'm pronouncing her name right. I notice
20 she dons the lei. I teach all my students that this is
21 what we have to do, because we are the lei. And we must
22 aloha kekahi kekahi.

23 I resist this proposal for this Stryker Brigade
24 and everything associated with it.

25 Thank you for your time.

1 MS. AMARAL: Keonipa'a, followed by
2 Andrew Walden.

3 I think I had called first Keonipa'a; and then,
4 after that I had Gianna.

5 Is that correct?

6 If we could have Keoni come up, that would be
7 helpful.

8 MR. KEONIPA'A: Aloha.

9 Aloha to our virgin occupiers. And it's kind of
10 good to see you again and kind of not. So some different
11 faces this time. There's different faces this time I see
12 representing the base up there.

13 But that's fact in international law, yeah,
14 permission to march troops through a neutral country or
15 anybody's territory can never be implied. That means you
16 guys are taking your own, again, permission to march your
17 troops through the Kingdom of Hawaii's domain. Our
18 dominion is denied for the fact of you attack another
19 foreign country, which is Afghanistan, and another
20 foreign country, which is Iraq, and you're occupying both
21 of those countries, as well as Hawaii. You are occupying
22 my country. Now, you guys have marched troops through
23 our country, through this neutral soil -- because we are
24 a neutral territory, okay. So that's a violation of
25 international laws, and you guys have done that already.

1 Now, this comes from the pohai ali'i. This is the guys
2 that you signed the treaties with. That's my ohana.

3 Now, another side is being a descendent of
4 Mary Parker. Parker Ranch is my ohana's land, and you
5 guys are about to steal it, 23,000 acres, okay.

6 This is teak wood. It's the furniture wood. No
7 more purple underneath. It's not myconia. This right
8 here, we planted on this land, okay. This here
9 represents in 15 years from the day that you take
10 possession of this land, two billion, one hundred
11 thirty-nine thousand -- million dollars. Two billion
12 dollars right here in 15 years. That's what that -- the
13 value of that land is worth. Now, one-third of that
14 money would supply funding for all Hawaiian entitlements.
15 That's 700 million or so, one-third of that money from
16 this 23,000 acres, planting teak. This is from my yard;
17 I'm growing it. So that's 2.1 billion dollars that we
18 will be missing from our treasury in 15 years to the day.

19 There's a guy from California, he's in Costa
20 Rica, and he's making \$93,000 per acre, times 23,000, two
21 billion dollars that you owe the Kingdom of Hawaii
22 treasury within 15 years of taking possession. That's
23 for one. That's this. And this is the cheap stuff, now.

24 This is sandalwood. I picked this from
25 Pohakuloa. This is in your new expansion -- where you're

1 doing your expansion. This is worth more than this. And
2 that's two billion dollars, just from the land you want
3 to use up here. This is land that -- this is land that's
4 supposed to be used for the production of food and
5 everything else for our people. You're not taking care
6 of our people. You're just stealing from them, stealing
7 the resources, stealing the land that is -- that could
8 furnish resources. You're stealing from our people, and
9 you're not doing nothing to repay for what you guys
10 taking. You guys have too much already. Just go home
11 and leave the bases.

12 Now, let me talk about defense of Hawaii.
13 Hawaii's an archipelago. We got low land around here.
14 You can get here only by ocean or by air. So pretty much
15 obsolete or useless is an Army and tanks and that stuff,
16 other than military occupation of this country. You
17 can't use that. That's not for defense of this stuff.
18 If you want defense, we do missile defense system and the
19 Navy, maybe even a little bit of Air Force, not this
20 Stryker tank; it's not for defense of Hawaii. If you
21 want to talk about defense, talk about air missile
22 defense systems or something, not what you guys trying to
23 pull here. You guys have a lot of bases. Some serious
24 problems with all of your old bases. And not just yours,
25 but mainly Pearl Harbor and some of the other bases on

1 Oahu. There's a lot of pollution. There's -- and you
2 guys have no title. You guys don't have anything. You
3 got no right to be in our country. You're in the
4 dominion of the Hawaiian Kingdom. Now, you need to
5 remember that. And this is our country. It's not to
6 protect the United States. Our job is to protect Hawaii,
7 not to protect your country. So a lot of your stuff, we
8 don't need over here. And the only things that we want
9 for protection of Hawaii -- now, this is serious
10 protection, now. And you guys have a lot of good bases
11 you built on our -- violating entrenchment laws,
12 violating the laws of nations and laws of occupation, the
13 laws of war, okay. This all come in. And because of
14 this and denial of passing troops, that means if you
15 bring this stuff in here, that's an act of aggression
16 against the Hawaiian Kingdom and will be viewed as that.

17 Now, you guys think you gonna expand your base
18 up there? You're gonna have permanent people, now, on
19 our aina, okay. This is not a rec place for you guys
20 play around. And you guys -- you make a (inaudible)
21 problem with some of you guys touching a girl in Okinawa.
22 That was one huge mistake over there, okay, and we're not
23 gonna stand for that over here. We don't have the stuff
24 that you guys need for your R&R. You know, we got
25 teenage girls over here. You know, we don't have the

1 stuff to take care of your men, okay. That's only our
2 ohana over here. And if you raise guys, then you better
3 keep them restricted to your base and not coming to the
4 ohana (Hawaiian), our people.

5 You're bringing the Strykers, and it is a direct
6 violation of our sovereignty, of our dominion. And if
7 you guys don't have the strength to leave us alone, to
8 leave us, maybe you should be put on a vitamin plan,
9 One-a-Day, just like some other places that showing us
10 how it really is, because you're gonna be out of there
11 before you're out of here; I can see it already. And
12 they have the key.

13 Now, we have the most highly trained guys over
14 here. They are so strict that we never shoot one shot at
15 you guys, and you can take plenty, okay. We never touch
16 you guys. We are strictly sticking to laws of nations,
17 okay. That means we as a neutral country have some rules
18 to follow, and you guys are not following them, and we
19 are. Now, if we have to do something else, well, so be
20 it. We are not going to let this happen. And you need
21 to search your soul. I know you have -- you're under
22 orders, and that gives you some -- well, you don't have
23 to take it upon your own personal soul because you just
24 following orders. You know, I understand that you guys
25 aren't doing nothing.

