

CECOM

INFORMATION SYSTEMS ENGINEERING COMMAND

Mission

USAISEC engineers high-priority, strategic, and operational C5ISR solutions to enable the Army Digital Transformation.

Vision

A well-trained, well-resourced, properly organized team that provides modern and resilient C5ISR systems engineering support worldwide.

Portfolio

Army Installation Resiliency

Ensure turn-key IT / OT delivery that provides in-sourced, quick reaction force to enhance readiness and operational effectiveness.

Army Organic Industrial Base Modernization

Conduct OIB site assessments and provide industrial control network engineering design.

Army Metering Program

Provide support for cybersecurity engineering for DoW Energy Sustainment Solutions to ensure EXORD 028-12 utility metering standards.

Communications Security

Provide operational support to defend the Army's information, enable decisive command and control, and secure Information dominance.

PM IEN Voice Modernization

Integrate VoIP and Teams soft clients to replace analog phones and accelerate time-division multiplexing elimination.

Defense Health Agency Network Modernization

Conduct the network modernization for DHA to provide care for military members and their families worldwide.

Global Presence

Business Model

- Utilize a fee for services model: 80% reimbursable / 20% direct.
- Provide low volatility and adapt our mission to fit customer priorities (unbiased, objective, independent, external view).
- Align vertically with regulatory requirements: AR 420-1 and AR 350-19 for military construction and AR 95-2 for air traffic control.
- Perform inherently government tasks contractors cannot perform, such as engineering oversight, quality assurance, verification and validation, contracting officer representation, and technical monitoring on location.

Processes

- Proven Project Leadership:** Follow established organizational standards and processes to lead projects effectively, ensuring cost efficiency, optimal performance, and on-time delivery.
- Scalable Implementation Expertise:** Implement large-scale projects utilizing the Total Engineering and Integration Services contract vehicle to deliver seamless integration and reliable results.
- Advanced Integration Test Facilities:** Test and validate network designs, system components, and configurations, ensuring robust and secure solutions utilizing our Technology Integration Center.
- Rapid Response Capability:** Provide agile and scalable support to meet urgent requirements, including rapid resource ramp-up and deployment of trained personnel to address mission-critical needs.