1 I'm glad that some of this is being recorded,
2 because we had a meeting up in Waimea just last week
3 that -- all the big Hawaiian groups and stuff, that we
4 had a lot to say, but nothing was recorded; nothing was
5 written down. It was a meeting just for nothing. And we
6 got no answers.

7 Let me talk for a second about this -- your EIS.
8 Your EIS is a joke. I looked at this and am very
9 disappointed at the effort you guys put in there. You
10 dig up a 20-year-old water study for Pohakuloa. That's
11 20 years ago. You know, you guys, you not putting
12 nothing, no effort into this.

13 I'm very disappointed on the protection of the
14 cultural. Even the environmental, you guys have no
15 solution. You talk about the lead contamination in there
16 and how the workers might have to wear masks and stuff,
17 and you worried about further contamination by that stuff
18 spreading. You need to control that and take it
19 someplace to mill out or whatever, refine your lead and
20 get that contamination out of there. You guys need to
21 clean up your mess before you can get anything else. So
22 I think -- I think -- I just need to tell you guys that
23 you guys better be careful, that this is all under
24 international laws. You need to respect international
25 laws, laws of nations, laws of occupation, laws of war,

1 the law of the sea. All of these are being broken by the
2 United States.

3 Well, I'm going to say a short chant here. This
4 is a cleansing chant for you because -- oh, okay.

5 MS. AMARAL: We have no problem with him
6 speaking. We're speaking about something. Excuse us.

7 Mahalo.

8 Just to clarify, I had asked Keoni if he would
9 do the closing pule, and he will. But I have a few more
10 speakers that we have to do, so it's not appropriate to
11 close yet.

12 Gianna S., followed by Andrew Walden, followed
13 by Ilima Long.

14 MS. GIANNA S.: Our testimony is going to be the
15 same song we sang last night. So any of you that
16 remember it, that would really help. Music really adds a
17 lot, so please join us.

18 Don't bomb the mountain. Leave the mountain
19 alone. Don't bomb the mountain. The mountain is our
20 home. Don't bomb the mountain. The mountain is alive.
21 The mountain, the mountain must survive.

22 Don't bomb the mountain. Leave the mountain
23 alone. Don't bomb the mountain. The mountain is our
24 home. Don't bomb the mountain. The mountain is alive.
25 The moutain, the mountain must survive.

1 Don't bomb the mountain. Leave the mountain
2 alone. Don't bomb the mountain. The mountain is our
3 home. Don't bomb the mountain. The mountain is alive.
4 The mountain, the mountain must survive.

5 Thank you very much for allowing us to add that.

6 A friend of mine fell sick, so she wasn't able
7 to deliver her own comment, so I'm going to be reading
8 them for her. It's called "Solutions". She says, We
9 need to look at the reasons we have military to solve
10 this problem. We must eliminate the need for the
11 military. To do this, we must look at the reasons we
12 have a military. One main reason, there are warriors
13 gathering resources. We must take personal
14 responsibility for our own fuel if we don't want to send
15 the military out with bombs to retrieve it from foreign
16 countries. The information is available to create our
17 own fuel. As individuals and community, we must come
18 together to reach sustainability with fuel, food, and
19 water. I ask that we move towards creating our own
20 bio-diesel, growing our own food organically, and
21 protecting our water resources. Real solutions, not
22 fighting. Aloha. Mahalo. And she ends it.

23 I just have one question myself. My question is
24 this: The most important person seems to be missing from
25 all these hearings, and I want to know if Donald Rumsfeld

1 is going to be watching all these hearings, if he's going
2 to know the sentiment, if he's going to see the tears,
3 and if he's going to really care enough to stay up this
4 late after putting in this long before he makes his
5 decision.

6 Thank you.

7 MS. AMARAL: Andrew Walden, followed by
8 Ilima Long.

9 Andrew, are you still here?

10 Okay. Andrew is not here anymore.

11 Ilima?

12 Here she comes.

13 MS. ILIMA LONG: Aloha kakou. My name is Ilima,
14 and I am Native Hawaiian. And by chance I'm the last
15 speaker tonight. I wasn't planning on coming up. I was
16 planning to come here to listen and observe. But one of
17 my kupuna here asked me to come up and share my mana'o,
18 and that's what I'm going to do.

19 So I guess in closing I want to ask those of you
20 here that are representing the Army and the U.S. military
21 and the United States to take in the things that my
22 kupuna have said tonight and to not go home and try and
23 justify all the reasons why, you know, Pohakuloa is
24 needed to further military training, or whatever it is.
25 Because, you know, I think you may see it, but at this

1 point in time there's a progressive movement to progress,
2 quote/unquote, freedom or liberty for those around the
3 world about the fallacy and what the U.S. military is
4 doing right now, and the (inaudible) right now is not
5 progressive; it's completely regressive to humanity, to
6 caring for the land, to caring about people, about
7 indigenous people, about cultures, and about everything
8 that enriches life.

9 And I guess that's all I want to say is, please
10 do not go home and try and justify this. And I have a
11 feeling that this whole thing is a decoy, that -- you
12 know, to show the people of Hawaii and Hilo that the U.S.
13 military gives a crap about what they think. I have a
14 feeling that this thing will go on, no matter what. But
15 if that is not true -- I can't imagine, first of all, the
16 things that were being said tonight not resonating with
17 you. So if it did, please pass it on to those above you.
18 I really don't have any faith in Donald Rumsfeld. Maybe
19 I have faith in you, and maybe I have faith in the -- you
20 know, a small amount of faith in the motive of this whole
21 hearing, but I don't have faith in him. But, you know,
22 if this -- if this meeting holds a point, please pass on
23 whatever it was that resonated with you. And I know that
24 something had to have, because it all makes perfect
25 sense. And when you think about what is going on here

1 with this land, with this culture of people that honestly
2 care for the land, care for the people, perpetuate things
3 that are beautiful, standing up here and speaking against
4 bombing their mountain -- I don't know if -- have either
5 of you gentlemen seen the latest U.S. -- goArmy.com
6 commercial? Have you? Have any of you?

7 MS. AMARAL: Dr. (Inaudible) testified on that.

8 MS. ILIMA LONG: It's pretty disgusting. It's
9 really disgusting. It has a boy -- whatever, an American
10 boy that says, My name is so and so and I'm from
11 Pahakaloe -- or, you know, I work in Pakaloe, Hawaii,
12 and, you know, this is my job; and then there's a black
13 screen with white writing that says, One man, whatever
14 amount of explosives, one volcano; and just about -- just
15 right when he's about to blow up whatever he's blowing
16 up, it says, For more, go to goArmy.com. That is not
17 what this part of the world is about. It's so
18 disgusting. And that is what is going on, you know.
19 That is exactly what the Pohakuloa expansion is about.
20 It's the opposite of what the Hawaiian people, the
21 Hawaiian culture, and it's the opposite of what is good
22 for the world is about. It's blowing up -- it's thinking
23 that man rules the world, and everything here on this
24 earth is for -- at our disposal and for us to rule; and
25 that's not -- that's not right. That's going to, you

1 know -- it's going to end us all in no time.

2 And I guess that's all I have to say.

3 And I want to thank my kupuna for inspiring me
4 and for teaching me. And that's all.

5 Mahalo. Aloha.

6 MS. AMARAL: Mahalo.

7 We've come to the end of the testimonies this
8 evening.

9 And now I'd like to invite Colonel Anderson to
10 come up and make some closing remarks before we have a --
11 the closing pule.

12 Colonel Anderson?

13 COLONEL ANDERSON: First off, let me thank
14 everybody that's stuck this out till -- I've got 12:45.

15 But, first off, let me also say I want to
16 personally thank everyone who came here tonight. All of
17 the comments, written and oral, will be taken into
18 consideration as we work towards completion of the Final
19 Environmental Impact Statement.

20 I also want to thank you for the heartfelt and
21 genuine concerns that people have demonstrated this
22 evening, and I do personally appreciate that; and it will
23 do nothing but help improve the decision-making that goes
24 on after this.

25 For anybody that did not have the opportunity or

1 did not feel compelled to give oral testimony this
2 evening, we will continue to take written comments
3 throughout the extended public comment period, that right
4 now is scheduled to end on January 3rd, 2004.

5 Again, thank you all for being here this
6 evening. Thank you.

7 MS. AMARAL: We have asked, and he has
8 consented, Keonipa'a to do the closing 'ole. And I think
9 that he has selected two 'ole to do this evening. And
10 I'll let him explain.

11 MR. KEONIPA'A: This first chant is a cleansing
12 chant. And this is to cleanse all the hewa that has
13 fallen on top of you and to take it away. And I'll say
14 it slow.

15 (Closing pule.)

16 Okay. This is an ancient chant for cleansing.
17 And we usually do this with a physical cleansing. And
18 one of the best places we do it is right here at Coconut
19 Island. This mohuala is a puhonua. It's just outside.
20 And a lot of the ali'i people is put under this rock, and
21 we go out there and we do this cleansing chant. And it's
22 just to -- (Hawaiian) is to put to rest all the
23 mistreatment. (Hawaiian), you mistreat somebody, you
24 treat them badly, and this is to put an end to this
25 mistreatment.

1 (Hawaiian) is a long sleep, endless sleep, you
2 know. (Hawaiian) is -- you know, you clap. And this is
3 to -- (Hawaiian) is to disperse, like smoke or like vapor
4 or something into the atmosphere and then gone; so it
5 disperses, (Hawaiian). (Hawaiian) is really defilement
6 and all the bad stuff. So (Hawaiian).

7 And then the next one is (Hawaiian) is freedom
8 of the (Hawaiian); there's a relaxing of the kapu. And
9 (Hawaiian) means free the whole earth. So that's the
10 chant that I did for you guys.

11 And then I have one more. This is a chant --
12 it's a prophecy chant that was for Kamehameha. This was
13 for when he was a young chief, and this was written for
14 him. It's an old one, and it's very true to today.

15 (Closing pule.)

16 (Hawaiian) what is up will come down.
17 (Hawaiian) what is below will rise up. (Hawaiian) is to
18 unite the islands as one. (Hawaiian) is to build the
19 walls or build our country. Our country will stand
20 straight like the walls.

21 So, anyway, that's my two chants for tonight.

22 Mahalo.

23 MS. AMARAL: Mahalo.

24 We thank all of you for sharing yourselves this
25 evening. And it's -- we thank you for being so generous

1 with us. We hope that you all will return to your
2 families in safety. Until we meet again. A hui hou.

3 (The proceedings were concluded at 12:47 P.M.)

1 BREAKOUT SESSION

2 Thursday, November 6, 2003 at 5:30 p.m.

3 --oOo--

4 MS. HANNAH REEVES: My name is Hannah

5 Wahinemaikaeo'kaahumanu Keliulanaueole'okalama Kane

6 Reeves. I am the living descendant today of Kuwa, and the

7 land that Pohakuloa, that the military is training on, is

8 my ancestors' land. And it comes under Ape, and the

9 prophet is Kaula. There are thousands of us living today,

10 and I want to mention about all the site numbers.

11 Site 20872, 20873, 5002, 20856, 2854 -- 20854, 20855,

12 20864, 20877, 20862, 7119, 306, 513, 21148, 325, 324, 323,

13 22 -- 322, 315, 316, 118, 127, 20873, 20852 is the

14 historical burial site, 154, 170, 20862, 20856, 20865,

15 20869, 20872, 20877, 20873, 20864, and 20878, 10369, 20855,

16 21150, 20878, 20870. I want to mention 20877 is the

17 historical site.

18 Another Site is 50-10-31-5002, site 50-10-21-20855,

19 site 50-10-31-14638, 50-10-32-20865, 50-10-32-20877,

20 50-10-32-21150, 10309 is in the center of Ape.

21 50-10-33-20878, and I'm claiming the pu'u, which is the

22 trail, and there are many that were destroyed by the Army

23 since 1930 because they run the bulldozer on the dirt or

24 whatever they wanted to put on it.

25 I don't know how much more that they have destroyed,

1 but these are all the numbers that I claiming because I am
2 a direct living descendant, and my mom is Victoria Kunewa
3 and my dad is Nui Kane and we come from that line of Ape.

4 My address P.O. Box 844, Kailua-Kona, Hawaii.

5 They're saying that these are the sacred sites that I am
6 concerned about, and I want to make sure that nobody run
7 over.

8 --oOo--

9 6:30 p.m.

10 MR. DWIGHT VICENTE: My name is Dwight Vincente, and
11 I want to say that I know tonight is about the EIS, but I
12 want to go before that, back to the beginning. And that is
13 looking at the history here in Hawaii, going back to 1893,
14 and probably even further back, 1887. We have American
15 citizens participating or holding public office which is
16 contrary to U.S. Constitution, and also they wrote the
17 Constitution -- the 1887 Constitution which Kalakaua was
18 forced to sign, and they secured the right to vote and I
19 happen to question that whether they could vote being U.S.
20 citizens in a foreign country to be recognized by treaty.

21 In 1893, what they call overthrow, and then you have
22 the provisional government proclamation of the provisional
23 government stated that they were self-proclaimed, not
24 recognized by any nation through treaties. As a matter of
25 fact, they could not sign any treaties because they U.S.

1 citizen. The only person who can sign as a U.S. citizen is
2 the President under Article II, Section II -- Clause II, I
3 should say, and that's why in 1894, Hawaii was never, if
4 you could call it, annexed. There was no such authority in
5 the U.S. Constitution for them to annex. So they had wrote
6 the Constitution of the Republic of Hawaii which joined in
7 1887, which had treaties signed by King Kalakaua which were
8 to expire in 1898, and that being the case, they couldn't
9 sign treaties. They joined the two constitutions together,
10 the Kingdom's Constitution which had treaties, and the 1898
11 Republic Constitution which had no treaties, meaning it was
12 never recognized in the family of nations.

13 And in 1898 they had stated that they transferred
14 Hawaii over by treaty of a joint resolution, which is
15 impossible, and from that point on we were considered a
16 territory of the United States, which is referred to in the
17 U.S. Constitution's Article IV, Section III, Clause II.
18 And if one was to actually read what's written in there, it
19 says, Congress shall prior to dispose of and make all need
20 for rules and regulations respecting the territory, and the
21 territory they was referring to was only the Northwest
22 Ordinance, which happened under the articles of
23 Confederation. And the document never continued when they
24 adopted a Constitution, and it refers to only Article V.
25 And a lot of the lands the United States is claiming to

1 have jurisdiction over is based on misuse of that document,
2 the Northwest Ordinance which does not give them any
3 jurisdiction. And that's one of their claims.

4 If you read various documents, they always site the
5 Northwest Ordinance. Down verses Goodwill is a good one.
6 What it is is that the United States has no colonial
7 powers. The word territory colony has the same definition.
8 Why write a new word if they actually had colonial powers?
9 They actually have no powers to colonize.

10 Then you have -- like in 1959 they -- well, let me go
11 back to the 1900 Organic Act. Then you have the 1959
12 Admission Act in the state constitution. So if you look at
13 the joint resolution of 1898, the 1900 Organic Act, the
14 1959 Admission Act and the state constitution, they all
15 refer back to the U.S. Constitution being the controlling
16 law over those four documents.

17 I believe that was the biggest mistake they made was
18 to cite the U.S. Constitution as the controlling law,
19 because what it did there was it actually nullified each
20 and every one of those documents rendering the documents
21 useless. So until today, we're still an independent nation
22 minus a government to run the islands, and this holds true
23 also with other lands, Cuba, California, Alaska, Florida,
24 Philippines, Guam, Samoa, Micronesia, Puerto Rico, Panama.
25 They all were placed under the Northwest Ordinance, which

1 is impossible, according to the documented history and the
2 U.S. Constitution.

3 So there is no -- actually, there is only 13 states
4 today that make up the United States. There is not 50
5 states. The 37 are called incorporated. They're actually
6 corporations. They don't have the status of a state -- the
7 word state, which is defined in the last paragraph of the
8 Declaration of Independence as being a nation.

9 The Territory of Hawaii which wrote the state
10 constitution is not considered a nation. They had no
11 treaties. Until today it is still landless, so there is
12 conflict in law right now, and it's the conflict between
13 the history -- documented history here in Hawaii and the
14 U.S. Constitution. I believe the U.S. Constitution will
15 prevail though. It was set up to be that way. So I guess
16 that will be it. Thank you.

17 --oOo--

18 6:45 p.m.

19 MS. LYNN VROOMAN: My name is Lynn Vrooman. I just
20 wanted to say that we wouldn't be here at this meeting
21 today if it wasn't for the military acquiring more land.
22 If they maintain -- if they maintained their same land and
23 did the Stryker force there, they would have cleaned up the
24 land in order to make it so that they could, and they're
25 not doing that. There's no concessions. There's no --

1 it's just a demand for more land in order to do the
2 Stryker, and buildings and all that are fine. I have no
3 problems -- we have no problems with the Strykers being
4 here, but it's the acquirement of more land instead of
5 using the land they have and cleaning it up so that they
6 can use it. So that's what the people here are against.
7 And that's why I'm here.

8 There was one other point, but I don't remember it
9 right now. Thank you.

10 --oOo--

11 7:15 p.m.

12 MR. WILFRED SUGIYAMA: My name is Wilfred Sugiyama.
13 The world's most powerful country today is the empire of
14 the United States whose President dictates who can live and
15 lead in a foreign country. Being an empire, the United
16 States wants the most advanced military power on the
17 ground, sea, and air to better control the world in the
18 name of peace.

19 The United States Military already have the smart
20 bombs and continue to create new weapons for specific
21 individual war zones to be attacked upon command. With all
22 that advanced and new warfare of the future, why is the
23 United States Military still shooting and bombing our
24 fragile aina and playing war games on an island considered
25 pristine from the ocean to the mountain?

1 Why is the United States Military that we want to
2 support is so insensitive to our islands called paradise?
3 Having a fragile ecosystem, unique rainforest, leaving
4 matters near extinction, and not to forget the most race
5 and culture of the Hawaiians. It behooves the military to
6 start using Hawaii only as an R and R destination instead
7 of a devastation dump.

8 I was stationed at Fort Hood, Texas, home of the tank
9 brigade. Common sense tells me that the Stryker force
10 would definitely be best suited at Fort Hood, Texas with
11 their massive land base and conditions which is similar to
12 Iraq. Kaho'olawe is officially being returned to the State
13 of Hawaii in a condition that is shame on the United States
14 Military because the \$300 million did not free it from
15 harm's way and danger. Kaho'olawe is being returned as a
16 danger zone. Why is the U.S. Military continuing to
17 pollute and bring danger and harm to your own U.S. citizens
18 and homeland which you claim to protect and defend in the
19 name of peace and harmony?

20 Sign says Makua, Pohakuloa, and now extending to
21 Kahuku. So irresponsibility on the military's part. The
22 \$650 million so-called economic boost to Oahu, will only
23 end up another military creation of a junkyard full of
24 pollution. I believe what the military is seeking is not
25 in beautiful Hawaii, but at Fort Hood, Texas with minimum

1 costs and -- and unlimited destruction. Trust me, Fort
2 Hood is your place. Thank you.

3 --oOo--

4 7:25 p.m.

5 MS. CATHERINE BECKER: Catherine Becker. About ten
6 years ago I was harvesting moleen. It's a flower to make a
7 remedy for ear infections on Mauna Kea, and we could hear
8 the bombing and it got really close, and we were just
9 parked by the side of the road and it got very, very close
10 and then there was a screech and a car went out of control
11 and it was a garbage truck driven by a Hawaiian man, and he
12 had tipped and all the garbage was all over and he was
13 laying in the middle, and the bombs were going down, and to
14 me, it was a symbol of what happens when the garbage falls
15 from the -- on the mountain.

16 And I don't know if he was distracted by the screech
17 of the bombs and lost control of the truck or what, but it
18 made a dangerous -- it was myself and two friends and two
19 young children and we were definitely felt -- like you
20 could feel the shocks. So, they were missing or they were
21 too close or I don't know what, so that's my statement.

22 --oOo--

23 7:30 p.m.

24 MS. MALIA BECKER: My name is Malia Becker Kaley
25 Jean. When I was -- when my mom was putting on this video

1 game for me to play, my mom said don't go outside because
2 her heard these bombs falling, and I said I will go and
3 look by the door what it is.

4 --oOo--

5 7:45 p.m.

6 MS. LYNN VROOMAN: Lynn Vrooman. I asked two
7 questions prior to the meeting, and on the second question
8 he said that Donald Rumsfeld is the one that makes the
9 final decision. Donald Rumsfeld is not an elected official
10 of the United States. The people did not elect him. He
11 owes no alliance to the people of the United States. He
12 was appointed as a member of the cabinet by Bush. As such,
13 he has no -- he doesn't even have to read any of these
14 comments, and his decision is based on just what they plan
15 to do, but our voices will not be heard because we didn't
16 elect him. Everybody needs to hear this. That's it.

17 --oOo--

18 8:00 p.m.

19 MR. DWIGHT VICENTE: My name is Dwight Vincente. I
20 want to give testimony by stating that there's
21 Constitutional violations. The Article in Section VIII,
22 Clause XVII, the military bases should be in the United
23 States. And by the way, there's only 13 states, that's why
24 there's only 13 stripes on the flag, and if you look on the
25 history, you're going to find out that there were no more

1 states added because there's Article IV, Section III,
2 Clause I violations.

3 So -- and the other thing is the taxes spent for
4 military is only Article I, Section VIII, Clause I, duties
5 imposed on excise. They're using right now the
6 16th Amendment income tax to fund military, which is
7 illegal. Article I, Section VIII, Clause XII, no moneys
8 can be appropriate for a term longer than two years.

9 I don't know if I mentioned earlier about the
10 Northwest Ordinance. United States has used that to usurp
11 power. That's Article IV, Section III, Clause II. It only
12 applies to Northwest Ordinance, not Hawaii, not the
13 Philippines, not Guam, not Puerto Rico, not California, not
14 Florida, not Alaska, none of those places.

15 Okay. I think that's it for now. Unless I remember
16 anything else.

17 (Further proceedings were had on the following page.)

18 --oOo--

21

22

23

24

25

1 8:38 P.M.

2 --o0o--

3 MR. GENESIS LEE LOY: My name is Genesis Lee
4 Loy, and I'm from Hilo, Hilo, Hawaii.

5 Mauna Kea and Mauna Loa are among the largest
6 mountains in the world. We Hawaiians look with wonder
7 and pride at them. The world and their technology look
8 with greed as to what can be accomplished here. The
9 astronomy society of the world need to protect our water
10 resources, our environments, and other concerns
11 enumerated over the past two to three years regarding the
12 buildup of the telescopes on Mauna Kea.

13 And in regards to the Stryker, the
14 politicians -- the county politicians, the state
15 politicians, and the national politicians -- and the
16 media need to adopt a practice of peace.

17 Allowing the Army to further desecrate our lands
18 to practice violence cannot and should not be allowed.
19 Violence will not and violence cannot reduce the number
20 of enemies and the terrorists. Violence only creates
21 more hatred, more violence, more terrorists on both sides
22 of the equation.

23 The Army are not good stewards of our Hawaiian
24 lands here and in our Hawaiian archipelago, as
25 demonstrated in these hearings to date.

1 Is there a timetable for the occupying Army and
2 Armed Services to vacate our islands? Will this question
3 be addressed?

4 As Hawaiians, we have lived under martial law
5 and were treated as terrorists at times at World War II.

6 Further, Genesis Lee Loy says not.

7 ***

8 8:50 P.M.

9 --oOo--

10 MR. THURMOND SPLENDOR: I'm Thurmond Splendor of
11 earth, and I came here to speak in opposition to the
12 proposed military expansion at Pohakuloa Training Area.

13 I would like to discuss the ili (sic) for a
14 minute. Of course, ili (sic) is the bones that carry the
15 mana of the ancestors of Native Hawaiians.

16 I'm a (inaudible) archaeologist. I have
17 experience with dealing with ili (sic), both on the
18 mainland and on the island of Hawaii.

19 The Environmental Impact Statement with regards
20 to archaeology delineates 250 known sites. My experience
21 in Hawaii has been that there are burials at every
22 archaeological site, some of which are recorded and
23 documented and most of which remain unknown.

24 And in those regards, I'd like to address
25 Donald Rumsfeld, Secretary of military oppression.

1 Does he want to desecrate the ili (sic) of his
2 ancestors with 20-ton weapons of mass destruction?

3 I would hope that he would say no. He needs to
4 realize that the entire island of Hawaii is one big
5 cemetery and that -- most of which are located in a
6 position where you can never find them, you know. And
7 it's a shame that the mana of the sovereign people of
8 Hawaii will be desecrated with these weapons of mass
9 destruction.

10 And the only other point I would like to make
11 is, for those people who are in attendance that are
12 interested in liberating oppressed people, maybe we
13 should look to liberate Hawaii. It's about 110 years
14 overdue.

15 Aloha nui.

16 ***

17 9:21 P.M.

18 --o0o--

19 MR. ALIHIKAUA KANAELE: My name is Alihikaua
20 Alii Sir Kaliko Kanaele, with the heia mamalo oheluilua
21 of the Royal Order of Kamehameha I.

22 This is more of a statement than testimony. I
23 would like to talk about good stewardship and then
24 different things.

25 We ask that the Army look into being good

1 stewards and that we work together to clean up our areas
2 before we need to have more land to train on. And we
3 have ten Kaho'olawes, and we need to clean those up.
4 We're now having ceremonies to regain back Kaho'olawe.
5 It's not finished. Spent 400 hundred million dollars.
6 You gave 6 million to the Commission. They didn't do
7 anything. It's not totally clean. I know it's the Navy,
8 but the track record has not been good. So as far as the
9 order concerned, we'd like to see you become good
10 stewards before you ask for any more land.

11 Thank you.

12 ***

13 9:34 P.M.

14 --o0o--

15 MS. ANGELA SMITH: I appreciate the opportunity
16 as a citizen to speak. Citizens have the responsibility
17 to safeguard our democratic civil liberties, especially
18 these days when the socio-political arenas seem so
19 politically apocalyptic.

20 I think the Army is pretty civil in providing
21 this forum for reasonable discourse. I mean talking
22 story. Because I've even got turned down from having my
23 say at one of the -- at the one International Conference
24 on Critical Thinking. I had to demonstrate outside.
25 And, believe me, they don't live at the one castle in the

1 sky. They used to make a living, even, selling the
2 critical thinking dialogues and skills, and they didn't
3 want me to have my say back then regarding my grievance
4 back in 1999. But, with humor, having worked with them
5 and the leaders of the critical thinking movement of the
6 California way of things, believing in the dialogue and
7 the opportunity to have a forum to speak on peace and to
8 have our say as citizens, I feel, I think, the Army is
9 being fair in providing a forum.

10 I work at the local schools. I've worked up and
11 down the educational paradigm. Like I said, from
12 California way, (inaudible) State University, to this
13 island, as I worked on -- in the trenches as a substitute
14 teacher, a local teacher for years as of the day.

15 The military provides one out of three jobs.
16 The military won't increase the firing ranges beyond
17 where they are currently utilizing firing ranges; so the
18 military won't increase firing range areas beyond where
19 they are currently utilizing fire ranges. Unexploded or
20 exploded ordnance will be limited to established firing
21 ranges.

22 The limitations and protections for indigenous
23 birds, elepaio, are good. Hawaiians utterly have a valid
24 concern regarding the protections of the sacred. And the
25 military says -- the military says, indeed, as I say,

1 from my truth, the heiau will be protected at Kahuku.

2 As I say, I really have greater faith -- I
3 really have greater faith in the dialogue than any person
4 purporting to be an ultimate authority: Anderson,
5 myself, Ms. Smith. These are complex questions. And
6 Jim Albertini and those who wish to limit militarism may
7 be very honorable persons, and I may share some of their
8 perspectives within limitations -- I mean, jokingly. Are
9 we, indeed, on the verge of World Gore III or World War
10 III?

11 And because -- right. Because my heart is so
12 heavy burdened, knowing as we sit and talk story at
13 Richardson Beach or Pohoiki, the stories of friends,
14 students, families, whom at this time, as we talk, are
15 putting their lives/limbs on the line so you all can go
16 there, pay back in for your incredibly inexpensive gas.

17 So honoring Justin M. from Waiakea High School,
18 Marine Corps, good Justin, good Justin. And Jerod, Pahoa
19 dagger, who has served in Iraq on his way to Nigeria, and
20 honoring the stories of the protectors, of the
21 protectors, of the protectors protecting the troops in
22 the trenches in Baghdad. Right. Well, maybe if we each
23 had to pay egalitarian-wise for our ability to speak, to
24 put our sandwich on the line, like Steve from Kanoe Clubs
25 Restaurant was willing to put his sandwich on the line to

1 support vets on leave instead of dependence on the great
2 conveniences of falsehood, well, we get the leaders and
3 the followers we deserve, perhaps.

4 So as I -- so I support the Pohakuloa Stryker
5 expansion plan -- so I support the Pohakuloa Stryker
6 expansion plan even though I've gotten additional
7 information this evening from Mililani Trask regarding
8 250 cultural artifact sites. I will seek additional
9 information about such. If the sites are protected,
10 Strykers seem about as hazardous to the land as braddahs
11 on ATVs.

12 Of course, every Hawaiian ought to have land and
13 infrastructure, of course. I'm for organic,
14 Constitutional civil liberties, dominion, sovereignty,
15 democracy, the only models of consciousness worth
16 orienting from. Stryker training ranges don't bother me.
17 What concerns me as to what adults we ought to be
18 concerned about as we attempt to make meanings. Caring
19 for the Justin Ms, like Jerod, as well as the Trents, the
20 Troys, the Josephs I've worked with, caring for students
21 I've known the stories of, who may be at adverse effects
22 of some of your unexamined belief systems. Well, let us
23 dialogue now and later. Examine your beliefs, what you
24 have believed about things, or examine my beliefs. The
25 Army at least has offered me an up-front forum for

1 dialogue in terms of overt and covert operations,
2 curriculums. The Army, they aren't subverting the
3 dominant paradigm of democratic civil liberties.

4 What methods are we to trust to accomplish our
5 various values and goals as adults?

6 The Army is not subverting the dominant paradigm
7 of democratic civil liberties. They are giving us a
8 forum to speak.

9 Protecting the aina is valid. Being a sounding
10 board like other mothers, with adults, friends, students
11 in the military is my avocation. As myself, haole,
12 kama'aina, wanna-be me, malahini, me -- who can say?
13 What can I say?

14 As I talk, as I listen variously, as this one
15 woman in paradise, as Hawaii is, it's not the Stryker
16 training area on Pohakuloa which concerns me greatest.
17 Any industry has its pluses and minuses for each American
18 individually and collectively. What I am concerned
19 about, listen to me or not, as students like (inaudible),
20 Lawrence, Ramooni, up at the portables at Pahoa High
21 School, are sometimes not such respectful listeners,
22 either. Well, like I said to Lawrence, tossing paper
23 bowls at me, this is not an anti-Arab training range,
24 this classroom with four square walls, this one
25 classroom, who was a good listener then -- who was a good

1 listener then. And I'm willing to be a sounding board to
2 an extent. One amongst other mothers, with adults in the
3 military. The protectors, the backup protectors,
4 protecting Jerod and Justin, Marine Corps Jerod and
5 Justin, are what I'm concerned about, the honorable
6 brothers. I'm concerned about them. Sure as Kalapana is
7 Kalapana, brothers, as we talk in Kalapana, are
8 Baghdad -- are brothers. Only something let them do
9 themselves. And I declare the charges are -- and I
10 decline -- I decline the charges at my expense of my
11 health. Let them do themselves -- let them pay for
12 themselves and be okay.

13 So I'm concerned not about the Strykers so much
14 as the fabric, the noetic science constructs, the
15 consensual reality we operate in. For myself, if I'm not
16 talking story, lib vet only, veteran of the liberal gory
17 story, does a veteran ever get the honor, mahalos,
18 appreciation one deserves? Really?

19 Well, I've digressed from the Stryker issues.
20 So, like others at this forum, I vented, not only for
21 myself, my well-being. I've digressed because I have a
22 valid concern, which is so subject to misinterpretation.
23 So I think the Army is behaving responsibly, will provide
24 jobs, will have reasonable limits, limiting ordnance to
25 areas where ordnance was previously exploded. Only, will

1 protecting sites of Hawaiian artifacts be sufficiently
2 well taken care of? I need more information about what
3 Mililani Trask said this evening. The dialogue, the
4 pidgin, the talking story is the answer, I hope. I only
5 silence myself now. From the (inaudible), mahalo for
6 your listening.

7 ***

8 9:47 P.M.

9 --o0o--

10 MR. JOSEPH WATTS: My name's Joseph Watts. I
11 just wanted to testify against the expansion of Pohakuloa
12 Training Area. As a taxpayer, I don't want more of my
13 money going towards weapons, and especially weapons that
14 are going to be tested and used in our islands, because
15 they're damaged enough already. I think the military
16 should be going and cleaning up all the ordnance already
17 here on the islands, and they could be exporting that
18 technology, because the rest of the world needs that kind
19 of stuff cleaned up all over the place.

20 The weapons industry is probably the largest
21 industry in the world, and that's because of our
22 United States of America and their helping to export it
23 everywhere. I think we should try to reverse this
24 process instead of making it even more worse by building
25 up our military even more.

1 We are not helping the world by going and
2 bombing other places, and we're not helping the islands
3 by bombing the islands; so please stop it. And let's
4 make the training area smaller, not larger.

5 Thank you.

6 ***

7 9:57 P.M.

8 --o0o--

9 MS. PRANA MANDOE: My name is Prana Mandoe. I
10 am born and raised on the island of Maui, currently a
11 resident of Hilo, of Caucasian ancestry. I support the
12 Hawaiian people in their quest for sovereignty. I
13 believe that the problem that is being discussed this
14 evening is the problem of American imperialism, which
15 began with the Massachusetts Bay Company arrival in the
16 Americas and continued with the conquest of the American
17 continent and through the Spanish-American War expanded
18 to the Pacific Islands. This has been a nation of
19 invaders. Also a nation of freedom and opportunity, and
20 my genealogy speaks to that. So we have a very mixed
21 plate.

22 However, I do not support any expansion of the
23 American military in any place in the Hawaiian
24 archipelago or in the world. I do not ask the military
25 to go do this somewhere else. I tell the military stop.

1 Stop destroying lands; stop destroying people; stop
2 bullying the nations of the world for their resources.
3 And begin to honor and support those who develop
4 alternative resources that can provide humanity with the
5 food and the comforts for life that we need and enjoy in
6 a non-destructive way.

7 Thank you.

8 ***

9 10:01 P.M.

10 --o0o--

11 MR. JOHN TURALDE: My name is John Turalde. I'm
12 47 years old. I'm 50 percent Hawaiian. And I'd like to
13 say, when I was a little boy and my playground was
14 Waikane, where the military took over the land over
15 there. And this was a playground, a swimming place, and
16 different sites where have some heiaus over there. And
17 that been gone for years, with the military walking and
18 marching from the Kaneohe Marine Base to Waikane. And
19 every day or every other day they march from the base to
20 Waikane. I hear footsteps, Army tanks, and truck tire
21 noise, enging noise, and passing our home every day. And
22 as they pass by, the road get destroyed every day. And
23 each every other day, when we go play up the mountain, up
24 in Waikane Valley, or down below, I look at the land, as
25 they bomb and as they training same time. And when they

1 off of training, that's when the only time we can go play
2 up there. And the land over there get destroyed. How
3 much land? Too much land. And whatever they leave back
4 when they leave, they leave everything back, and all the
5 shells and whatever left from the military. And I don't
6 think they should go back at Waikane mountain, the
7 valley, or down below or enter anyplace at Pohakuloa.

8 And, as for today, I'm living home in Hilo.
9 This is my residence, and my grandparents' birthplace on
10 the Big Island. And I think this is not good for the
11 land and for the people to breathe whatever air come down
12 from the mountains. All depends on the tradewinds, south
13 winds. Everybody get it, no matter what way the wind
14 blow. South wind, north wind, and east winds, everybody
15 get to breathe that air that should be good for us. Or
16 maybe one day we might not be around, as long as we live
17 as the age we supposed to live. And I don't think this
18 military don't deserve to come over here, because we have
19 enough military over here.

20 Thank you.

21 (More proceedings were had on the following page.)

22 / / /

23 / / /

24 / / /

25 / / /

1 --oOo--

2 10:30 p.m.

3 MR. RAGU: My name is Ragu. I gave an introduction
4 in which I said that the -- that the military is sort of
5 dealing with an equivalent of a cultural gap that the U.S.
6 Military would find itself in if it was in another country,
7 and that if they can't take care of that cultural gap here,
8 they don't stand much of a chance in another more
9 inhospitable place like in Iraq, and that the military is
10 increasingly being used to fill in a diplomatic and
11 political void which it wasn't cut out to do, but it's now
12 in the hot seat being nice to people, for example.

13 And so in Iraq, it was there to secure the peace
14 when, in fact, the U.S. Military was really intending to
15 win a war, so now they have this overlapping mission that
16 it really wasn't set up for, but they're getting blamed for
17 not doing.

18 So that would come down to four things that I think
19 would help in that front. The first is a cultural finesse.
20 And the military is taking the time and money to train
21 their soldiers how to deal with different geographical
22 terrains, whether it's deserts or rainforests or mountains,
23 but they're increasingly finding themselves or rather the
24 majority of what the military is actually doing is finding
25 itself in other countries in a mission of peace-time

1 activity.

2 And so the more cultural savvy they can become with
3 the place, the better that they'll be able to interface and
4 the more effective they'll be at carrying on their task,
5 and the cultural savvy comes from a familiarity within the
6 cultures. Hawaii happens to be one, and if they can take
7 the time now, three days, five days, even ten days getting
8 a sense of the language, the customs, the geography, the
9 food, the language, it would be a good practice run for
10 soldiers to learn why they're abroad.

11 The second one is keeping their word. The problem
12 the military has is that they've been put into places to
13 carry on a military operation, and suddenly they find
14 themselves having to deal with sort of civilian concerns,
15 such as environmental impacts and things like that which
16 really isn't a military consideration, but now that they're
17 playing a larger political role, it is no longer an
18 environmental issue, but a very important political issue.
19 I mean, a public relations issue. Oh, I'm sorry, that's
20 for the environment.

21 For keeping their word, it's that many people suspect
22 that if the military asks for one thing, it's simply to
23 give them a foothold to be able to do a lot more or
24 inevitably it will include a lot more than what they ask
25 for. So, if they can keep it down to what they are asking

1 for, that would really help build a stronger sense of
2 credibility, because they always seem to take, you know --
3 take an inch and they literally take a mile.

4 The second one -- the third one was the environment.
5 That it's not an environmental issue, it's a public
6 relations issue, and especially, with things like the
7 munitions. You've got munitions unexploded around the
8 public or toxic waste.

9 And the last one is meetings. They're a real
10 aggravation. These poor guys have been sitting there for
11 ten hours, while all those speakers get to come and go.
12 They have to sort of sit there, and, you know, they're a
13 punching bag. However, if their interest is to be able to
14 keep on top of their winning-the-peace training, the
15 training ground for that is these public forums, and so
16 sitting in the hot seat will keep them on the learning
17 curve of the cultural PR.

18 Thanks. That's it.

19 --oOo--

20 12:35 p.m.

21 LISA CABAK: Lisa Cabak. I'm a guest on this island
22 here for only three weeks so far. I came to the Big Island
23 to do two stories as a freelance writer, to explore
24 opportunities for both volunteering and healing retreats,
25 alternatives for sustainable tourism. Through this I hope

1 to find the real aloha spirit and to share what I find with
2 my readers.

3 This week I'm volunteering at Mauna Aina, land of
4 peace, digging up sweet potatoes, harvesting green beans,
5 and most importantly working the two main crops, peace and
6 justice as Jim Albertini would say.

7 I was the one who took the call from the police
8 captain Jim spoke about. "I just wanted to know if
9 Mr. Albertini was planning on being arrested at the
10 hearings this week?" He asked. I was shocked, to say the
11 least. I replied, "No, I don't think he's planning on
12 being arrested."

13 On the way to the University, I asked Jim, "I'm not
14 going to be arrested if I go to the hearings, will I?" I
15 really didn't know. Arriving here tonight, seeing all of
16 the officers lined up in front of the hotel, I felt a
17 tenseness immediately. The air was thick. I walked up to
18 an officer and asked him casually, "If I hold up a sign,
19 I'm not going to be arrested, right?" His reply merely
20 stopped me cold. "Do you want to be arrested?" He asked.
21 "No," I said. "I've never protested before." Well, he
22 said, "Some people want to get arrested." And I was like,
23 "What?" Then he said, almost under his breath with a wave
24 of his hand, "I don't want the military in Pohakuloa
25 either."

1 The Aloha spirit is alive and well in this room
2 tonight and I feel blessed to be a part of this, and I'm
3 thankful that I'm not going to jail tonight.

4 When the military brat, in quotes, said there was
5 nothing we could do, for a moment my heart sank, and I felt
6 he was right, but I'm glad to be a part of a group that I
7 believe, we all believe, this is not a done deal and it
8 doesn't have to happen. That's it.

9 (End of breakout session.)
